Re: ODE Financial Interest in Aqua Safe Residential Treatment Units

Old Dominion Engineering, its owners, family members of owners, employees, family member of employees have no financial interest or stake whatsoever in the results of the VDH certification process of the Aqua Safe Residential Treatment Units by ETI. As a professional engineer I am bound by a code of ethics and I will and all employees under my supervision will perform all work on this certification in an impartial manner. We view this certification as a matter of public health which we take very seriously.

The Aqua Safe unit has passed our internal vetting process and is currently being specified by our company on residential designs for those lots and conditions we deem suitable. Our designs for residential systems are prepared according to the specific requirements of lot geometry, soil conditions, dispersal mechanisms, owner characteristics, contractor qualifications, and other criteria. We specify and design a variety of treatment units including FAST, Advantex, peat filters, sand filters, recirculating gravel filters, horizontal flow constructed wetlands, vertical flow recirculating constructed wetlands, conventional septic systems and dispersal technologies including trench, pad, drip, mound, and discharge. We do not accept money from unit manufacturers to specify their units.

Please do not hesitate to call if you have any questions.

Sincerely,

A handwritten signature in black ink, appearing to read 'Michael Craun', written over a light blue horizontal line.
