

Waa maxay baarista TB-da ee jirka (maqaarka)?

Baarista qaaxada (TB-da) waa baaritaanka jirka (maqaarka) oo kaliya!

Sidee baarista loo sameeyaa?

Waxaa la isticmaalaa cirbad yar oo lagu duro maqaarka gacanta, oo ay ku jirto walax baarista la yiraahdo tuberculin. TB-da kama qaadi kartid walaxda baaristan. Waa in aad ku soo noqotaaa muddo 2 ilaa 3 maalmood ah, si shaqaala caafimaadku uu u fiiriyo gacaantaada.

Maxay natiijadaydu macnaheedu tahay?

Haddii ay gacanta ku soo yar bararto, waxaa laga yaabaa in baaristu tahay hubaal “**boosatifo**”. Shaqaalaha caafimaadku ayaa go’aaminaya in cudurka qaaxada aad qabto marka ay cabiraan inta bararku la egyahay. Haddii baarista ay cadeyso in cudurka aad qabto oo “boosatifo” aad tahay, waxaad u baahantahay baaris dheeraad ah, sida raajada feeraha , si loo ogaado in uu ku hayo cudurka qaaxada ama aad la bugto.

Hadii natiijadu aanay hubaal ahayn “**negatiifo**”, oo gacantu aysan ku soo bararin, cudurka TB-da ma qabtid. Tani macnaheedu waxay tahay in laga yaabo in jirkaada uusan ku jirin jeermiska TBda.

LAAKIIN, laga yaabee inaad u baahan tahay baaritaan kale, haddii aad ka ag dhawayd qof la jiran cudurka qaaxada ama tiibishada.

- Baaritaanka jirka ee ee cudurka qaaxada waxaa loo sameeyaa si loo ogaado jeermiga cudurka qaaxada ee jirkaada ku jiro.
- Baarista jirka kuma ogaan kartid haddii uu ku hayo cudurka qaaxada.
- Haddii baaritaanka jirka (maqaarka) laga helo cudurka qaaxada ama tiibishada waxaad u baahan doontaa baaritaanno kale.

Sideen ku bartaa in ka badan?

Waxa aad weydiisa dhakhtarkaaga ama kal-kaaliye. Weeydii takhtarkaaga ama kaaliyaha. Waxa aad wacda waaxda caafimaadka xaafadaada ama waaxda caafimaadka gobolka.
