

Zika Virus Prevention Tips

The summer is here which means pests are here, too! It is important to take necessary precautions to protect your home and your health from pests, like mosquitos. Check out these tips to protect you from the Zika virus infection.

1. Eliminate standing water from containers in yards (including bird baths, flower pots, buckets, etc.) to stop mosquitoes from breeding.
2. Wear long-sleeved shirts, long pants and socks.
3. Stay indoors in air-conditioning and screen windows and doors to keep mosquitoes outside.
4. Use insect repellent or permethrin-treated clothing.

Look for places in your yard where water collects and empty them to prevent mosquitoes from breeding in stagnant water.
