Surveillance Team: syndromic@vdh.virginia.gov**

Background

The Virginia Department of Health (VDH) currently receives data on visits to 77[§] acute care hospital emergency departments (EDs) and 13 free-standing EDs in Virginia for purposes of public health surveillance. The purpose of this report is to characterize ED visit trends for acute unintentional overdose by opioids and heroin among Virginia residents.

Chief complaints and discharge diagnoses of ED visits are analyzed by VDH to identify and monitor issues of public health concern across Virginia. The chief complaint is a free-text field that captures the patient’s primary reason for seeking medical care as interpreted by the ED registration staff. The discharge diagnosis is a coded field that uses standardized values outlined by the International Classification of Diseases (ICD) 9th and 10th Revision code sets.

Methodology

ED visits that are identified as **unintentional overdose by opioid or unspecified substance** include those with medical and non-medical use of a prescription opioid or where the substance is not specified, given evidence that the majority of fatal overdoses are opioid-related.¹ These visits must meet the following inclusion and exclusion criteria:

- Inclusion terms from Chief Complaint or Discharge Diagnosis: *overdose, OD, sobredosis, opioid, opiate, opium, narcotic, Narcan, naloxone, E850.1, E850.2, 965.00, 965.02, 965.09, 977.9, T40.0X1, T40.0X4, T40.2X1, T40.2X4, T40.3X1, T40.3X4, T40.4X1, T40.4X4, T40.601, T40.604, T40.691, T40.694, T50.901, T50.904*
- Exclusions terms from Chief Complaint or Discharge Diagnosis: *heroin, herion, heron, 965.01, T40.1X, suicide, alcohol overdose alone, withdrawal, detoxification, rehab, addiction, dependency, mental health or psychological evaluation, allergies, constipation, chronic pain, refill requests, and any specified non-opioid drug or medication*

ED visits that are identified as **unintentional overdose by heroin** must meet the following inclusion and exclusion criteria:

- Inclusion terms from Chief Complaint or Discharge Diagnosis: *heroin, herion, 965.01, E850.0, T40.1X1A, T40.1X4A*
- Exclusions terms from Chief Complaint or Discharge Diagnosis: *suicide, withdrawal, detoxification, rehab, and addiction*

These criteria were revised in September 2016 and again in August 2017 in order to improve specificity in the identification of ED visits for unintentional drug overdose. Readers are strongly encouraged to review [syndromic surveillance data limitations](#) when interpreting this report.

ED visits for unintentional overdose by opioid or unspecified substance and heroin are presented by count or rate per 100,000 population. Rates are calculated using U.S. Census Bureau 2016 population estimates. To protect confidentiality and maintain accurate rate calculations, ED visit counts of 1 to 4 and rates with numerators of 1 to 4 are suppressed in this report. Counts of 0 are included.

The geographic location is assigned based on the patient’s residential zip code provided. A single zip code may span multiple city and county localities in Virginia. If a patient resides in such a zip code, the visit is assigned to the locality where the majority of the population resides. Places where the Virginia city and county populations have been combined to calculate a rate per 100,000 population due to zip codes spanning multiple localities can be found in [Appendix 1](#).

§ Between May and June 2017, fluctuations in reporting to VDH were observed. Before June, 82 acute care hospital EDs and 13 free-standing EDs submitted data. In June, one healthcare system in the Eastern Health Planning Region became unable to provide data. As a result, 77 out of an expected 82 acute care hospital EDs and 13 free-standing EDs reported data for June; any observed decreases in the count or rate of overdoses in the Eastern Region might be artificially low because of this change in reporting. Additionally, one acute care hospital ED in the Northwest Health Planning Region improved its data quality during June so that visits can be attributed to overdoses more accurately, thereby increasing the counts for that area. Please consider these changes in reporting when interpreting the contents of this report.

Highlights for July 2017

Statewide ED visits for overdose by opioid or unspecified substance among Virginia residents decreased by 3.6% from June (749 visits) to July 2017 (718 visits).

- Among the 5 [VDH health planning regions](#), visits for overdose by opioid or unspecified substance decreased in the Eastern (38 fewer visits, 26%), Southwest (25 fewer visits, 15%) and Northern regions (22 fewer visits, 15%). Visits increased in the Central (49 additional visits, 32%) and Northwest regions (9 additional visits, 7%). The Central region observed the highest rate (14.2 per 100,000 population) in July 2017.
- By sex, there was no difference in the proportion of visits for overdose by opioid or unspecified substance between females and males. Visits decreased among both females (17 fewer visits, 4%) and males (10 fewer visits, 3%).
- By age group, visits for overdose by opioid or unspecified substance decreased among those aged 65+ years (8 fewer visits, 13%), 55-64 years (8 fewer visits, 9%), 35-44 years (8 fewer visits, 7%) and 45-54 years (2 fewer visits, 2%).

Statewide ED visits for overdose by heroin among Virginia residents decreased by 9.5% from June (168 visits) to July (152 visits). However, the overall trend has shown an increase in visits (Figure 2B).

- Among the 5 [VDH health planning regions](#), visits for overdose by heroin decreased in the Southwest (19 fewer visits, 63%) and Eastern regions (15 fewer visits, 26%). Visits increased in the Central (16 additional visits, 100%) and Northwest regions (2 additional visits, 6%). There was no change in the Northern region.
- By sex, males have contributed significantly (p -value $<.05$) more visits for overdose by heroin compared to females since October 2016. Visits decreased among both males (11 fewer visits, 9%) and females (5 fewer visits, 10%) between June and July 2017.
- By age group, visits for overdose by heroin decreased among those aged 25-34 years (29 fewer visits, 39%) and 35-44 years (10 fewer visits, 25%). An increase was observed for those aged 55-64 years (8 additional visits, 53%) and 45-54 years (8 additional visits, 50%). Despite the decrease in visits, the highest visit rate continues to be observed in those aged 25-34 years (3.9 per 100,000 population).

Emergency Department Visits for Unintentional Overdose by Opioid or Unspecified Substance among Virginia Residents

Figure 1A. Count of ED Visits for Unintentional Overdose by Opioid or Unspecified Substance among Virginia Residents by Month, 2015 - 2017.

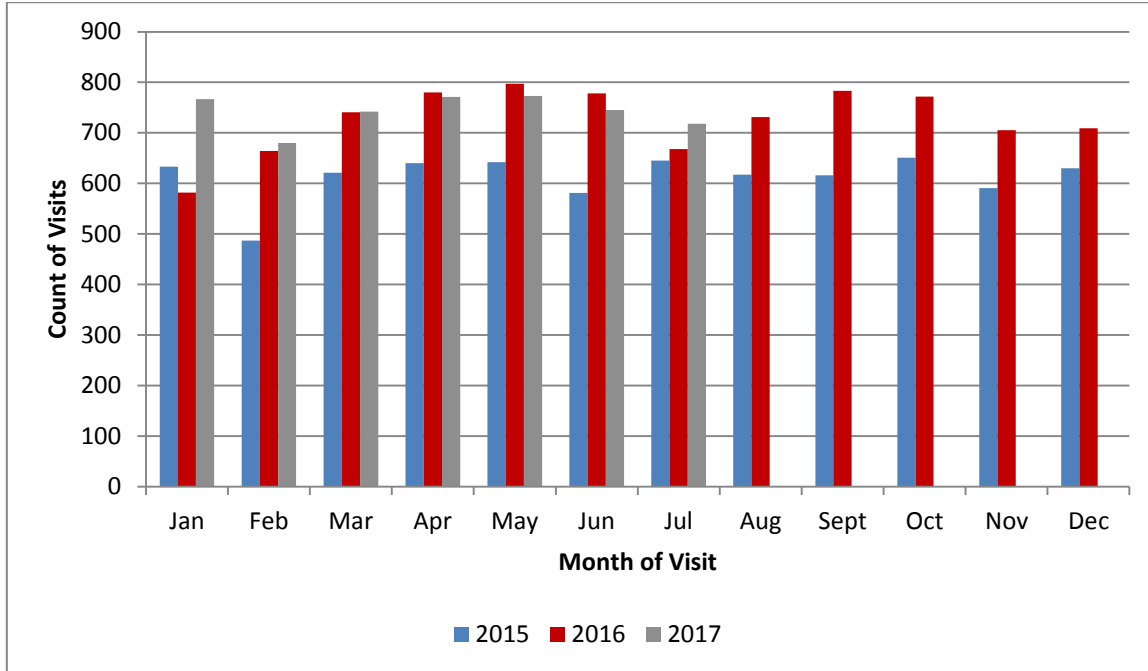

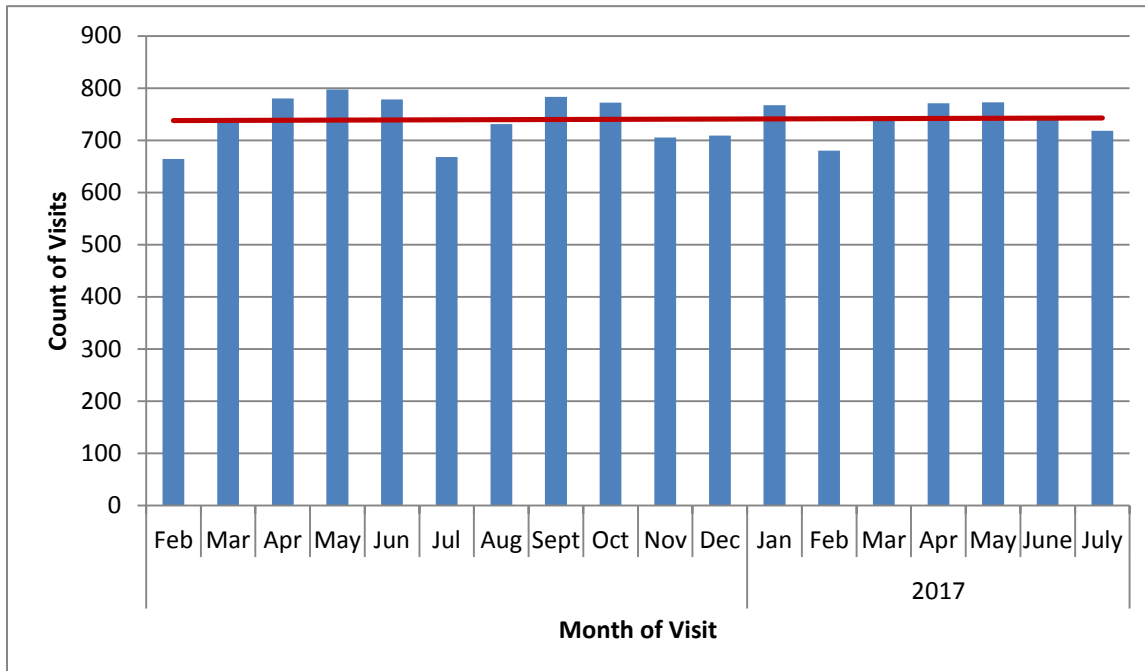

Figure 1B. Count of ED Visits for Unintentional Overdose by Opioid or Unspecified Substance among Virginia Residents by Month with Line of Best Fit, Previous 18 Months.

Note: A line of best fit is used to identify a trend in the relationship between two variables.

Appendix 1

Virginia Localities that were Combined for the Purposes of Calculating Rate per 100,000 Population

- Alleghany County and Covington City
- Albemarle County and Charlottesville City
- Augusta County, Staunton City, and Waynesboro City
- Chesterfield County and Colonial Heights City
- Frederick County and Winchester City
- Fairfax County, Fairfax City, and Falls Church City
- Grayson County and Galax City
- Greensville County and Emporia City
- Henry County and Martinsville City
- Montgomery County and Radford City
- Pittsylvania County and Danville City
- Prince George County, Hopewell City, and Petersburg City
- Prince William County, Manassas City, and Manassas Park City
- Roanoke County, Roanoke City, and Salem City
- Rockingham County and Harrisonburg City
- Rockbridge County, Buena Vista City, and Lexington City
- Southampton County and Franklin City
- Washington County and Bristol City
- Wise County and Norton City
