AVOID MOSQUITOES

PROTECT YOURSELF AND YOUR FAMILY

🌟 Wear long, loose and light-colored clothing.
🌟 If possible, stay indoors when mosquitoes are biting.
🌟 Repellent products containing DEET and Picaridin typically provide longer lasting protection than others. Oil of lemon eucalyptus, a plant-based repellent, provides protection similar to lower concentrations of DEET.
🌟 Use insect repellent products with the smallest percentage of DEET necessary for the amount of time you are exposed to mosquitoes, but no more than 50% for adults and 30% for children under 12. Follow product instructions. Adults should apply repellent on children and avoid applying the product to children’s hands.
🌟 Spray repellent on your hands and then apply to your face. Do not apply to eyes or mouth, and apply sparingly around ears.
🌟 Only apply repellent to exposed skin and clothing. Do not use repellent under clothing. If repellent is applied to clothing, wash treated items before wearing again.
🌟 Do not apply repellent over cuts, wounds, sunburn, or irritated skin.
🌟 Wash repellent off daily and reapply as needed.

PREVENT MOSQUITOES FROM BREEDING

🌟 Turn over or remove containers in your yard where water collects, such as old tires, potted plant trays, boats, buckets and toys.
🌟 Clean out birdbaths and wading pools once a week.
🌟 Clean roof gutters and downspout screens regularly.
🌟 Eliminate standing water on tarps and flat roofs.
🌟 Do not leave garbage can lids upside down or allow water to collect in your garbage can.
🌟 Make sure all window screens are in good repair without holes in them.

Mosquitoes may carry potentially dangerous viruses, such as West Nile virus.
