Congratulations on the birth of your baby!
The facility where your baby was born conducted a newborn hearing screening.

Your baby failed with risk of developing late onset hearing loss. Since language development begins at birth, it is recommended that:

- Your baby is screened by one month of age. If your baby failed more than one screening, IMMEDIATELY schedule a diagnostic hearing evaluation with a pediatric audiologist.
- Visit EHDIPALS.org to find a pediatric audiologist or contact Virginia Early Hearing Detection & Intervention at VA_EHDI@vdh.virginia.gov.
- Recommendation for late onset hearing loss: Schedule a diagnostic hearing evaluation with a pediatric audiologist between ages 12 to 24 months.

Milestones to Monitor

Birth to 3 months old:
- Blinks or jumps when there is a sudden, loud sound
- Quiets or smiles when spoken to
- Makes sounds like “ooh” or “ahh”

6 to 9 Months Old
- Turns head toward sounds
- Understands “no-no” or “bye-bye”
- Makes babbling sounds (“baba,” “mama,” “gaga”)

3 to 6 Months Old
- Looks for sound with eyes
- Recognizes parent’s voice
- Uses many sounds, squeals and chuckles

9 to 12 Months Old
- Repeats simple words and sounds
- Correctly uses “mama” or “dada”
- Responds to singing or music
- Points to favorite toys and objects when asked
