Influenza (flu) is a contagious disease that can be serious. Every year, millions of people get sick, hundreds of thousands are hospitalized, and thousands to tens of thousands of people die from flu. CDC urges you to take the following actions to protect yourself and others from flu.

**A yearly flu vaccine is the first and most important step in protecting against flu viruses.** Everyone 6 months or older should get an annual flu vaccine. Protect yourself. Protect your family. Get vaccinated.

Take everyday preventive actions to help stop the spread of flu viruses! Avoid close contact with sick people, avoid touching your eyes, nose, and mouth, cover your coughs and sneezes, wash your hands often (with soap and water).

Take antiviral drugs if your doctor prescribes them! Antiviral drugs can be used to treat flu illness and can make illness milder and shorten the time you are sick.

**CALL TO GET A FLU VACCINE**
