7.0 APPENDIX 20
  7.1 Census population estimates by age and race—Richmond City and Henrico County 20
KEY TAKEAWAYS

- According to the VDH Pandemic Metrics Dashboard, the Central Region is still experiencing a high burden of cases and a substantial activity level, but with a decreasing trend in cases. As of March 8, the daily case incidence rate in Richmond was 12.0 cases per 100,000, a decrease from last week’s rate of 21.9. Percent positivity for the locality is 5.3% and decreasing. In Henrico, the daily case incidence rate is 14.7 cases per 100,000, a decrease from last week’s rate of 21.5. Percent positivity for the locality is 6.2% and decreasing.

- Cases in both districts continue to decrease. Compared to last week, based on VEDSS data by date, cases in Richmond dropped from a 7-day average of 21.9 to 12.0 average daily new cases per 100,000 population. In Henrico, cases dropped from 21.5 to 14.7 new cases per day, per 100,000.
  - Regarding subgroups, in Richmond, males comprise a higher proportion of cases compared to females, based on data from the past month. Females still comprise a higher proportion of cumulative cases. In Henrico, females still comprise a higher proportion, both cumulatively and in the past month. Regarding the proportion of cases by age group 20-29 year olds continue to be in the lead in Richmond, both cumulatively and in the last 4 weeks. In Henrico, 20-29 year olds continue to lead, though closely followed by 50-59 year olds. Regarding race and ethnicity, in Richmond, the highest proportion of cases is still among Black individuals, again both cumulatively and in the last 4 weeks. In Henrico, both cumulatively and in the last 4 weeks, the proportion of cases is highest among White individuals. The proportion of cases for which race/ethnicity is unreported continues to decrease, with 19.6% unreported in Richmond and 16.7% in Henrico based on data from the past month.

- Among the 11 hospitals that comprise the Richmond catchment area, hospitalizations have declined, though ICU hospitalizations are fluctuating and the use of ventilators has tapered off after an increase at the end of February. All 11 hospitals are operating at a normal clinical status. Additional data is available on the VHD Dashboard. Hospitalizations by subgroup (sex, age, and race) are reported on a monthly basis.

- A substantial number of COVID-19 deaths have been reported recently, with dates of death ranging from late December to mid-February. Additional death data is available on the VHD Dashboard. New trends still show a decline in deaths in both districts. Deaths by subgroup (sex, age, and race) are reported on a monthly basis.

- Richmond and Henrico Health Districts are currently in Phase 1B of vaccination. Eligible people include healthcare workers, people living and working in long-term care facilities, front-facing essential workers, and people over the age of 65. As of March 8, 2021, 16.7% of the region’s population has received at least one dose of the vaccine. 8.9% of the region’s population has been fully vaccinated. 15.5% of Richmond and Henrico’s combined population has received at least one dose. 8.3% of the two districts combined population has been fully vaccinated. The majority of vaccine recipients in both districts have been female. The highest counts have been among 60-69 year olds in Richmond and 70-79 year olds in Henrico. Available data indicate that eligible White individuals have received the majority of the vaccine, but a large percentage of recipients’ race/ethnicity is still unreported.

Weekly cases added are estimated as the difference between the cases recorded from the current and prior week.

Case Rate per 100,000 = (confirmed + probable)/population count *100,000.

Population estimates for the case rate are the most recent as of July 1, 2019 from the U.S Census Bureau QuickFacts.
1.2 Current COVID-19 hospitalizations in the Richmond catchment area on March 8, 2021

The data included in this section comes from VHASS and it includes data from the following hospitals: VCU Health System, Retreat Doctors’, Bon Secours Community, CWJ Chippenham, CWJ Johnson Willis, VA Medical Center, Bon Secours St. Mary’s, Henrico Doctors, and Parham Doctors, Bon Secours St. Francis, and Memorial Regional Medical Center.

</tbody>
</table>

*Counts <5 have been suppressed

Within these 11 hospitals that comprise the Richmond catchment area, there are currently 45 available adult ICU beds, and 460 available ventilators. Based on the VHASS hospital dashboard on February 22nd, 2021, all 11 hospitals are operating at normal clinical status.**

**A clinical status of “normal” indicates that hospital clinical resources are operating within normal conditions. A clinical status of “full” indicates that hospital clinical resources are exceeded and acceptable care cannot be provided to additional patients. Diversion or Community surge response is required.

2.0 COVID-19 testing encounters and positivity

3.0 COVID-19 CASES
3.1 SUMMARY OF CASES

Cases
Cases in both districts continue to decrease. Compared to last week, based on VEDSS data by date, cases in Richmond dropped from a 7-day average of 21.9 to 12.0 average daily new cases per 100,000 population. In Henrico, cases dropped from 21.5 to 14.7 new cases per day, per 100,000.

Case Demographics
In Richmond, males comprise a higher proportion of cases compared to females, based on data from the past month. Females still comprise a higher proportion of cumulative cases. In Henrico, females still comprise a higher proportion, both cumulatively and in the past month. Regarding the proportion of cases by age group 20-29 year olds continue to be in the lead in Richmond, both cumulatively and in the last 4 weeks. In Henrico, 20-29 year olds continue to lead, though closely followed by 50-59 year olds. Regarding race and ethnicity, in Richmond, the highest proportion of cases is still among Black individuals, again both cumulatively and in the last 4 weeks. In Henrico, both cumulatively and in the last 4 weeks, the proportion of cases is highest among White individuals. The proportion of cases for which race/ethnicity is unreported continues to decrease, with 19.6% unreported in Richmond and 16.7% in Henrico based on data from the past month.
3.2 CASE REPORTS TRENDS BY DATE (SOURCE-VDH WEBSITE)

The report date corresponds to the date the case count was reported publicly. The report date does not have any equivalent variable in VEDSS, and cannot be directly linked to case-specific dates (e.g., event dates or lab report dates). Case counts by report date are estimated by subtracting the cumulative cases on the previous day from that of the current day. The 7-day moving average is a recurrent average of the number of cases for each 7-day data sequence.

<table>
<thead>
<tr>
<th>Number of New Cases Reported</th>
<th>7-Day Average Number of Daily New Cases Reported</th>
<th>7-Day Average Number of New Daily Cases Reported, Rate per 100,000 Population</th>
<th>Total Number of New Cases per 100,000 Population within last 14 days</th>
</tr>
</thead>
<tbody>
<tr>
<td>20</td>
<td>27</td>
<td>12.0</td>
<td>236.9</td>
</tr>
</tbody>
</table>

In Richmond, the 7-day average number of daily new cases reported this week appears to be decreasing over the last few weeks. A total of 20 new cases were reported on March 7, 2021, with a 7-day average of 27 new daily cases per 100,000 population.

In Henrico, new cases reported per day also appear to be decreasing. A total of 33 new cases were reported on March 7, 2021 with a 7-day average of 48 daily cases per 100,000 population, compared to 81 new cases and a 7-day average of 30.9 a week ago.
3.3 CASES BY SEX BY COUNTY

All percentages are based on overall case distribution, rather than the proportion of known cases for each measure, and therefore may not correspond directly with VDH percentages.

- In Richmond, males now comprise a higher proportion of cases relative to females in the last 4 weeks (54.5% vs 44.4%), but females comprise a higher proportion cumulatively (51.5% vs 47%).

- In Henrico, females comprise a much higher proportion of cases relative to males both in the last 4 weeks (50.2% vs 48.9%) as well as cumulatively (53.2% vs 45.2%).
In Richmond, individuals aged 20-29 (30.5%) still comprise the overwhelmingly highest number of cases in the last four weeks, followed by individuals aged 30-39 years (15.4%).

In Henrico, individuals aged 20-29 (16.3%) comprise the highest number of cases followed by individuals aged 50-59 (15.7%) in the last four weeks.
### 3.5 Cases and Population Proportions by Race and Ethnicity by County

Population estimates for the Race and Ethnicity subgroup analyses are from the 2018 ACS 5-year estimates.

**COVID-19 case distribution by Race and Ethnicity in the last 4 weeks**

(Feb 2 – Mar 7, 2021) — Richmond, City, VA (N=1207)

- **In Richmond**, the case burden for Black individuals over the last 4 weeks (58.3%) is disproportionately high relative to their population percentage (47.5%), while the case burden for White individuals is disproportionately low both in the last four weeks (29.3%) and cumulatively (30.7%) relative to their population percentage (40.4%). While the cumulative case burden for Latino individuals (16.3%) is disproportionately high compared to their population percentage (6.7%), however the case burden over the last four weeks for Latino individuals has been much lower (6.9%).
In Henrico, the case burden for Black individuals over the last 4 weeks (38.5%) and cumulatively (36.6%) is disproportionately high relative to their population percentage (29.4%). The case burden for White individuals has been disproportionately low over the last four weeks (44.4%) and cumulatively (42.2%) relative to their population percentage (53.7%). While the cumulative case burden for Latino individuals (10.6%) is disproportionately high compared to their population percentage (5.5%), the case burden for Latino individuals over the last four weeks is 7.2%.
4.0 COVID-19 HOSPITALIZATIONS

4.1 SUMMARY OF HOSPITALIZATIONS

Based on VEDSS data, hospitalizations among Richmond and Henrico patients appear to be plateaunig with minor fluctuations over the past 4 weeks (see VDH Dashboard for additional trend data). Looking more broadly at the 11 hospitals that comprise the Richmond catchment area, hospitalizations have declined, though ICU hospitalizations are fluctuating and the use of ventilators has tapered off after an increase at the end of February. All 11 hospitals are operating at a normal clinical status.

Hospitalizations by subgroup (sex, age, and race) are reported on a monthly basis.

4.2 HOSPITALIZATIONS (CONFIRMED AND PENDING) BY DAY IN THE RICHMOND CATCHMENT AREA AS OF MARCH 7, 2021

* Data points from March until September 2020 are excluded to allow for clarity in trends/patterns.

- Data from the 11 hospitals included in this analysis suggests a recent decrease in overall hospitalizations, following a noticeable increase throughout the month of December, and a plateau during the month of January. Generally, hospitalizations seem to be trending downward.
4.4 ICU HOSPITALIZATIONS (CONFIRMED AND PENDING) BY DAY IN THE RICHMOND CATCHMENT AREA AS OF MARCH 7, 2021

Following a recent plateau and mild fluctuations, ICU hospitalizations have been decreasing overall throughout the month of February and early March.

4.5 VENTILATOR UTILIZATIONS (PATIENTS ON VENTILATORS) BY DAY IN THE RICHMOND CATCHMENT AREA AS OF MARCH 7, 2021

Ventilator utilization fluctuated throughout December, and despite peaks towards the end of January, appears to be decreasing overall during the month of February and early March.
5. COVID-19 FATALITIES

5.1 SUMMARY OF FATALITIES
A substantial number of COVID-19 deaths have been reported recently, with dates of death ranging from late December to mid-February. New trends still show a decline in deaths in both districts. Additional death data is available on the VHD Dashboard. *Deaths by subgroup (sex, age, and race) are reported on a monthly basis.*

6.0 VACCINATION

6.1 VACCINE SUMMARY
Richmond and Henrico Health Districts are currently in Phase 1B of vaccination. Eligible people include healthcare workers, people living and working in long-term care facilities, front-facing essential workers, and people over the age of 65. Vaccine supply and distribution are summarized in the tables below.

As of March 8, 2021, 16.7% of the region’s population has received at least one dose of the vaccine. 8.9% of the region’s population has been fully vaccinated. 15.5% of Richmond and Henrico’s combined population has received at least one dose. 8.3% of the two districts combined population has been fully vaccinated.

The majority of vaccine recipients in both districts have been female. The highest counts have been among 60-69 year olds in Richmond and 70-79 year olds in Henrico. Available data indicate that eligible White individuals have received the majority of the vaccine, but a large percentage of recipients’ race/ethnicity is still unreported.

We have set a goal of vaccinating 75% of the population to reach herd immunity. First and second doses of the Pfizer vaccine must be administered at least 21 days apart. First and second doses of the Moderna vaccine must be administered at least 28 days apart.

6.3 WEEKLY TOTALS BY VACCINATION PATHWAY FOR RICHMOND AND HENRICO - SOURCE: INTERNAL TRACKING, VIIS

Health system totals reflect Richmond and Henrico residents who were vaccinated at one of the hospitals in the Richmond hospital catchment area - VCU Health System, Retreat Doctors’, Bon Secours Community, CWJ Chippenham, CWJ Johnson Willis, Bon Secours St. Mary’s, Henrico Doctors, and Parham Doctors, Bon Secours St. Francis, and Memorial Regional Medical Center. VA Medical Center is included in the COVID-19 hospitalization section of this report but vaccination data for this hospital is not yet available in VIIS.
6.4 VACCINE DISTRIBUTION BY DEMOGRAPHIC SUBGROUP – SOURCE: VIIS

**Total Vaccine Recipients by Sex in Richmond**
-- March 7, 2021 (N=25805)

- Female: 38.1%
- Male: 61.7%
- Not Reported: 0.2%

**Total Vaccine Recipients by Age Group in Richmond**
-- March 7, 2021 (N=25805)

- 10-19: 85
- 20-29: 9148
- 30-39: 4054
- 40-49: 2571
- 50-59: 2916
- 60-69: 5316
- 70-79: 5196
- 80+: 2519

**Total Vaccine Recipients by Sex in Henrico**
-- March 7, 2021 (N=62185)

- Female: 36.3%
- Male: 63.6%
- Not Reported: 0.1%

**Total Vaccine Recipients by Age Group in Henrico**
-- March 7, 2021 (N=62185)

- 10-19: 264
- 20-29: 4766
- 30-39: 7197
- 40-49: 7202
- 50-59: 8293
- 60-69: 12295
- 70-79: 13153
- 80+: 8765
The following charts compare the percentage breakdown of racial or ethnic identification of vaccinated individuals to the expected percentage breakdown of the racial or ethnic identification of the population. A notable discrepancy can be seen when looking at Black individuals, who comprise 47.5% of the Richmond population and 29.4% of the Henrico population yet only 31.0% of vaccine recipients in Richmond and 21.4% of vaccine recipients in Henrico.

*For race/ethnicity of vaccine recipients, “Not Reported” comprises 28.7% (n=6470).
*Missing and Unknown Ethnicities were assumed to be of Non-Hispanic ethnicity.
The figures below compare the percentage breakdown by race and ethnicity specifically for individuals 65 and over. In Richmond City, Black individuals comprise 48.6% of the population of those aged 65 years and older, yet make up only 35.3% of vaccine recipients. This discrepancy can also be noted in Henrico, where Black individuals make up 25.6% of the population, yet thus far have only comprised 20.1% of vaccine recipients.

Vaccine Recipients vs. Population 65 and Over by Race/Ethnicity
Percentages in Richmond – Dec 15, 2020 to Mar 7, 2021

Vaccine Recipients vs. Population 65 and Over by Race/Ethnicity
Percentages in Henrico – Dec 15, 2020 to Mar 7, 2021

*For race/ethnicity of vaccine recipients, “Not Reported” comprises 24.3% (n=9268).
*Missing and Unknown Ethnicities were assumed to be of Non-Hispanic ethnicity.
The below metrics pertain to individuals aged 75 and older. In Richmond, there is a notable discrepancy wherein Black individuals comprise 46.5% of the Richmond population aged 75 years and older but only 34.8% of vaccine recipients. In Henrico, Black individuals comprise 22.9% of the population aged 75 years and older, but only make up 16.2% of vaccine recipients.

Vaccine Recipients vs. Population 75 and Over by Race/Ethnicity
Percentages in Richmond – Dec 15, 2020 to Mar 7, 2021

Total Vaccinations: N = 4614

*For race/ethnicity of vaccine recipients, "Not Reported" comprises 23.8% (n=984).
*Missing and Unknown Ethnicities were assumed to be of Non-Hispanic ethnicity.

Vaccine Recipients vs. Population 75 and Over by Race/Ethnicity
Percentages in Henrico – Dec 15, 2020 to Mar 7, 2021

Total Vaccinations: N = 14861

*For race/ethnicity of vaccine recipients, "Not Reported" comprises 22.1% (n=2994).
*Missing and Unknown Ethnicities were assumed to be of Non-Hispanic ethnicity.
