   6.4 VACCINE DISTRIBUTION BY DEMOGRAPHIC SUBGROUP
KEY TAKEAWAYS

- According to the VDH Pandemic Metrics Dashboard, in Richmond, there were **21.0 new cases per 100,000 in the last week**, an increase from last week. Cases are considered fluctuating. Percent positivity for the locality is 2.0% and is still decreasing overall. In Henrico, there were **12.5 new cases per 100,000 in the last week**. Cases have been decreasing in Henrico for the last 64 days. Percent positivity for the locality is 1.5% and also decreasing.

- Cases in both districts continue to decline, with a 7-day average of 3.0 new cases per day, per 100,000 population in Richmond and 1.8 new cases per day, per 100,000 population in Henrico.
  - Due to recent changes in VEDSS that have impacted the date range of data available for analysis, we have had to limit the demographic analysis in this report to data from the last 4 weeks. Within this range, females comprise a higher proportion of cases and **20-29 year olds** continue to lead case counts in both districts. Regarding race and ethnicity, the highest proportion of cases is still among Black individuals in Richmond and now in Henrico as well.

- Based on data from the VDH Dashboard, **hospitalizations** are fluctuating among Richmond residents and decreasing among Henrico residents. Looking more broadly at health systems within the Richmond catchment area, hospitalizations, ICU hospitalizations, and ventilator utilizations are also decreasing. ICU Hospitalizations have shown recent fluctuations but have overall stayed at a decreased level as compared to January of this year. Similarly, although generally low, ventilator numbers have shown recent mild upticks. All 11 hospitals in the Richmond catchment area are still operating at a normal clinical status. **Hospitalizations by subgroup (sex, age, and race) are reported on a monthly basis.**

- Based on data from the VDH Dashboard, **COVID-19 deaths** are decreasing overall, with a 7-day average of new deaths per day well below 1 in both districts and 0 new deaths reported in the last week. Please note that trends in death data are frequently impacted by a lag in reporting. **Deaths by subgroup (sex, age, and race) are reported on a monthly basis.**

- Richmond and Henrico Health Districts are in Phase 2 of **vaccination**. Anyone 12 or older is eligible to receive a vaccine. As of June 7, 52.4% of the region’s population has received at least one dose of the vaccine and 43.6% of the region’s population has been fully vaccinated. Approximately 50.9% of Richmond and Henrico’s combined population has received at least one dose and 42.1% of the two districts combined population has been fully vaccinated.
  - The majority of vaccine recipients in both districts have been **female**. In both Richmond and Henrico, **older age groups** have consistently been vaccinated at a higher rate than younger age groups, with individuals in Richmond 65 and over, in Henrico 65 and over, and in Henrico between 50-64 all reaching the 70% goal for vaccinated percentage. Available data indicate that eligible **White individuals** have received the majority of the vaccine in both districts.

Weekly cases added are estimated as the difference between the cases recorded from the current and prior week.

Case Rate per 100,000 = (confirmed+probable)/population count * 100,000.

Population estimates for the case rate are from 2019 data compiled by the National Center for Health Statistics (NCHS).
1.2 CURRENT COVID-19 HOSPITALIZATIONS IN THE RICHMOND CATCHMENT AREA ON JUNE 7, 2021
The data included in this section comes from VHASS and it includes data from the following hospitals: VCU Health System, Retreat Doctors’, Bon Secours Community, CWJ Chippenham, CWJ Johnson Willis, VA Medical Center, Bon Secours St. Mary’s, Henrico Doctors, and Parham Doctors, Bon Secours St. Francis, and Memorial Regional Medical Center.

</tr>
</tbody>
</table>

Within these 11 hospitals that comprise the Richmond catchment area, there are currently 157 total available hospital beds, 54 available adult ICU beds, and 312 available ventilators. Based on the VHASS hospital dashboard on June 7, 2021, all 11 hospitals are operating at normal clinical status.**

**A clinical status of “normal” indicates that hospital clinical resources are operating within normal conditions. A clinical status of “full” indicates that hospital clinical resources are exceeded and acceptable care cannot be provided to additional patients. Diversion or Community surge response is required.

2.0 COVID-19 TESTING ENCOUNTERS AND POSITIVITY

2.1 TESTING SUMMARY
Total tests by testing modality and the associated 7-day average in percent positivity are summarized in the table below. Data are from the VDH public dashboard on June 06, 2021.

3.0 COVID-19 CASES

3.1 SUMMARY OF CASES

Cases
Cases in both districts continue to decline, with a 7-day average of 2.6 new cases per day, per 100,000 population in Richmond and 5.7 new cases per day, per 100,000 population in Henrico.

Case Demographics
Due to recent changes in VEDSS which have impacted the date range of data available for analysis, we have had to limit the demographic analysis in this report to data from the last 4 weeks. Within this range, females comprise a higher proportion of cases and 20-29 year olds continue to lead case counts in both districts. Regarding race and ethnicity, the highest proportion of cases is still among Black individuals in Richmond and now in Henrico as well.

3.2 CASE REPORTS TRENDS BY DATE (SOURCE - VDH WEBSITE)

- In Richmond, the 7-day average number of daily new cases reported this week shows a continued decrease in overall case counts. No new cases were reported on June 7, 2021. The 7-day average of new daily cases is currently 3.0 per 100,000 population.
In Henrico, the number of new cases reported per day is fluctuating, though still at a much lower count than in previous months. A total of 2 new cases were reported on June 7, 2021. The 7-day average number of cases reported daily in Henrico County is 2 per 100,000 population.
3.3 CASES BY SEX BY COUNTY

All percentages are based on overall case distribution, rather than the proportion of known cases for each measure, and therefore may not correspond directly with VDH percentages.

Recent changes in VEDSS have impacted the date range of data available for analysis. The charts below show data from the last 4 weeks. We hope to be able to show cumulative data in future reports.

- In Richmond, over the last four weeks, females have comprised a majority of cases (58.17%) when compared to males (41.18%). Sex data has been Missing/Unknown for 0.65% of cases over the last four weeks.

- In Henrico, over the last four weeks, females have comprised 52.23% of cases, whereas males have comprised 46.74% of cases. Sex data for 1.03% of cases over the last four weeks is unknown.
3.4 CASES BY AGE GROUP BY COUNTY

Recent changes in VEDSS have impacted the date range of data available for analysis. The charts below show data from the last 4 weeks. We hope to be able to show cumulative data in future reports.

In Richmond City, individuals aged 20-29 still comprise the highest number of cases in the last four weeks (24.18%), followed by individuals aged 30-39 years (15.03%).

In Henrico, individuals aged 20-29 comprise the highest percentage of cases (16.4%) followed closely by individuals aged 30-39 (15.6%) and individuals aged 50-59 (15.2%) over the last four weeks. Cases by age group in Henrico County show a much more uniform distribution than in Richmond City.
3.5 CASES AND POPULATION PROPORTIONS BY RACE AND ETHNICITY BY COUNTY

Population estimates for the Race and Ethnicity subgroup analyses are based on 2019 5-Year estimates from the American Community Survey by the U.S. Census Bureau.

Recent changes in VEDSS have impacted the date range of data available for analysis. The charts below show data from the last 4 weeks. We hope to be able to show cumulative data in future reports.

COVID-19 case distribution by Race and Ethnicity in the last 4 weeks
(May 3 – June 7, 2021)—Richmond City, VA (N=153)

In Richmond, the case burden for Black individuals over the last 4 weeks (68.6%) is disproportionately high relative to their population percentage (47.5%), while the case burden for White individuals is disproportionately low (17.1%) relative to their population percentage (40.4%).
In Henrico, the case burden for Black individuals over the last 4 weeks (45.7%) is disproportionately high relative to their population percentage (29.4%). The case burden for White individuals has been disproportionately low over the last four weeks (34.8%) relative to their population percentage (53.7%). The case burden over the past four weeks for Latino individuals (8.6%) has been disproportionately high as compared to their population percentage (5.5%).
4.0 COVID-19 HOSPITALIZATIONS

4.1 SUMMARY OF HOSPITALIZATIONS

Hospitalizations among Richmond residents are fluctuating with a 7-day average of about 1. Hospitalizations among Henrico residents are decreasing. Looking more broadly at health systems within the Richmond catchment area, hospitalizations, ICU hospitalizations, and ventilator utilizations are also decreasing. ICU Hospitalizations have shown recent fluctuations but have overall stayed at a decreased level as compared to January of this year. Similarly, although generally low, ventilator numbers have shown recent mild upticks. All 11 hospitals in the Richmond catchment area are still operating at a normal clinical status. Hospitalizations by subgroup (sex, age, and race) are reported on a monthly basis.

4.2 HOSPITALIZATIONS (CONFIRMED AND PENDING) BY DAY IN THE RICHMOND CATCHMENT AREA AS OF JUNE 7, 2021

* Data points from March until November 30th are excluded to allow for clarity in trends/patterns
* Data points from February 15th, 2021 were omitted due to issues with data quality

- In Richmond, the 7-day moving average has shown a fluctuating but relatively low and stable downward trend in recent weeks, with only a few hospital admissions reported in the last week. Notably, this trend may be impacted by a lag in reporting.
- Note: Data from February 15th, 2021 showed an erroneously high value and was subsequently omitted from the analysis. Steps are being taken to restore the quality of this data.
4.3 ICU HOSPITALIZATIONS (CONFIRMED AND PENDING) BY DAY IN THE RICHMOND CATCHMENT AREA AS OF JUNE 7, 2021

Total Daily COVID-19 ICU Hospitalizations, December 1st, 2020 – June 7th, 2021
Richmond Catchment Area (8527 of 18271)

* Data points from March until November 30th are excluded to allow for clarity in trends/patterns

- In Henrico, the 7-day moving average has shown a relatively low and stable trend in March through June following fluctuating higher hospitalization rates in January through February. Notably, this trend may be impacted by a lag in reporting.

4.4 VENTILATOR UTILIZATIONS (PATIENTS ON VENTILATORS) BY DAY IN THE RICHMOND CATCHMENT AREA AS OF JUNE 7, 2021

Total Daily COVID-19 Ventilator Utilizations, December 1st, 2020 – June 7th, 2021
Richmond Catchment Area (4996 of 10139)

* Data points from March until November 30th are excluded to allow for clarity in trends/patterns

- Following a peak in Hospitalizations January of 2021, Hospitalizations in the Richmond Catchment area showed a dramatic decrease through early March, a plateau lasting until late April, and an overall decrease thereafter leading into early June.
5.0 COVID-19 FATALITIES

5.1 SUMMARY OF FATALITIES
Deaths based on date of death in both districts are remaining relatively low and stable entering the month of June, with two deaths in the last three weeks in Richmond County, and zero deaths over the past three weeks in Henrico County. Please note that trends in death data are frequently impacted by a lag in reporting. *Deaths by subgroup (sex, age, and race) are reported on a monthly basis.*

6.0 VACCINATION

6.1 VACCINE SUMMARY
Richmond and Henrico Health Districts are in Phase 2 of vaccination. Anyone 12 or older is eligible to receive a vaccine. As of June 7, 52.4% of the region’s population has received at least one dose of the vaccine and 43.6% of the region’s population has been fully vaccinated. Approximately 50.9% of Richmond and Henrico’s combined population has received at least one dose and 42.1% of the two districts combined population has been fully vaccinated. Local health departments currently appear to be administering the largest percentage of vaccines to Richmond and Henrico residents, compared with other providers.

The majority of vaccine recipients in both districts have been female. In both Richmond and Henrico, older age groups have consistently been vaccinated at a higher rate than younger age groups, with individuals in Richmond 65 and over, in Henrico 65 and over, and in Henrico between 50-64 all reaching the 70% goal for vaccinated percentage. Available data indicate that eligible White individuals have received the majority of the vaccine in both districts. Page 37 includes an estimated breakdown of vaccination uptake by race and age subgroups.

</tbody>
</table>

Population totals are based on 2019 data from the National Center for Health Statistics (NCHS). Please note - this is a change from previous reports which used Census data to estimate population by age group.
Nationally, the Biden administration is using the percentage of adults (individuals 18 and over) to track progress in vaccination.

Though the percentage of the population needed to reach herd immunity is still uncertain, in line with federal guidance, we have set an overall goal of vaccinating 70% of the population. First and second doses of the Pfizer vaccine must be administered at least 21 days apart. First and second doses of the Moderna vaccine must be administered at least 28 days apart. People who received the Johnson & Johnson vaccine, which is a single dose, are included in the count of first doses administered.

</tbody>
</table>

Population totals are based on 2019 data from the National Center for Health Statistics (NCHS). Please note - this is a change from previous reports which used Census data to estimate population by age group.

We have set a goal of vaccinating 75% of the population to reach herd immunity. First and second doses of the Pfizer vaccine must be administered at least 21 days apart. First and second doses of the Moderna vaccine must be administered at least 28 days apart. People who received the Johnson & Johnson vaccine, which is a single dose, are included in the count of first doses administered.
6.4 VACCINE DISTRIBUTION BY DEMOGRAPHIC SUBGROUP

UPDATE: Population estimates for age subgroups and for race and ethnicity subgroups have been changed for this report from the U.S. Census Bureau’s American Community Survey (ACS) 2019 5-year estimates to the National Center for Health Statistics (NCHS) 2019 estimates to align with estimates used by other VDH metrics. This change also involves new race and ethnicity categories: Latino or Hispanic, Non-Hispanic White, Black or African-American, Asian or Pacific Islander, and Native American. Racial groups such as Two or more Races and Other Race have been excluded from the following metrics as they are without corresponding NCHS estimates, but the counts for these groups can be seen in the footnotes immediately below.

In both Richmond and Henrico, a majority of vaccinated individuals have been female.

![Total Vaccine Recipients by Sex in Richmond](June_7_2021_Richmond.pdf)
![Total Vaccine Recipients by Sex in Henrico](June_7_2021_Henrico.pdf)

The following charts track vaccination rates by age group over time since vaccinations first began in mid-December. In both Richmond and Henrico, we can see a steep increase in vaccination rates in February and early March for individuals 65 and over such that over 70% of this age group is now vaccinated but new vaccinations are rising slowly. Individuals aged 18 to 29, 30 to 49, and 50 to 64 saw sharp increases in vaccination rates in mid-March through mid-April, with a steady but slower increase in vaccinations from mid April through early June. Among individuals aged 12 to 17, vaccination rates increased at a slow pace until vaccine opportunities opened up to the general population and then individuals aged 12 to 15 were able to get vaccinated, at which point we have seen a sharp increase in vaccination rates that has not yet noticeably slowed.

Individuals in Henrico have seen consistently higher vaccination rates across all age groups. Individuals in Henrico 65 and over reached the 70% vaccinated threshold in late March while individuals in Richmond 65 and over did not reach this threshold until early May. In addition, individuals in Henrico between 50 and 64 reached this threshold in mid-May, while the same age group in Richmond is still well short of this level.
The following charts compare the percentage breakdown of racial or ethnic identification of vaccinated individuals to the expected percentage breakdown of the racial or ethnic identification of the population. A notable discrepancy can be seen when looking at Black individuals, who comprise 47.0% of the Richmond population and 31.2% of the Henrico population yet only 31.2% of vaccine recipients in Richmond and 20.8% of vaccine recipients in Henrico.

**Vaccine Recipients vs. Population by Race/Ethnicity**
**Percentages in Richmond – Dec 15, 2020 to June 7, 2021**

*For race/ethnicity of vaccine recipients, “Not Reported” comprises 39.0% (n=39,376).*
*Individuals identifying as “Other Race” account for 2,263 vaccinations.*
*Missing and Unknown Ethnicities were assumed to be of Non-Hispanic ethnicity.*

**Vaccine Recipients vs. Population by Race/Ethnicity**
**Percentages in Henrico – Dec 15, 2020 to June 7, 2021**

*For race/ethnicity of vaccine recipients, “Not Reported” comprises 37.5% (n=68,304).*
*Individuals identifying as “Other Race” account for 5,453 vaccinations.*
*Missing and Unknown Ethnicities were assumed to be of Non-Hispanic ethnicity.*
The figures below compare the percentage breakdown by race and ethnicity specifically for individuals 65 and over. In Richmond City, Black individuals comprise 49.9% of the population of those aged 65 years and older, yet make up only 39.5% of vaccine recipients. This discrepancy can also be noted in Henrico, where Black individuals make up 25.5% of the population, yet thus far have only comprised 20.0% of vaccine recipients.

* For race/ethnicity of vaccine recipients, “Not Reported” comprises 24.3% (n=6,155).
* Individuals identifying as “Other Race” account for 429 vaccinations
* Missing and Unknown Ethnicities were assumed to be of Non-Hispanic ethnicity.

Vaccine Recipients vs. Population 65 and Over by Race/Ethnicity
Percentages in Richmond – Dec 15, 2020 to June 7, 2021

Vaccine Recipients vs. Population 65 and Over by Race/Ethnicity
Percentages in Henrico – Dec 15, 2020 to June 7, 2021

* For race/ethnicity of vaccine recipients, “Not Reported” comprises 22.3% (n=11,026).
* Individuals identifying as “Other Race” account for 1,210 vaccinations
* Missing and Unknown Ethnicities were assumed to be of Non-Hispanic ethnicity.
