

Stop lead poisoning now!

Even a little lead is a big problem.

Get your home tested

Homes built before 1978 with chipped, cracked, or peeling paint need to be tested for lead paint.

Get your child tested

A blood test is the only way to determine if a young child has been exposed to lead. Talk to your healthcare provider about getting your young child a yearly blood lead test.

Get the facts

Work safe, work wet, and work clean! Follow lead-safe work practices to maintain, clean, and repair old homes.
