KEY TAKEAWAYS

Cases

Cases appear to have **plateaued** in both Richmond and Henrico in recent weeks. In both localities, the level of community transmission is considered **High** according to the [CDC Covid Data Tracker](#).

7-day total case rate per 100,000		
District	This Week	1 Week Ago
Henrico	144.14	201.62
Richmond	126.28	160.57

Richmond & Henrico	
Demographic	Cumulative Highest
Age	20-29 Year Olds
Sex	Female
Race	Latino & Black

HOSPITALIZATIONS & FATALITIES

Among hospitals in the Richmond Catchment Area, **hospitalizations** have **decreased** since their peak in January. An initial decrease can also be seen for **ICU hospitalizations** and **ventilator utilizations** in the same time period. **Fatalities** appeared to rise in January in both districts. **Data related to deaths are subject to sizable amounts of lag.**

- *7 out of 11 hospitals in the Richmond Catchment Area are operating at a 'Conventional' clinical status, while 2 are operating at 'Crisis' status and 2 are operating at 'Contingency' status.

VACCINATIONS

In Richmond City and Henrico County Health Districts, anyone aged 5 or older is eligible to receive a vaccine. Pharmacies appear to be administering the largest percentage of vaccines to Richmond and Henrico residents, compared with other providers.

Local Vaccination Stats & Regional Comparison			
Location	≥ 1 Dose	Complete	Booster
Richmond City & Henrico County	70.5%	65.3%	33.8%
Region	72.2%	67.0%	33.9%

Vaccination Demographic Trends		
Demographic	Richmond City	Henrico County
Age Groups	30+	12+
Sex	Female	
Race	Asian/Pacific Islander & Latino	

In both Richmond and Henrico, older age groups have consistently been vaccinated at a higher rate than younger age groups. Section 4 includes an estimated breakdown of vaccination uptake by race and age subgroups.

1.0 COVID-19 SNAP SHOT

1.1 Total Tests & Percent Positivity by Modality in Richmond and Henrico

Total tests by testing modality and the associated 7-day average in percent positivity are summarized in the table below. Data are from the [VDH public dashboard](#) on February 28, 2022.

	RICHMOND CITY		HENRICO COUNTY	
	Tests	Positivity	Tests	Positivity
PCR*	493,718	9.8%	541,312	10.9%
Antigen	139,538	5.4%	220,523	8.1%
Total (PCR, antigen, and antibody)	639,884	9.0%	773,113	10.4%

1.2 Confirmed Cases, Hospitalizations, Fatalities, & Probable Cases by County

CASE STATUS	RICHMOND CITY	HENRICO COUNTY	VIRGINIA
New cases this week (February 28th)	198	353	5,828
All cases	43,619	63,244	1,636,510
Confirmed cases	32,402	41,313	1,167,034
Hospitalizations	998	1,294	44,493
Deaths	393	756	15,352
Probable cases	11,217	21,931	469,476
Hospitalizations	31	62	2,765
Deaths	67	106	3,184
Case rate per 100,000	18928.9	19117.5	19172.9

Weekly cases added are estimated as the difference between the cases recorded from the current and prior week

*Case Rate per 100,000=(confirmed+probable)/population count *100,000.*

Population estimates for the case rate are from 2019 data compiled by the National Center for Health Statistics (NCHS).

1.3 Current COVID-19 Richmond Catchment Area Hospitalizations

The following section utilizes data from the Virginia Healthcare Alerting & Status System (VHASS) COVID-19 Hospital Status Board. This data reflects the following hospitals in the Richmond Catchment Area (Chesterfield County, Hanover County, Henrico County, & Richmond City): VCU Health System, Retreat Doctors', Bon Secours Community, CWJ Chippenham, CWJ Johnson Willis, VA Medical Center, Bon Secours St. Mary's, Henrico Doctors, and Parham Doctors, Bon Secours St. Francis, and Memorial Regional Medical Center.

	TOTAL IN USE FOR COVID-19	CURRENTLY AVAILABLE
Confirmed Hospitalizations	162	105
Pending Hospitalizations	15	
Confirmed - ICU	31	29
Pending - ICU	*	
Confirmed - Ventilators	20	324
Pending - Ventilators	*	

Between the 11 hospitals that comprise the Richmond catchment area, there are currently 105 total available hospital beds, 29 available adult ICU beds, and 324 available ventilators. Based on the VHASS hospital dashboard on February 28, 2022, 7 hospitals in the Richmond Catchment area are operating at Conventional clinical status, two hospitals are operating at Crisis clinical status, and two hospitals are operating at Contingency clinical status.

*A clinical status of "conventional" indicates that the spaces, staff, and supplies used are consistent with daily practices within the hospital.

*A clinical status of "contingency" indicates that the spaces, staff, and supplies used are not consistent with daily care but provide care that is functionally equivalent to usual patient care. Healthcare practices utilize limited resources differently than usual with the expectation that such altered practices are developed and performed in accordance with normal standards of care. In contingency conditions, this standard of care is maintained by providing care within the range of functionally equivalent options to care in conventional conditions.

*A clinical status of "crisis" indicates that Crisis Standards of Care apply. Care is no longer functionally equivalent to usual standards of care. Risk to the patient or provider may exist.

2.0 COVID-19 CASES

2.1 Summary of Cases

After recent highs in January, 2022, cases in both districts appear to be following a downward trend heading into the month of March. In Richmond, on March 1st, the **7-day total case rate** was **126.28** new cases per 100,000 population, while in Henrico the **7-day total case rate** was **144.19** new cases per 100,000 population. Additionally, in both Richmond and Henrico, the level of community transmission has been **High** for weeks, according to the [CDC Covid Data Tracker](#).

Female individuals in both Richmond and Henrico comprise a higher proportion of cases compared to male individuals, both in the last four weeks and cumulatively.

In Richmond, 30-39 year olds have the highest case rate by age group over the last four weeks, followed by 20-29 year olds & 40-49 year olds. Individuals aged 20-29 have the highest cumulative case rate in Richmond. In Henrico, individuals 20-29 showed the highest cumulative case rate, individuals 0-9 showed the highest case rate in recent weeks.

Regarding race and ethnicity, while the highest proportion of cases over the last four weeks is amongst Black individuals, the proportion of cases amongst white individuals is greater than their population percentage. In Henrico, the proportion of cases over the last four weeks amongst White individuals is higher than their population proportion while the case burden for Black individuals is lower than their population proportion. In both localities, cases have been disproportionately high cumulatively for Latino individuals, but over the last four weeks, the case burden for Latinos in Richmond City has been lower than or approximately equal to their respective estimated proportion of the population.

2.2 Case Reporting Trends by Report Date

Case counts by report date show the day to day change in cumulative count of cases within an area. It does not attempt to show the number of cases by the date the individuals got sick.

Source: [VDH COVID-19 Cases & Testing Locality Dashboard](#)

- Large amounts of COVID-19 case data were reported during the month of January (2022), and thus the most recent peak shown above could be artificially inflated.
- Despite the notable peak during January, data from February indicates a downward trend in cases per day in Richmond City.

Past 90 Days

- Recent case data by report date suggests a downward trend in cases per day in Henrico County, following the most recent uptick in late January.

2.3 Cases by Age Group by County

Population totals are based on 2019 data from the National Center for Health Statistics (NCHS). Please note - this is a change from previous reports which used Census data to estimate population by age group.

COVID-19 Case Distribution by Age in the Last 4 Weeks (January 31, 2022 - February 27, 2022)
- Richmond City, VA (N = 1,455)

COVID-19 Case Distribution by Age as of February 27, 2022
- Richmond City, VA (N = 43,619)

- In Richmond City, individuals aged 30-39 have the highest case rates in the last four weeks, closely followed by individuals aged 20-29 & 40-49. Individuals aged 20-29 have the highest case rate cumulatively.

COVID-19 Case Distribution by Age in the Last 4 Weeks (January 31, 2022 - February 27, 2022)
- Henrico County, VA (N = 2,607)

COVID-19 Case Distribution by Age as of February 27, 2022
- Henrico County, VA (N = 63,244)

- In Henrico, individuals aged 0-9 have the highest case rates in the last four weeks, followed by those aged 30-39. Individuals aged 20-29 have the highest case rate cumulatively followed by those 30-39.

2.4 Cases & Population Proportions by Race & Ethnicity by County

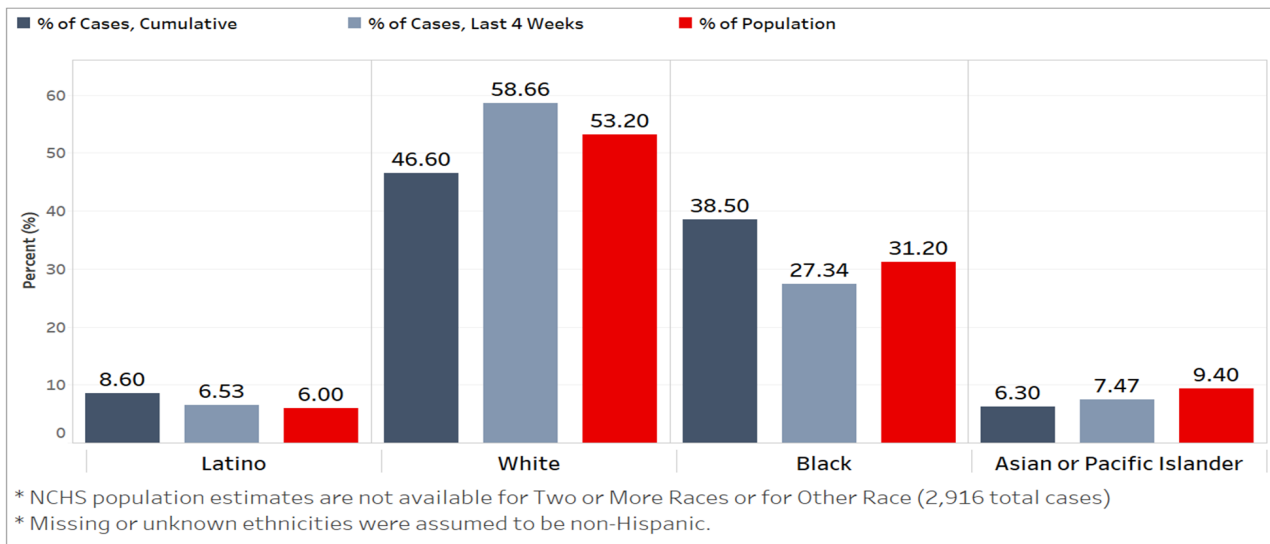

Population totals are based on 2019 data from the National Center for Health Statistics (NCHS).

COVID-19 Case Distribution by Race/Ethnicity over the last 4 weeks (January 31, 2022 - February 27, 2022) and cumulatively as of February 27, 2022 - Richmond City, VA

- In the last 4 weeks in Richmond, the case burden for Black individuals (47.1%) is within 0.1% of their population percentage (47.0%), a noticeable reduction from the cumulative percentage (56.1%), and the case burden for White individuals (43.7%) is within 2% of their population proportion (42.8%). The case burden for Latino individuals (6.5%) is slightly lower than their population percentage (7.3%).

COVID-19 Case Distribution by Race/Ethnicity over the last 4 weeks (January 31, 2022 - February 27, 2022) and cumulatively as of February 27, 2022 - Henrico County, VA

- In Henrico in the last four weeks the case burden for Black individuals (27.3%) is lower than their proportion of the population (31.2%). The case burden for White individuals (58.7%) is high, relative to their proportion of the population (53.2%). The recent case burden has fallen slightly more heavily on the Asian or Pacific Islander population (7.5%) than has the cumulative burden (6.3%), both of which fall under the population percentage (9.4%).

3.0 Hospitalizations & Fatalities

3.1 Summary of Hospitalizations & Fatalities

Among hospitals in the Richmond Catchment Area, **hospitalizations** have **decreased** over the past four weeks after reaching new all-time peaks in January. A decrease followed by a plateau can also be seen for **ICU hospitalizations** and **ventilator utilizations** in the same time period. **Fatalities** declined in October and November after recent peaks of around 40 per month in both Richmond and Henrico in September before rising to counts around 20 in both localities in December and a peak around 40 in Richmond and around 80 in Henrico in January. **However, data related to deaths are subject to sizable amounts of lag.**

3.2 COVID-19 Hospitalization, ICU, & Ventilator Utilization (VHASS)

Total Daily COVID-19 Hospitalizations, ICU Hospitalizations, and Ventilator Utilizations
August 19, 2021 – February 28, 2022
Richmond Catchment Area Hospitals

*Counts Displayed in Above Metric - Hospitalizations: 43,067 of 122,258; ICU Hospitalizations: 9,329 of 28,687; Ventilator Utilizations: 4,708 of 15,256

- Hospitalizations, ICU Hospitalizations, and Ventilator Utilizations in the Richmond Catchment area showed an overall decrease from late September through mid-December besides a couple of notable fluctuations.
- Starting in mid-December, there was a sharp rise in Hospitalizations to new all-time peaks, along with relatively moderate corresponding increases in ICU Hospitalizations & Ventilator Utilizations to new recent peaks.
- Recent weeks have shown a marked decrease in Hospitalizations, while ICU Hospitalizations and Ventilator Utilizations decreased before plateauing at moderately high levels.

4.0 VACCINATION

4.1 Vaccine Summary

In Richmond City and Henrico County Health Districts, anyone aged 5 or older is eligible to receive a vaccine.

As of February 28, 72.2% of the region's population has received at least one dose of the vaccine. 67.0% of the region's population has been fully vaccinated. A growing number of 33.9% had received a booster in the region. Approximately 70.5% of the combined Richmond City and Henrico County population has received at least one dose and 65.3% of the two districts' combined population has been fully vaccinated. 33.8% of the population has also received a booster.

In both Richmond City and Henrico County, older age groups have consistently been vaccinated at a higher rate than younger age groups. In Richmond City, the 70% vaccination benchmark has been met by individuals aged 65 and over. In Henrico County that same benchmark has been met by all age groups over 12 years old.

This section includes an estimated breakdown of vaccination uptake by race, sex, and age subgroups.

4.2 Percentage of Vaccination Goals Reached by Population

County	Age Group	POPULATION	PEOPLE WITH AT LEAST ONE DOSE	PEOPLE FULLY VACCINATED	PEOPLE WITH BOOSTER
Richmond	5-11	15,198	4,961 (32.6%)	3,906 (25.7%)	1 (0%)
	12-17	11,150	7,051 (63.2%)	6,157 (55.2%)	1,240 (11.1%)
	18+	190,750	130,034 (68.2%)	120,330 (63.1%)	61,335 (32.2%)
	65+	31,809	25,781 (81%)	24,198 (76.1%)	16,687 (52.5%)
Henrico	5-11	28,406	12,638 (44.5%)	10,274 (36.2%)	(0%)
	12-17	25,954	19,928 (76.8%)	17,919 (69%)	3,819 (14.7%)
	18+	256,660	213,644 (83.2%)	201,074 (78.3%)	104,505 (40.7%)
	65+	52,720	49,618 (94.1%)	47,106 (89.4%)	33,792 (64.1%)

Population totals are based on 2019 data from the National Center for Health Statistics (NCHS). These totals are used in order to calculate percent in each column. Please note - this is a change from previous reports which used Census data to estimate population by age group.

4.3 Vaccinations by Locality as of February 28, 2022

Source: vdh.virginia.gov

HEALTH DISTRICT	LOCALITY	TOTAL POPULATION	PEOPLE WITH AT LEAST ONE DOSE	PEOPLE FULLY VACCINATED	PEOPLE WITH BOOSTERS
Chesterfield	Chesterfield	352,802	264,106	240,785	119,360
	Colonial Heights	17,370	11,433	10,097	4,817
	Powhatan	29,652	18,189	16,859	8,623
Chickahominy	Charles City	6,963	7,112	7,107	2,211
	Goochland	23,753	18,749	18,111	9,745
	Hanover	107,766	79,890	77,249	39,067
	New Kent	23,091	15,406	14,886	7,463
Henrico	Henrico	330,818	250,994	233,415	120,164
Richmond	Richmond City	230,436	144,125	133,324	69,396
Total		1,122,651	810,004	751,833	380,846

Population totals are based on 2019 data from the National Center for Health Statistics (NCHS). Please note - this is a change from previous reports which used Census data to estimate population by age group.

4.4 Vaccine Uptake by County, Age Group, and Racial/Ethnic Group Over Time

The following charts track vaccination percentage by age group over time since vaccinations first began in mid-December. **Note: These plots exclude individuals under 12, so the total vaccinations reported for each plot will not match the numbers reported in other sections.**

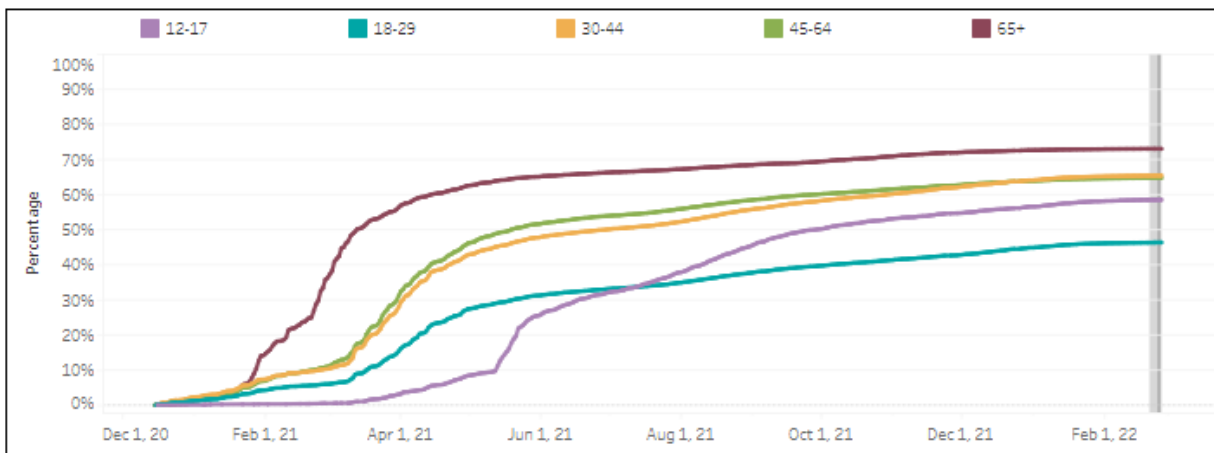

Richmond

- Overall vaccination percentage in Richmond notably increased in March 2021 and maintained this pace into April before beginning to slow down when just under 50% of the population had received at least one dose.
- In fall and winter 2021, new vaccinations have continued at a slow but steady pace and the overall vaccination percentage is over 70%.
- Vaccination percentage rose quickly among individuals 65 and over earlier than other age groups and new vaccinations started to slow down as other age groups saw increases.
- One can observe that since March 2021, vaccination among individuals 30 to 64 is similar to the overall trend, with a slower trend for individuals 18 to 29 and a delayed increase for individuals 12 to 17 corresponding to when 12 to 15 year olds became eligible.
- Among race and ethnicity groups through spring 2021, vaccination percentage increased fastest among White and Asian or Pacific Islander individuals before slowing down with some fluctuations since then. Meanwhile, the trend was initially slower among Latino individuals, but it did not slow nearly as noticeably and they now constitute the highest vaccinated percentage.
- The overall trend for vaccinations has been slowest for Black individuals and for individuals 18 to 29 in Richmond.
- All vaccination percentages are based on NCHS population estimates, which are subject to some variability. Lags in data reporting can occur, as indicated by the gray region in recent days.

Percentage of Individuals 12 and Over with At Least One Dose (N=144,027)
as of February 26, 2022 - Richmond City

By Age Group (n=137,083)

*Age group of "Null" value: n=1,999

By Race & Ethnicity (n=125,746)

*Race/ethnicity group of "Unknown" or "Other Race" value: n=17,620

Henrico

- Overall vaccination percentage in Henrico saw a large increase over the course of late February through early May 2021 before beginning to slope off to a slow, steady pace in recent months. The overall percentage currently is over 80% of the population.
- A large proportion of individuals 65 and over were vaccinated in February and early March 2021 before the trend slowed in spring.
- Individuals 18 to 29, 30 to 44, and 45 to 64 all saw similar patterns of increases in mid-March through the end of April 2021, with the actual increase being somewhat faster among older individuals than younger individuals, while individuals 12 to 17 saw a drastic increase in vaccination percentage when 12 to 15 year olds became eligible.
- Trends in vaccination percentage among race and ethnicity groups were initially fastest among White individuals in February and March 2021 before being overtaken by Asian and Pacific Islander individuals in April. Latino individuals appear to have since achieved the highest percentage of vaccinated individuals in fall 2021, though still close to the overall percentage for Asian or Pacific Islander individuals; both groups are over 85% vaccinated.
- Black individuals maintained a pace with other race and ethnicity groups in the first three months of 2021 but did not see the same degree of increased trends in spring. They currently possess the lowest vaccination percentage at about 65%.
- All vaccination percentages are based on NCHS population estimates, which are subject to some variability. Lags in data reporting can occur, as indicated by the gray region in recent days.

Percentage of Individuals 12 and Over with At Least One Dose (N=249,629)
as of February 26, 2022 - Henrico County

By Age Group (n=233,563)

*Age group of "Null" value: n=3,441

By Race & Ethnicity (n=214,310)

*Race/ethnicity group of "Unknown" or "Other Race" value: n=33,624

4.5 Booster Uptake by County, Age Group, and Racial/Ethnic Group Over Time

Richmond

- The overall percentage of the population having received a booster has risen steadily since late October 2021, with no noticeable increase in the overall trend when all adults became eligible or when the Omicron variant was announced. Currently about 35% of the population is boosted.
- Individuals 65 and over have seen by far the fastest growth overall, though the trends for 30 to 44 year olds and 45 to 64 year olds have been higher in winter 2021/2022. Individuals 18 to 29 represent the lowest boosted percentage among all age groups in Richmond, just as they do for the primary series.
- Boosted percentages among White and among Asian or Pacific Islander individuals have increased generally in line with one another and are at around 40%, while boosted percentages among Latino and among Black individuals have increased at a slower but similar rate and are currently near 20%.
- All boosted percentages are based on NCHS population estimates, which are subject to some variability. Lags in data reporting can occur, as indicated by the gray region in recent days.

Boosted Percentage of Adult Population (N=66,478) as of February 26, 2022 - Richmond City

By Age Group (n=65,207)

*Age group of "Null" value: n=0

By Race & Ethnicity (n=62,834)

*Race/ethnicity group of "Unknown" or "Other Race" value: n=3,233

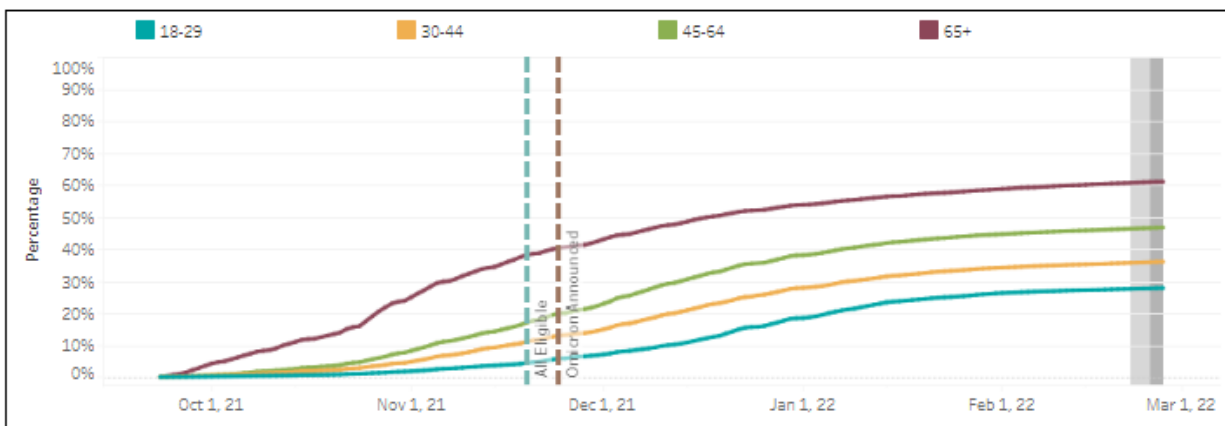

Henrico

- Overall boosted percentage has steadily increased since late October 2021, with no noticeable change after all adults became eligible or after the Omicron variant was announced. The boosted percentage of the population is over 40%.
- Boosted percentage by age group is spread out, with 60% of individuals 65 and over boosted but less than 30% of individuals 18 to 29.
- Individuals 30 and over have increased steadily in boosted percentage since late October 2021, but the trend for 18 to 29 year olds has sloped upwards since December 2021.
- White individuals were observed to have the fastest early rate of new vaccinations, but the trend for Asian or Pacific Islanders sloped upwards when all adults became eligible for the booster and when the Omicron variant was announced. White individuals and Asian or Pacific Islander individuals now have a similar boosted percentage at around 40%.
- Black individuals and Latino individuals have had similar slow, steady trends in new vaccinations and are at just over 20% boosted.
- All boosted percentages are based on NCHS population estimates, which are subject to some variability. Lags in data reporting can occur, as indicated by the gray region in the last few days of the reporting period.

Boosted Percentage of Adult Population (N=114,889) as of February 26, 2022 - Henrico County

By Age Group (n=110,509)

*Age group of "Null" value: n=0

By Race & Ethnicity (n=108,297)

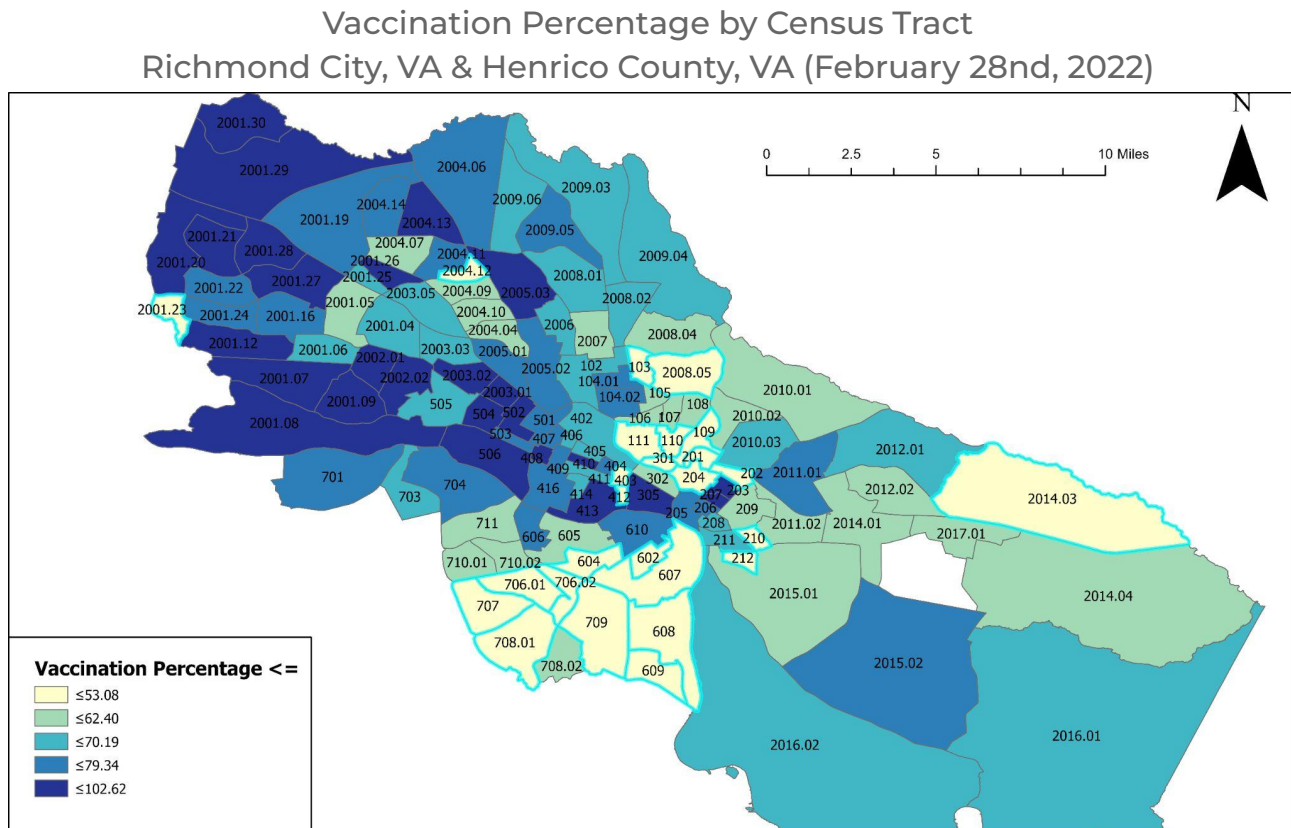

*Race/ethnicity group of "Unknown" or "Other Race" value: n=5,486

4.6 Vaccine Distribution Maps

Below are maps that compare vaccination uptake percentage and COVID-19 burden by census tract. The data collected is consistent with statewide and national data trends; lower income communities of color tend to experience more severe outcomes of COVID-19, yet are disproportionately undervaccinated. RHHD monitors this data as part of its equity-driven approach; this data is used to assist program managers in strategically standing up vaccination opportunities, outreach, and education efforts in areas that are in highest need.

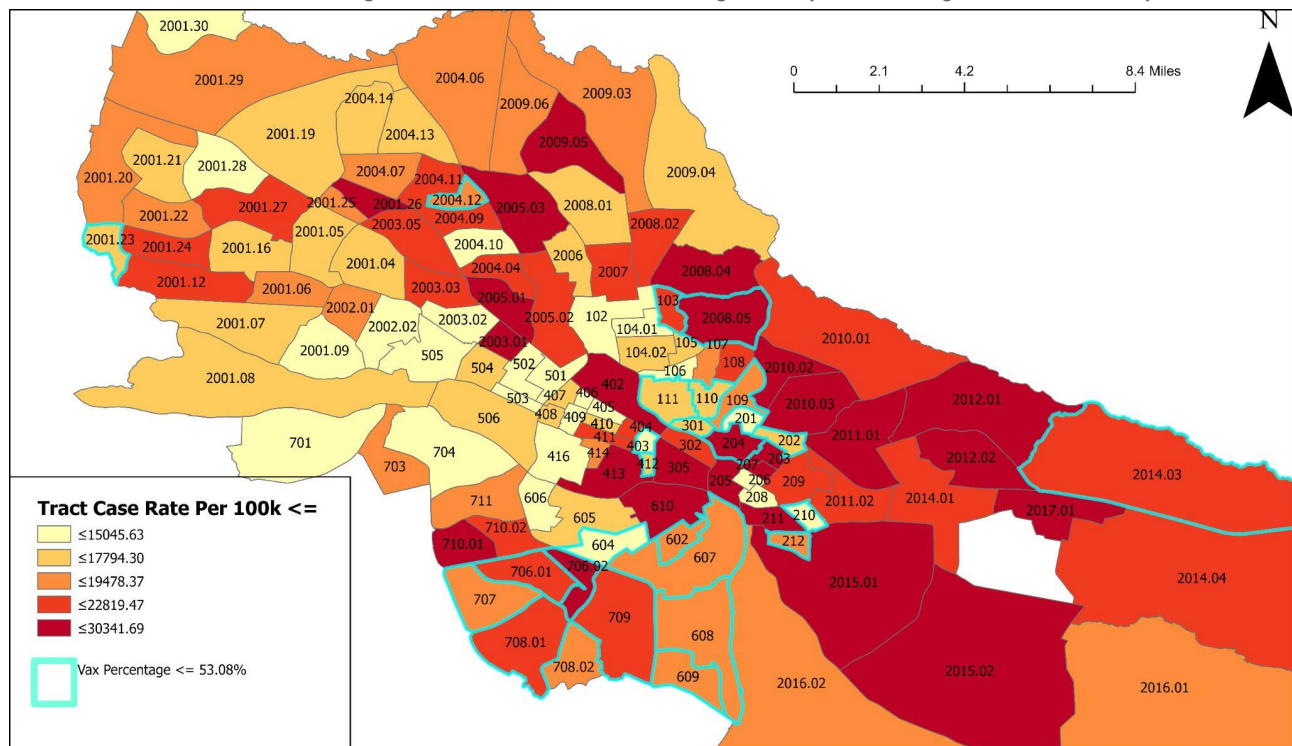

These percentages are estimations, and are solely intended for use in the planning and facilitation of outreach events.

*Percentage of population receiving at least one dose

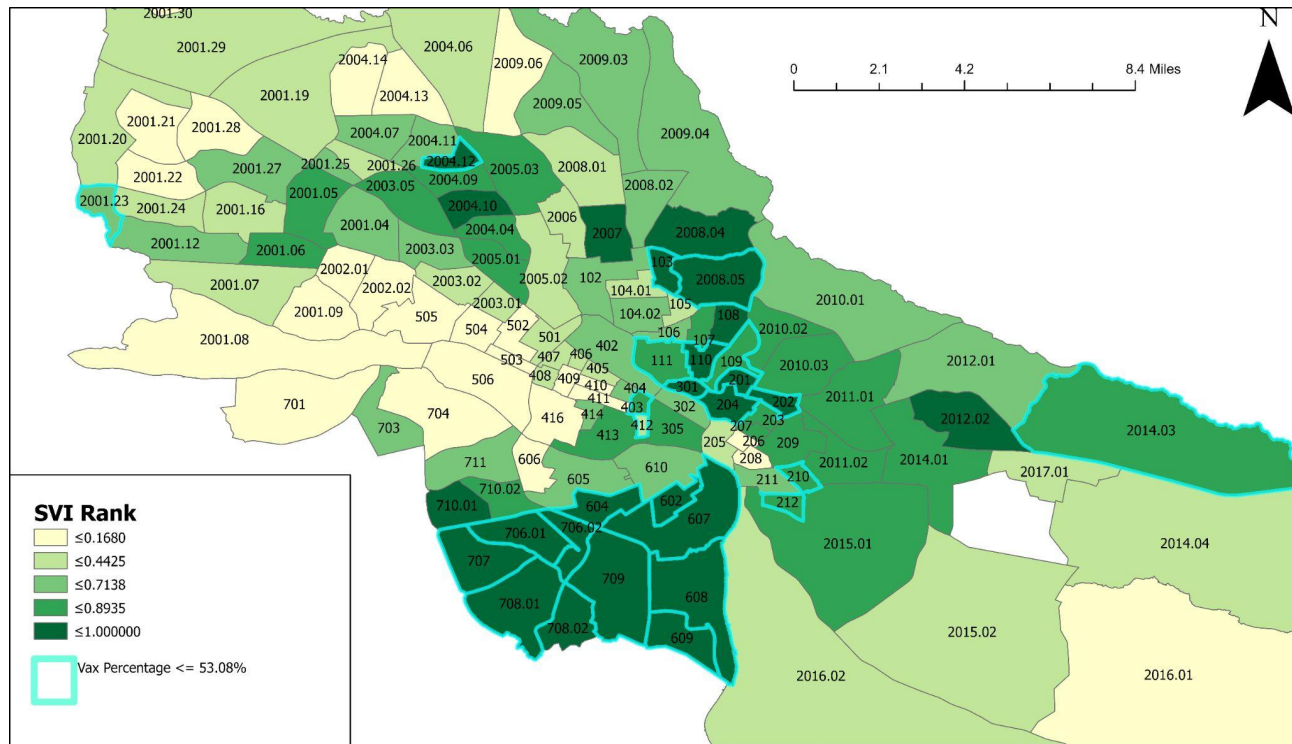

*Percentages over 100% are likely due to population figures being slightly out of date

COVID-19 Case Rate per 100k & Low Vaccination Percentage Tracts Richmond City, VA & Henrico County, VA (February 28nd, 2022)

*Percentage of population receiving at least one dose

Social Vulnerability & Low Vaccination by Census Tract Richmond City, VA & Henrico County, VA (February 28nd, 2022)

*Percentage of population receiving at least one dose

- **Social vulnerability** is based on the CDC's [Social Vulnerability Index](#), last updated in 2018.
- **COVID-19 vaccination percentages** reflect the percentage of the **Total Population** within each tract that has been vaccinated. Data are sourced from the Virginia Immunization Information System (VIIS).
- **COVID-19 case rates** reflect **Cumulative** cases per 100,000 census tract population and are sourced from the Virginia Electronic Disease Surveillance System (VEDSS).
- **Population estimates** are from the US Census 2019 ACS Community Survey 5-year estimates.
- SVI, vaccination percentage, and case rates are visualized on these maps using the [quantiles classification](#) method, dividing the range into 5 groups, each containing the same number of observations (census tracts).

5.0 Glossary

7-day average number of new daily cases

Recurrent average of the number of cases for each consecutive 7-day period regardless of data availability.

7-day total case rate per 100,000

Calculated by adding the number of new cases in the county (or other administrative level) in the last 7 days divided by the population in the county (or other administrative level) and multiplying by 100,000. **7-day total case rate per 100,000** is considered to have a transmission level of Low (0-9.99), Moderate (10.00-49.99), Substantial (50.00-99.99), or High (greater than or equal to 100.00).

Antigen

Antigens are molecules capable of stimulating an immune response. Antigen tests are commonly used in the diagnosis of respiratory pathogens such as the COVID virus.

Assisted living facilities

A housing facility designed for people with disabilities or adults who cannot/decide not to live independently

At least one dose

This metric includes everyone who has received only one dose [including those who received one dose of the single-shot Johnson and Johnson's Janssen COVID-19 vaccine] and those who received more than one dose.

Case rate

the number of cases per 100,000 people in the population. Calculation: $((\text{Confirmed Cases} + \text{Probable Cases}) / \text{Population Estimate}) * 100,000$

Community Transmission

Refers to when an individual is infected with the COVID-19 in an area, including some who are not sure how or where they became infected. Community Transmission is low when less than 10 new cases per 100,000 persons in the past 7 days OR <5% of positive NAATs tests during the past 7 days. Nucleic Acid Amplification Test, or NAAT, is a type of viral diagnostic test for SARS-CoV-2, the virus that causes COVID-19

Confirmed Case

A confirmed case is an individual who had a confirmatory viral test performed by way of a throat swab, nose swab or saliva test and that specimen tested positive for SARS-CoV-2, which is the virus that causes COVID-19.

Congregate settings

A setting where a number of people reside, meet or gather in close proximity for a period of time. Examples include homeless shelters, prisons, detention centers, schools and workplaces.

Cumulative

Consisting of accumulated parts created by successive additions - In the context of this report “cumulative” refers to the total number of things (cases, vaccinations, deaths, ect) that have occurred during the time frame referenced.

Fully Vaccinated

For the purposes of this report an individual is considered fully vaccinated after receiving two doses of either the Pfizer-BioNTech COVID-19 vaccine (COMIRNATY) or the Moderna COVID-19 vaccine, or after receiving one dose of the Janssen (Johnson & Johnson) COVID-19 vaccine.

High density workplaces

Workplace settings in which individuals are there for long time periods (e.g., for 8-12 hours per shift), and have prolonged close contact (within 6 feet for 15 minutes or more).

Hospitalizations

Number of confirmed & pending COVID-19 patients receiving inpatient hospital care or utilizing an inpatient hospital bed (e.g., observation status) AND being treated for COVID-19 related complications. This metric is not cumulative; only report current counts at the time the user updates VHASS. This metric excludes confirmed inpatients in the hospital for primary reasons other than COVID complications.

ICU hospitalizations

Number of confirmed & pending COVID-19 patients receiving inpatient hospital care and are utilizing an Intensive Care Unit (Adult CC) bed for treatment related to COVID-19 complications. This metric is not cumulative; only report current counts at the time the user updates VHASS. This metric excludes confirmed inpatients in the hospital for primary reasons other than COVID-19 complications.

Independent living facilities

Housing arrangements and communities for older adults that range from apartment-style communities to housing co-ops. It is designed for seniors who can still live independently

Locality

A community in which people live. The Commonwealth of Virginia is divided into 95 counties, along with 38 independent cities that are considered county-equivalents for census purposes. For the purpose of this report, the term “Locality” is used to refer to one of these 133 independent communities. The boundaries of the Richmond City Health Department and Henrico Health Department closely align with the boundaries of the Richmond City and Henrico County localities, but that is not the case with many other health districts across the state.

Long-term care facilities

Housing facilities for people with disabilities or for adults who cannot or who choose not to live independently.

NCHS

The National Center for Health Statistics who releases bridged-race population estimates of the resident population of the United States for use in calculating the Nation's official vital statistics

PCR

PCR stands for polymerase chain reaction. The test isolates genetic material from a patient sample and duplicates it many times, allowing for the presence of COVID-19 genetic material to be detected if present. The PCR test is the strongest and most reliable COVID-19 test currently available.

Percent positivity

For each event is calculated by dividing the number of tests yielding a 'Detected' result by the summed number of 'Detected' and 'Not Detected' results, and then multiplying this number by 100 to get a percent.

Population Estimate

Unless otherwise stated, population totals are based on 2019 data from the National Center for Health Statistics (NCHS). Please note- this is a change from some previous reports which used aggregated Census data regarding population by age group.

Probable Case

A probable case is an individual who has not had a confirmatory test performed but has: a positive antigen test, or clinical criteria of infection and is at high risk for COVID-19 infection (e.g. healthcare worker)

Provider Category

Health Department, Pharmacy, Health System, Community Provider, Safety Net, Other Locality

Race/Ethnicity

Prioritizes Hispanic Ethnicity over Patient stated Race, consolidates into groups: Hispanic, Asian & Pacific Islanders, White, Black, Native American & Unreported

Resident

Person(s) who self indicate, through census enumeration, medical documentation, or registration information that their primary residence is within the locality or health district referenced

Richmond catchment area

Hospital jurisdictions that serve the population of the greater Richmond metropolitan area: these include the hospital jurisdictions of Hanover, Henrico, Chesterfield, and Richmond City.

Sara Alert

Virginia based voluntary contact monitoring platform; individuals can update local health departments on their health status during the period of time they are participating in public health monitoring. The Sara Alert system is secure and always contacts users from the same phone number or email: 844-957-2721 or notifications@saraalert.org.

Social Vulnerability

The potential negative effects on communities caused by external stresses on human health. Such stresses include natural or human-caused disasters, or disease outbreaks. Reducing social vulnerability can decrease both human suffering and economic loss. More information on the CDC's Social Vulnerability Index can be found at <https://svi.cdc.gov/>

Spread

COVID-19 spreads when an infected person breathes out droplets and very small particles that contain the virus. These droplets and particles can be breathed in by other people or land on their eyes, noses, or mouth. In some circumstances, they may contaminate surfaces they touch. People who are closer than 6 feet from the infected person are most likely to get infected.

Suspect Case

Meets supportive laboratory evidence, with no prior history of being a confirmed or probable case. For suspect cases, jurisdictions may opt to place them in a registry for other epidemiological analyses or investigate to determine probable or confirmed status.

Tested Count

Represents all individuals who received a 'Detected', 'Not Detected', or 'Inconclusive' result (Records from individuals who registered for an event but who were not tested were removed prior to this analysis).

Testing Encounter

Instance where COVID-19 test is administered to a person in the community via a known provider.

Vaccination Percentage

The number of individuals vaccinated divided by estimated population of a referenced community, locality or health district - Whether "Vaccinated" refers to "Fully vaccinated" or "At least one dose" should be clarified in the specific metric.

VEDSS

Virginia Electronic Disease Surveillance System (VEDSS) is the primary data system used by the Virginia Department of Health (VDH) for disease surveillance. VEDSS is used to track COVID-19 cases and laboratory reports.

Ventilator utilizations

The number of Ventilators currently in use to treat patients diagnosed with COVID-19 amongst hospitals within the Richmond Catchment Area.

VHASS

The Virginia Healthcare Alerting and Status System (VHASS) is the data system used to collect information on hospital status, resources, and critical care capabilities. VHASS helps in the distribution of critical emergency management information needed by Virginia hospitals and healthcare providers.

VIIS

The Virginia Immunization Information System (VIIS) is Virginia's statewide immunization registry that contains immunization data of persons of all ages.

ZCTA

ZIP Code Tabulation Areas (ZCTAs) are generalized areal representations of United States Postal Service (USPS) ZIP Code service areas.
