Monoclonal Antibody Therapy for COVID-19

Learn how it can save your life.

Q What is monoclonal antibody therapy used for?

You are eligible for monoclonal antibody therapy if you have tested positive for COVID-19 and have symptoms, or if you have been exposed to the virus and are not fully vaccinated. See additional requirements below:

Healthcare providers use monoclonal antibody therapy to *treat* COVID-19 illness in children and adults who meet the following criteria:

- They have mild to moderate symptoms that began within the previous 10 days.
- They are not in the hospital because of COVID-19.
- They are in a group at high risk of serious COVID-19 illness.

Healthcare providers use monoclonal antibody therapy to *prevent* COVID-19 illness in children and adults who meet these criteria:

- They have been exposed to the COVID-19 virus.
- They have not been fully vaccinated or they have a weakened immune system.
- They are in a group at high risk of serious COVID-19 illness.

Q Where can I get monoclonal antibody therapy?

Contact your physician or use the Virginia Department of Health's **online monoclonal antibody locator** to find the nearest treatment site. The medication is free and requires a prescription. Your standard co-pay may still apply.

If you have recently tested positive for or been exposed to COVID-19, talk to your healthcare provider about monoclonal antibody therapy today.
