## Executive Summary

This report presents the results of a Community Health Needs Assessment (CHNA) for counties of Culpeper, Madison and Orange. The CHNA was guided by five regional organizations that decided to collaborate for community health assessment and improvement.<sup>1</sup>

As shown in the map below, this region is home to more than 105,276 community members. The CHNA study was designed to provide insight about community health needs and opportunities for community health improvement. Research activities for the study included a survey of community residents, a survey of community professionals, and analysis of a variety of community health indicators.

This Executive Summary provides an overview of the study results. More detailed analysis is provided in the four sections that follow, including:

- Section 1. Insights from Community Residents
- Section 2. Insights from Community Professionals
- Section 3. Community Indicator Profiles
- Section 4. Social Determinants of Health

<sup>1</sup> Community Health Solutions provided research support, data analysis support, and drafting support for the CHNA.

## Summary Insights from Community Residents (Section 1)

**Section 1** of the report presents results from the survey of community residents. Insights were collected via surveys administered online (see Section 1 for more detail on the impact of COVID-19 on survey methods). Four hundred and nine (409) community residents submitted a response (although not every respondent answered every question). The respondents provided rich insights about community health in the study region. The summary results are outlined below and presented in more detail in Section 1 of the report.

<b>Demographic Profile</b>	<ul style="list-style-type: none"> <li>• 409 community residents completed the survey</li> <li>• Respondents were mostly white, female, middle aged (35-64), and at the upper income level</li> </ul>
<b>Community Needs Related to COVID-19</b>	<ul style="list-style-type: none"> <li>• 20% reported they or an immediate family member lost employment.</li> <li>• Eight respondents (1%) reported they or an immediate family member lost housing.</li> <li>• Groups identified as needing extra help due to COVID-19 include elderly; Hispanic; children; low income; people with disabilities; and isolated individuals.</li> <li>• Among the most identified personal difficulties were feeling lonely or isolated from others; keeping good mental health; and keeping good physical health.</li> </ul>
<b>Neighborhood and Community Environment Needs</b>	<ul style="list-style-type: none"> <li>• The leading neighborhood and community needs were jobs/healthy economy; affordable housing; and an environment more welcoming of diversity.</li> </ul>
<b>Health Care Service Needs</b>	<ul style="list-style-type: none"> <li>• The leading health care service needs were affordable health insurance; healthcare for the uninsured/underinsured; and mental health services.</li> </ul>
<b>Community Support Service Needs</b>	<ul style="list-style-type: none"> <li>• The leading community support service needs were after school programs; aging services; childcare services; and public transportation.</li> </ul>
<b>Defining a Healthy Community</b>	<ul style="list-style-type: none"> <li>• Respondents defined a healthy community as one with access to healthcare services; access to community and social services; supports for children; supports for healthy lifestyles; supports for people with disabilities.</li> </ul>
<b>Groups Who Need Help Obtaining Better Health</b>	<ul style="list-style-type: none"> <li>• The most commonly identified groups needing help included the elderly, people with low income, minority populations, children, and people with behavioral health concerns.</li> </ul>
<b>New Health Issues</b>	<ul style="list-style-type: none"> <li>• Among the most commonly identified new issues were effects of COVID-19; behavioral health; access to healthcare; unhealthy lifestyles; and child health.</li> </ul>
<b>Health Resources</b>	<ul style="list-style-type: none"> <li>• Commonly mentioned community assets included healthcare services; community and social services; community engagement; and support for health equity.</li> </ul>
<b>Working Together for Community Health Improvement</b>	<ul style="list-style-type: none"> <li>• A wide range of ideas were provided by the respondents. Collaboration ideas included COVID-19 response; healthcare services; supports for children; and to support people with disabilities.</li> </ul>
<b>Ideas and Suggestions for Promoting Better Health</b>	<ul style="list-style-type: none"> <li>• Commonly mentioned ideas included community and social services; healthcare services; supports for children; supports for healthy lifestyles; and supports for people with disabilities.</li> </ul>

## Summary Insights from Community Professionals (Section 2)

**Section 2** of the report presents results from the survey of community professionals. The survey was sent to 170 community professionals based on lists from the project partners. A total of 45 (26%) individuals submitted a response (although not every respondent answered every question). As with community residents, community professionals provided rich insights about community health needs and opportunities in the study region. The summary results are outlined below and presented in more detail in Section 2 of the report.

**Vulnerable or At-Risk Populations**

• The most commonly mentioned groups included the elderly population; minority population; low income population; people with behavioral health concerns; and people with disabilities.

**New Health Issues**

• Among the most commonly identified new issues were COVID-19; child health; behavioral health; disability-related issues and access to healthcare.

**Working Together for Community Health Improvement**

• Collaboration ideas included more community collaboration; community and social services; healthcare services; and healthy lifestyle supports.

**Ideas and Suggestions for Promoting Better Health**

• Commonly mentioned ideas included expanding healthcare services, community and social services; addressing health equity and supporting the low-income population.

## Summary Insights from Community Indicator Profiles (Section 3)

**Section 3** of the report provides a quantitative profile of the study region based on a wide array of community health indicators. To produce the profile, Community Health Solutions analyzed data from multiple sources. By design, the analysis does not include every possible indicator of community health. The analysis is focused on a set of indicators that provide broad insight into community health and for which there were readily available data sources. The summary results are outlined below and presented in more detail in Section 3 of the report.

### Community Demographics

- The total population of the study region is estimated at 105,276 people.
- Children age 0-17 represent 22% of the population.
- Seniors age 65+ represent 19% of the population.
- 13% percent of the population is Black/African American.
- 9% of the population is Hispanic.
- Counties vary in population size and percent distribution by age, race, and ethnicity.

### Social Determinants of Health

- 8% of individual residents have incomes below poverty.
- 9% of households have incomes below poverty.
- 12% of the population age 25+ is without a high school diploma.
- 9% of the population may have concerns about food insecurity.
- 15% of households may be struggling with housing.

### Health Risk Behaviors for Adults

- An estimated 81,760 adults age 18+ reside in the study region.
- Applying health district level survey data to the local population, an estimated:
  - 64% are overweight or obese.
  - 26% do not meet recommendations for physical activity.
  - 83% consume less than five servings of fruits and vegetables per day.
  - 20% are smokers.
  - 12% are at risk for binge drinking.

### Health Risk Behaviors for High School Youth

- An estimated 7,586 youth age 14-19 reside in the study region.
- Applying health district level survey data to the local population, an estimated:
  - 36% are overweight or obese.
  - 29% have used tobacco or vapor products.
  - 58% do not meet recommendations for physical activity.

### Access to Health Care

- An estimated 81,259 individuals age 0-64 lived in the study region in 2018.
- According to health insurance estimates from the US Census Bureau, and estimated 12% of individuals age 0-64 were uninsured at any point in 2018.
- The uninsured rate increases as income drops, with an uninsured rate of 22% for those with income below 138% of poverty.
- As of 2020, all three counties are fully or partly designated as medically underserved areas by the U.S. Health Resources and Services Administration.

<p><b>Leading Causes of Death</b></p>	<ul style="list-style-type: none"> <li>• In 2018 the five leading causes of death in the study region were malignant neoplasms (238), heart disease (212), accidents (72), chronic lower respiratory disease (51); and cerebrovascular disease (41).</li> </ul>
<p><b>Maternal and Infant Health</b></p>	<ul style="list-style-type: none"> <li>• In 2018 residents of the study region had:             <ul style="list-style-type: none"> <li>• 1,334 total pregnancies and 1,204 live births.</li> <li>• 509 non-marital births and 51 births to teenage mothers.</li> <li>• 90 low weight births</li> <li>• 5 infant deaths</li> </ul> </li> </ul>
<p><b>Cancer Incidence</b></p>	<ul style="list-style-type: none"> <li>• From 2013-2017, study region residents had 2,787 reported cases of cancer.</li> <li>• The most frequent cancer types by site were lung and bronchus (447), breast (423), prostate (305), and colorectal (236).</li> </ul>
<p><b>Communicable Disease Incidence</b></p>	<ul style="list-style-type: none"> <li>• In 2018 the most common communicable diseases reported in the study region were hepatitis C - chronic (161); Lyme disease (32); campylobacteriosis (23); spotted fever (18); and salmonellosis (17).</li> </ul>
<p><b>Injury and Violence</b></p>	<ul style="list-style-type: none"> <li>• In 2016 the study region had 80 deaths related to injury or violence, with the leading causes of death being poison (30), drug poisoning due to overdose (30), traumatic brain injury (24), motor vehicle traffic injury (14), and suicide (13).</li> <li>• In 2018 study region residents had 525 inpatient hospitalizations for injury or violence-related incidents, with the leading causes being unintentional fall (150), traumatic brain injury (115), firearm (99), drug poisoning due to overdose (82), and self-harm (47).</li> </ul>
<p><b>Potentially Avoidable Hospitalizations</b></p>	<ul style="list-style-type: none"> <li>• Some specifically-defined hospitalizations are potentially avoidable with adequate access to outpatient care and other health supports.</li> <li>• In 2018 study region residents had 1,148 potentially avoidable hospitalizations.</li> <li>• The leading diagnoses for these hospitalizations were congestive heart failure (377), COPD or asthma in older adults (270), community acquired pneumonia (193), diabetes (173), and urinary tract infection (94). Most of these hospitalizations were for residents age 65+.</li> </ul>
<p><b>Hospitalizations for Mental Health and Substance Use Diagnoses</b></p>	<ul style="list-style-type: none"> <li>• In 2018 study region residents had 600 hospitalizations for behavioral health conditions in Virginia community hospitals.</li> <li>• The leading causes of hospitalization were major depressive disorder - recurrent (142), alcohol related disorders (90), bipolar disorder (88), major depressive disorder - single episode (64), and schizoaffective disorders (39) and reaction to stress (39).</li> </ul>
<p><b>Adult Mental Health and Substance Use: Incidence and Prevalence</b></p>	<ul style="list-style-type: none"> <li>• An estimated 81,760 adults age 18+ reside in the study region :</li> <li>• An estimated 19% may have had any mental illness in the past year, and 4% may have had a serious mental illness in the past year.</li> <li>• An estimated 6% may have had an alcohol use disorder in the past year, and 3% may have had an illicit drug use disorder in the past year.</li> </ul>
<p><b>Child and Youth Mental Health and Substance Use: Incidence and Prevalence</b></p>	<ul style="list-style-type: none"> <li>• An estimated 19,926 children and youth age 3-17 reside in the study region.</li> <li>• An estimated 3-10% may have one or more of these conditions: ADD or ADHD, anxiety problems, depression, behavioral or conduct problems, or other cognitive or mental health conditions.</li> <li>• Among an estimated 7,911 study region residents age 12-17, an estimated 4% may have had a substance use disorder in the past year.</li> </ul>

## Summary Insights on Social Determinants of Health (Section 4)

**Section 4** presents community insights and data for exploring social determinants of health in the region. Social determinants of health (SDoH) have been defined as the conditions under which people are born, grow, live, work, and age, and include factors such as socioeconomic status, education, employment, social support networks, and neighborhood characteristics.<sup>2</sup> A growing body of research indicates that SDoH can be linked to a lack of opportunity and resources to protect, improve, and maintain health. The impacts of SDoH can be seen in disparities in health status and access to healthcare for individuals and populations.

Section 4 explores the results of the CHNA study from a SDoH perspective. Part A provides summary insights about SDoH from the survey of community residents and the survey of community professionals. Part B presents a set of maps that show where populations with SDoH risk reside within the counties and the regional overall. This type of geographic information can be helpful for planning efforts to reduce health disparities and increase health equity.

---

<sup>2</sup> American Academy of Family Physicians

## Section 1. Insights from Community Residents

To generate community input for the community health needs assessment, a *Community Insight Survey* was conducted with community residents. Insights were collected via surveys administered online. Four hundred and nine (409) community residents submitted a response (although not every respondent answered every question). The respondents provided rich insights about community health in the study region. This section presents the results of a survey of community residents from Culpeper, Madison, and Orange Counties.

### A. Survey Methods

The project partners began with a common aim to conduct an inclusive survey with insights from all demographic groups, including low-income and minority populations. The original plan was to accomplish this aim by conducting the survey using a two-pronged approach with online and paper surveys. Online surveys could be completed by community residents willing and able to do so. Paper surveys could be completed at various community sites where diverse people gather, including people with lower income and people from minority backgrounds.

The arrival of COVID-19 and the related protective measures made it impossible to conduct the survey on site at community locations. Consequently, all survey responses reported here were completed online. We recognize there could be many community members who would have completed a paper survey, including community members with lower income or lack of digital access. This is apparent in the survey results, which are under-representative of low-income and minority households relative to their overall proportion of the population. This occurred despite the project partners' extra efforts to reach out to members of these population segments. The project partners are committed to listening to and learning from these populations in a variety of ways as the community continues to open in the coming months.

It should also be noted that the surveys were conducted online using convenience sampling methods. Convenience sampling is a practical approach for obtaining insights from as many people as possible. It differs from probability sampling, which involves random selection of a smaller group of respondents that should be representative of the broader population. The results of a convenience sample are instructive for understanding the scope of issues and opportunities in a community; however, they are not necessarily representative of the entire community.

The survey results are presented in the following order:

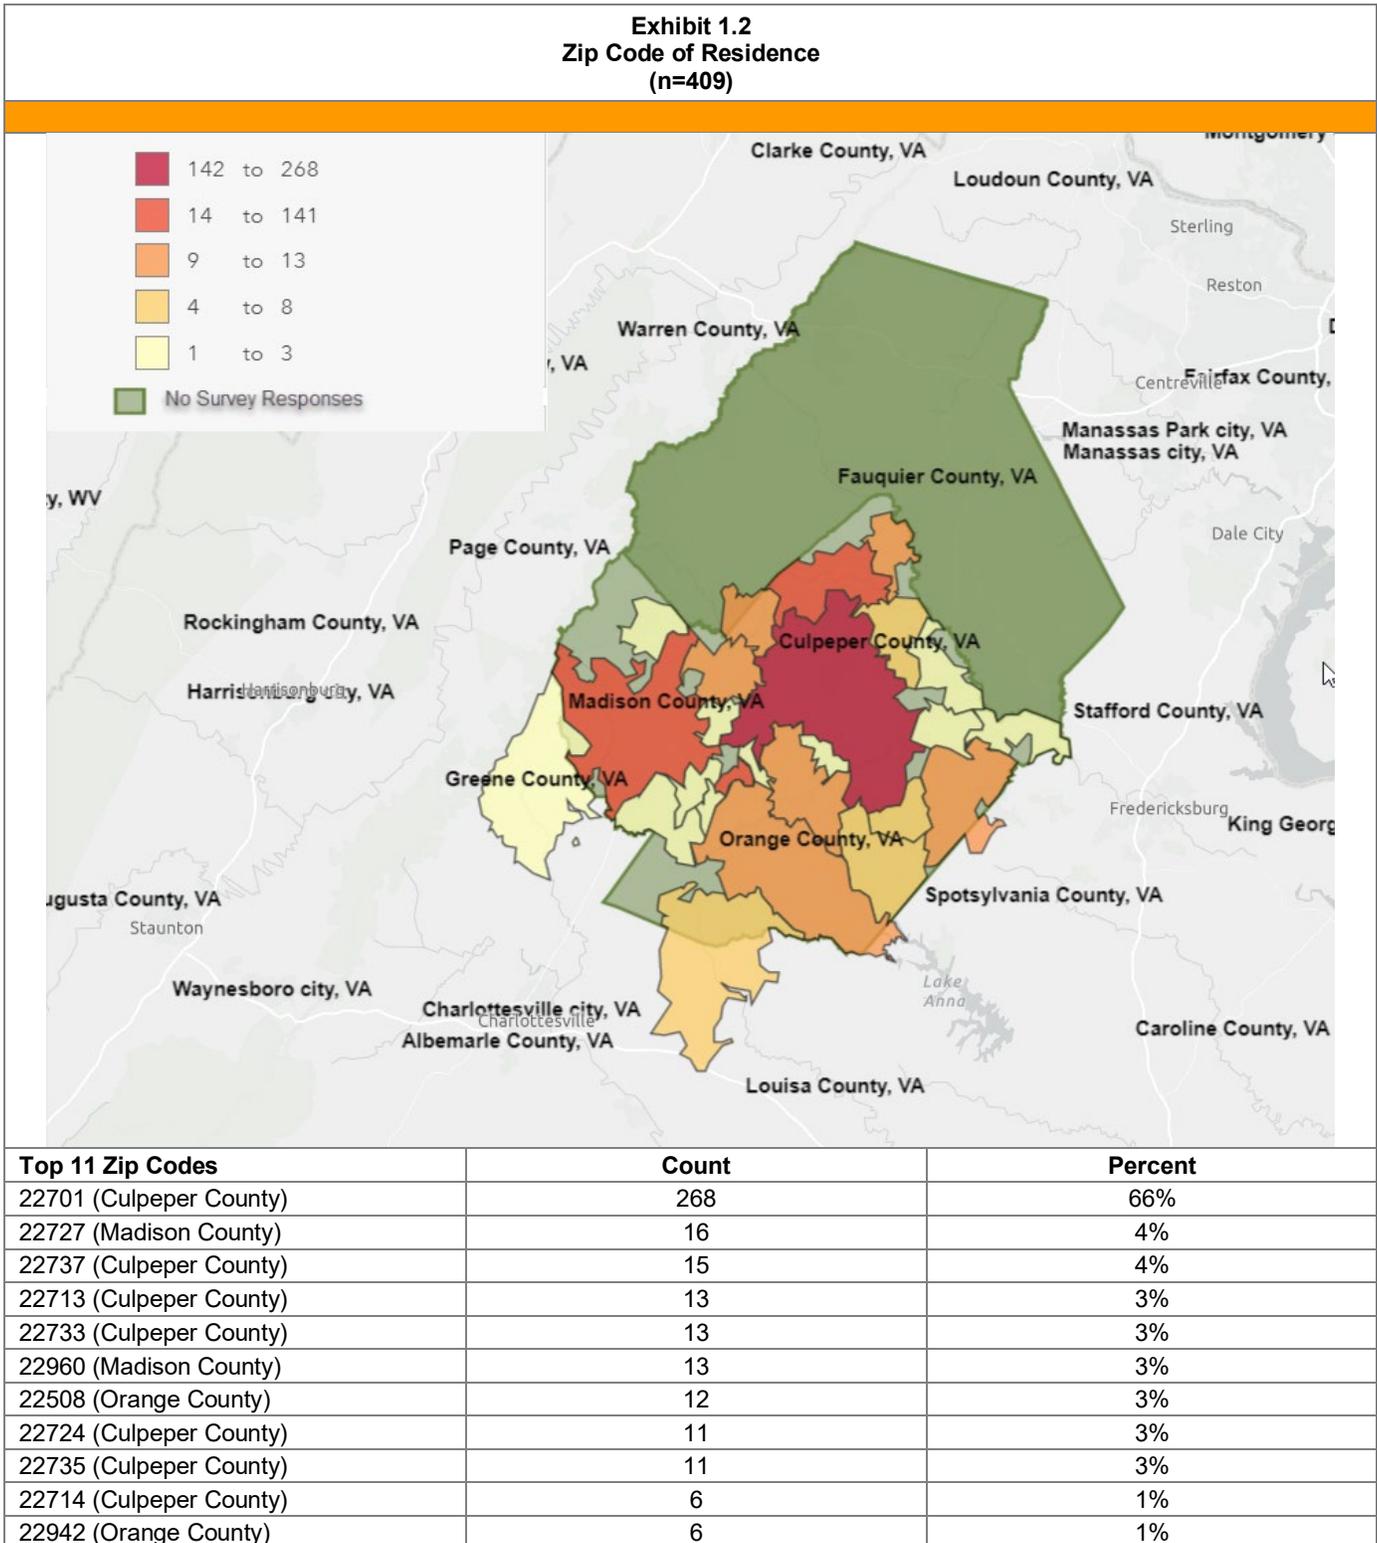

B	Demographic Profile
C	Community Needs Related to COVID-19
D	Neighborhood and Community Environment
E	Health Care Service Needs
F	Community Services
G	In their Own Words – Insights from Community Residents

## B. Demographic Profile

Community residents were asked to describe their demographic background. The resulting demographic profile of survey respondents is shown in **Exhibit 1.1**. (See notes in the survey overview regarding under-representation of low income and minority populations). Exhibit 1.2 shows the reported zip code of residence for survey respondents.

<b>Exhibit 1.1 Demographic Profile (n=409)</b>						
Category	Count	Percent		Category	Count	Percent
<b>Age (n=409)</b>				<b>Education (n=408)</b>		
18-24	5	1%		Less than High School	3	1%
25-34	34	8%		High School or GED	33	8%
35-44	84	21%		Some College	73	18%
45-54	81	20%		Associate's Degree	48	12%
55-64	88	22%		Bachelor's Degree	117	29%
65-74	93	23%		Master's Degree	107	26%
75-84	23	6%		Professional Degree	12	3%
85+	1	0%		Doctorate	15	4%
<b>Race (n=406)</b>				<b>Household Size (n=409)</b>		
Asian	6	1%		1	50	12%
American Indian or Alaska Native	1	0%		2	151	37%
Black or African American	24	6%		3	52	13%
Multiple Race	11	3%		4	86	21%
Pacific Islander	1	0%		5	35	9%
White	355	87%		More Than 5	35	9%
Other	8	2%		<b>School Aged Children in the Household (n=407)</b>		
<b>Ethnicity (n=403)</b>				Yes	156	38%
Hispanic, Latino, or Spanish origin	14	3%		No	251	62%
Non-Hispanic, Latino, or Spanish origin	389	97%		<b>Sources of Health Information (n=406)</b>		
<b>Gender (n=406)</b>				Health Care Provider (Example: Physician, Nurse Practitioner)	377	93%
Female	320	79%		Online Resources (Example: WebMD)	216	53%
Male	84	21%		Family Member	84	21%
Unknown	2	0%		Urgent Care	71	17%
<b>Income (n=401)</b>				Friends	151	19%
Less than \$25,000	13	3%		Social Media Resources (Example: Facebook)	73	9%
\$25,000-\$34,999	20	5%		Hospital Emergency Department	35	9%
\$35,000-\$49,999	29	7%		Local Health Department	31	8%
\$50,000-\$74,999	75	19%		Faith Based Organization	12	3%
\$75,000+	244	61%		Free Clinic	7	2%
Don't Know/Not Sure	20	5%				

Community residents were also asked to indicate the zip code where they live in the study region. The map and table in **Exhibit 1.2** show the number of survey responses received from residents of each zip code. (Please note some zip codes overlap county boundaries.)

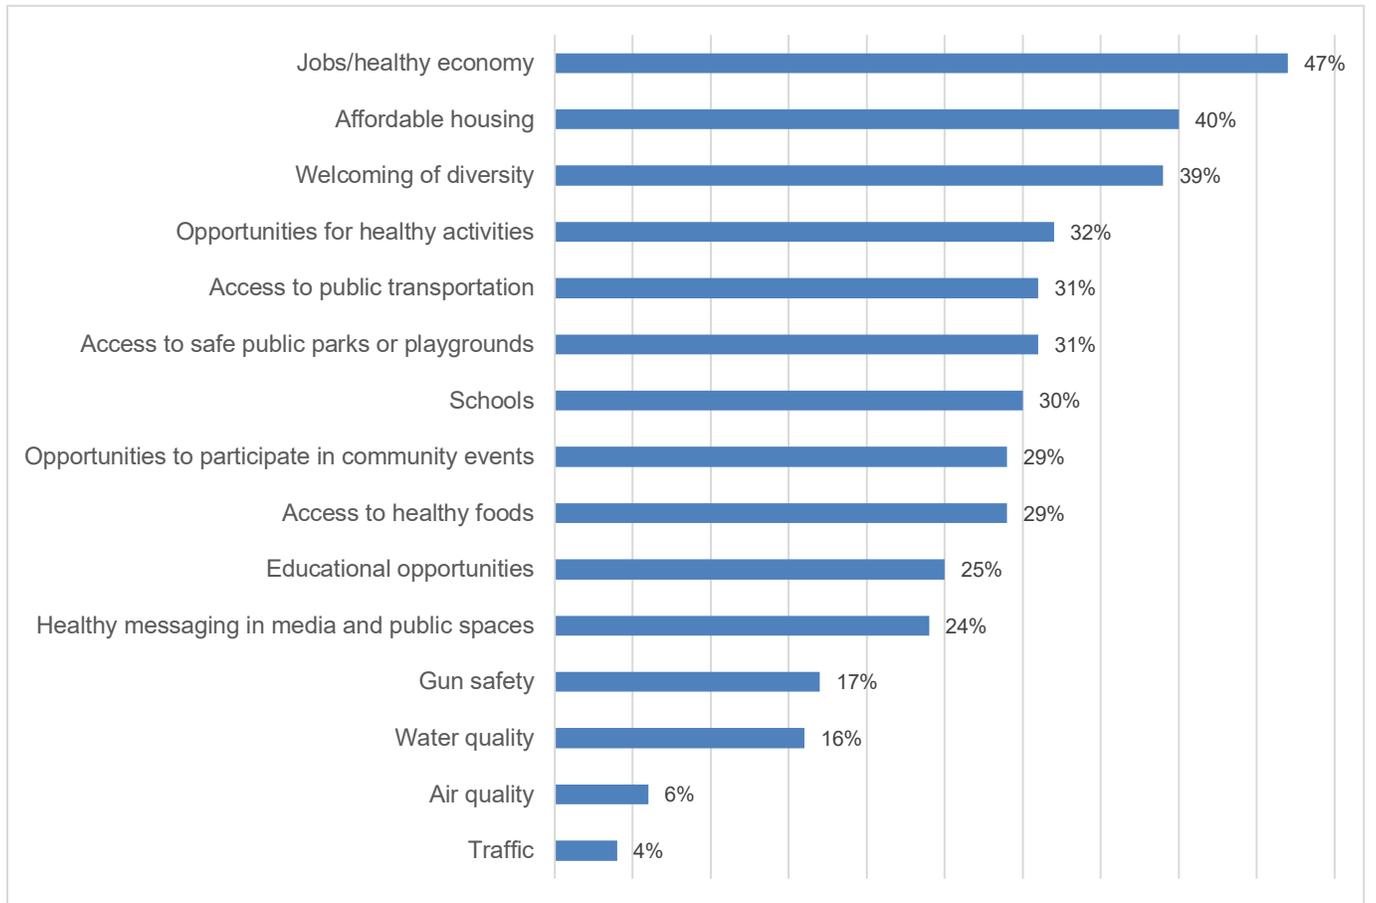

## D. Neighborhood and Community Environment

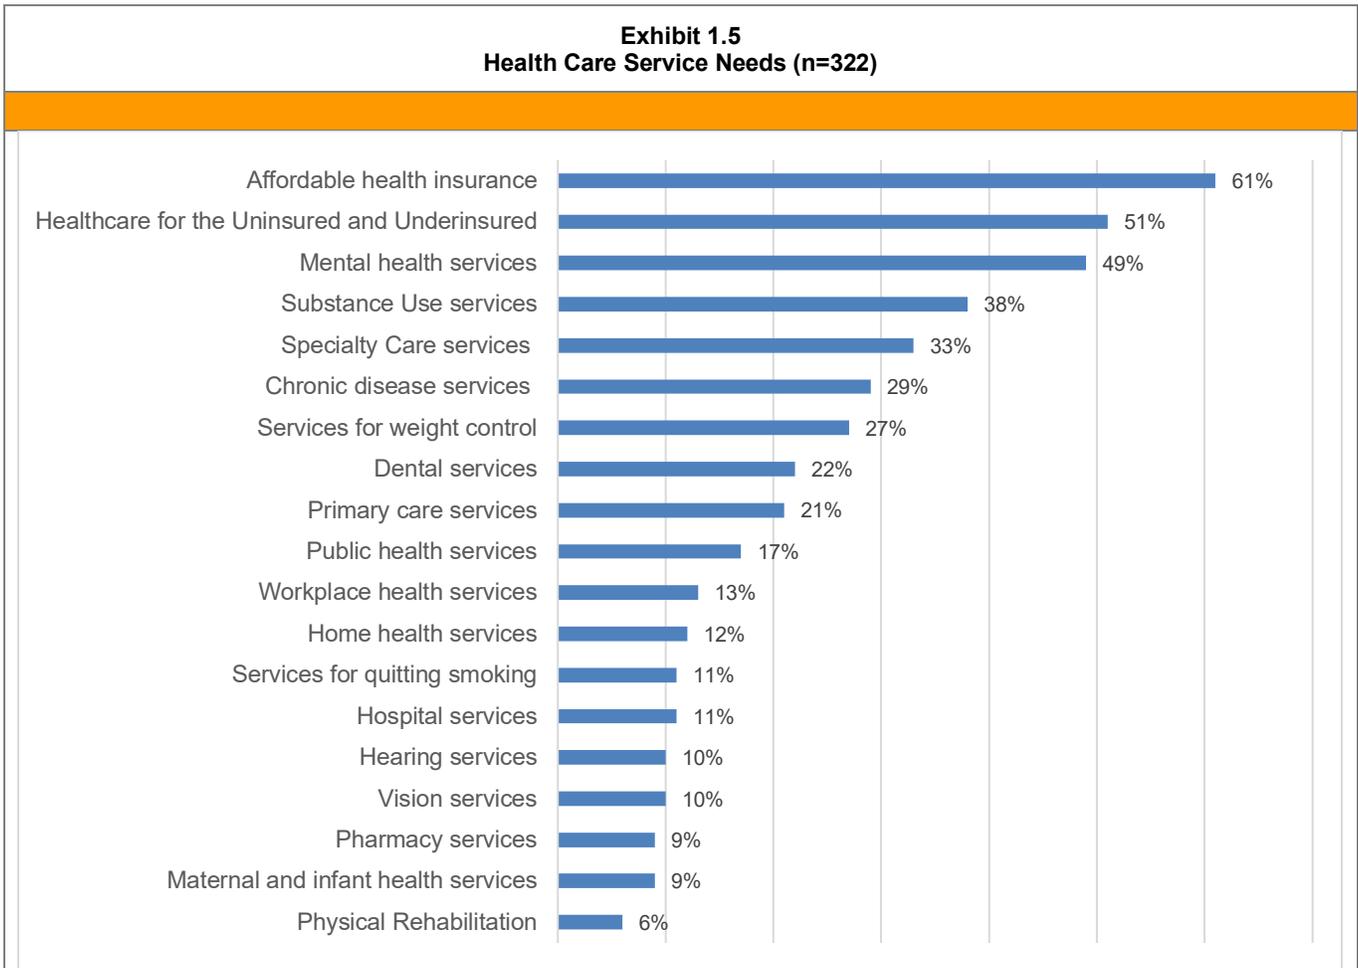

Widening the perspective beyond those issues directly related to COVID-19, community residents were asked to review a list of common community health needs and concerns and identify which of these needs are present in their community. The results are shown in **Exhibit 1.4**.

**Exhibit 1.4**  
**Neighborhood and Community Environment (n=315)**

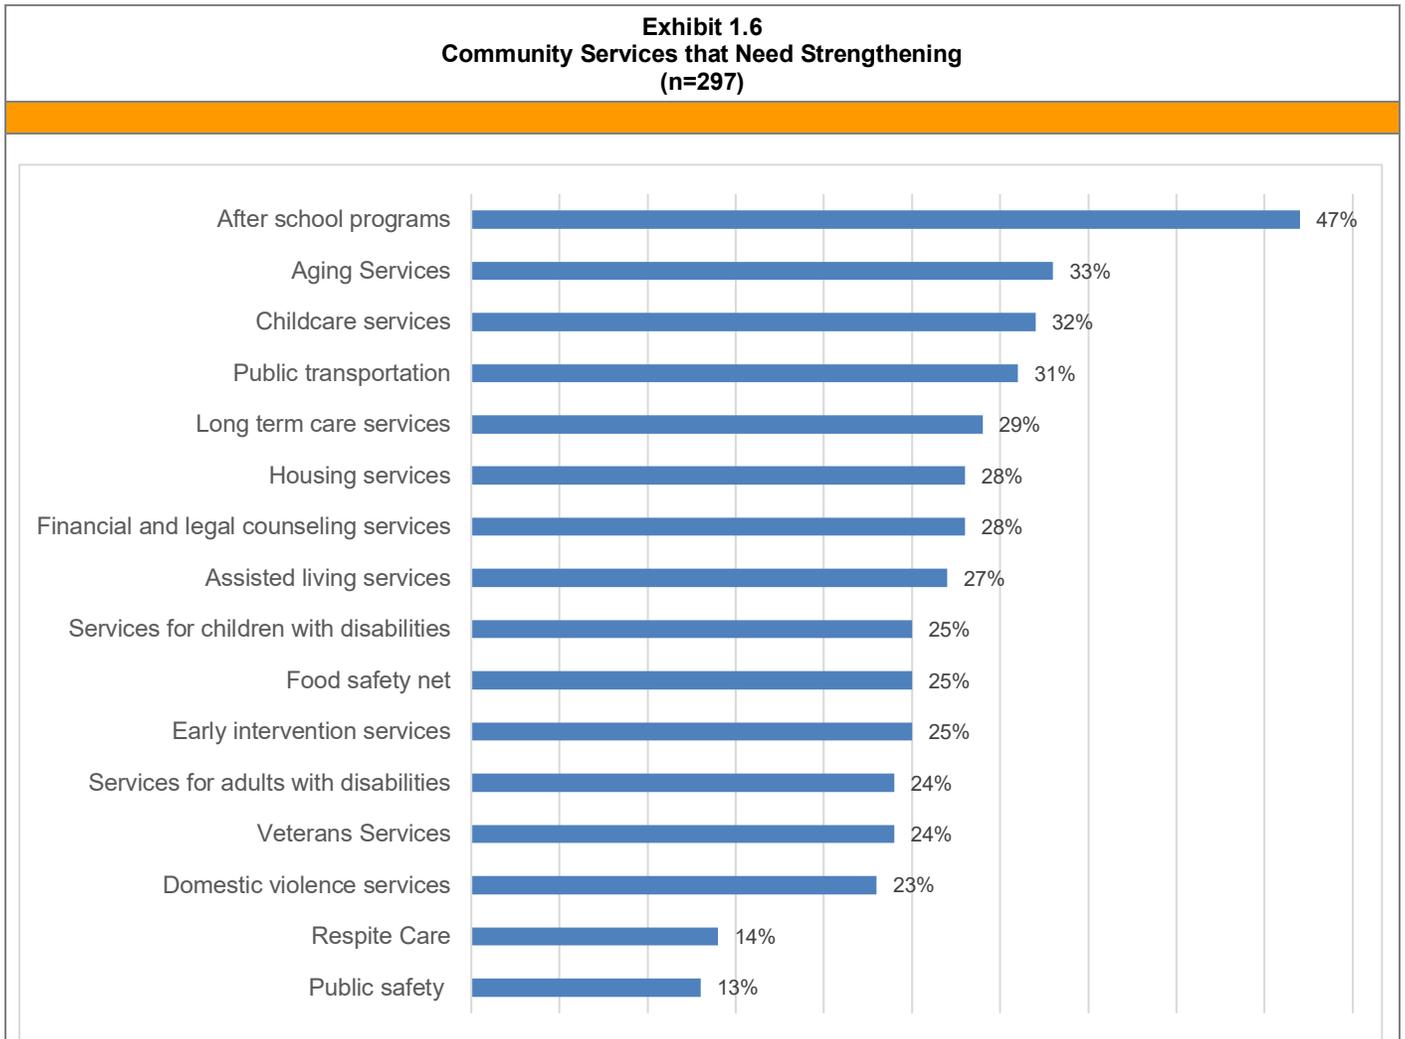

## E. Health Care Service Needs

Community residents were asked to review a list of common health services, and identify which services need strengthening in their community. The results are shown in **Exhibit 1.5**.

## F. Community Services

Community residents were asked to review a list of common community support services and identify which of those services need strengthening in their community. The results are shown in **Exhibit 1.6**.

## G. In Their Own Words – Insights from Community Residents

Community residents were asked to share in their own words their insights on the health and well-being of their community. **Exhibit 1.7** presents a summary of the **most common themes** and the associated number of responses. The most common themes are provided as a summary illustration, but they do not represent all the responses provided. The detailed responses are provided under separate cover.

<b>Exhibit 1.7</b>				
<b>In their Own Words – Insights from Community Resident Survey Respondents</b>				
<b>1. How would you define a healthy community? (n=406)</b>				
168 Access to Healthcare Services Medical, Dental, Behavioral Health	106 Access to Community & Social Services	85 Supports for Children	49 Supports for Healthy Lifestyles	49 Supports for People with Disabilities
<b>2. Are there particular groups of people within your neighborhood or community who need help obtaining better health? (n=360)</b>				
45 Elderly Population	32 Low Income Population	31 Minority Population	26 Child Population	21 People with Behavioral Health Concerns
<b>3. Are there any new health issues within your neighborhood or community that others may not be aware of, but could cause serious harm today or in the future? (n=273)</b>				
61 COVID-19 Issues	53 Behavioral Health Issues	50 Access to Health Care Issues	31 Unhealthy Lifestyle Issues	32 Child Health Issues
<b>1. In your view, what are the people, places or things that contribute the most to better health in your neighborhood or community? (n=354)</b>				
123 Healthcare Services	106 Community & Social Services	21 Community Engagement	16 Support for Health Equity	
<b>2. Please share your ideas about how people could work together to promote better health in your neighborhood or community (n=262)</b>				
65 COVID-19 Response	43 Healthcare Service	43 Supports for Children	25 Supports for People with Disabilities	
<b>3. Do you have any ideas on how local organizations can help you and others in your neighborhood or community achieve better health? (n=262)</b>				
55 Community & Social Services	47 Healthcare Services	29 Supports for Children	27 Supports for Healthy Lifestyles	21 Supports for People with Disabilities

## Section 2. Insights from Community Professionals

In addition to the survey of community residents described in Section 1, a second *Community Insight Survey* was conducted with a group of community professionals identified by the Planning District 9 Planning Workgroup. This section describes the methods, summary results, and detailed results for each section of the survey.

### A. Survey Methods

The survey was conducted online with a pool of potential respondents identified by the project partners from their existing lists of community contacts. One section of the survey included questions about community needs related to COVID-19. The other sections asked respondents for their insights about community health issues beyond COVID-19. The survey link was sent to a total of 170 community professionals based on lists from the project partners. A total of 45 (26%) individuals whose organizations serve the counties of Culpeper, Madison, and Orange submitted a response (although not every respondent answered every question).

### B. Organizational Affiliation and Geographic Perspective

Survey Responses were received from 45 community professionals from the organizations listed in **Exhibit 2.1**. Each respondent was asked to describe their geographic perspective in terms of the counties for which they would share insights on the survey. Most respondents identified multiple counties.

The survey results are presented in the following order:

B	Organizational Affiliation and Geographic Perspective
C	Community Needs Related to COVID-19
D	Community Health Concerns
E	Services and Supports that Need Strengthening
F	In their Own Words – Insights from Community Professionals

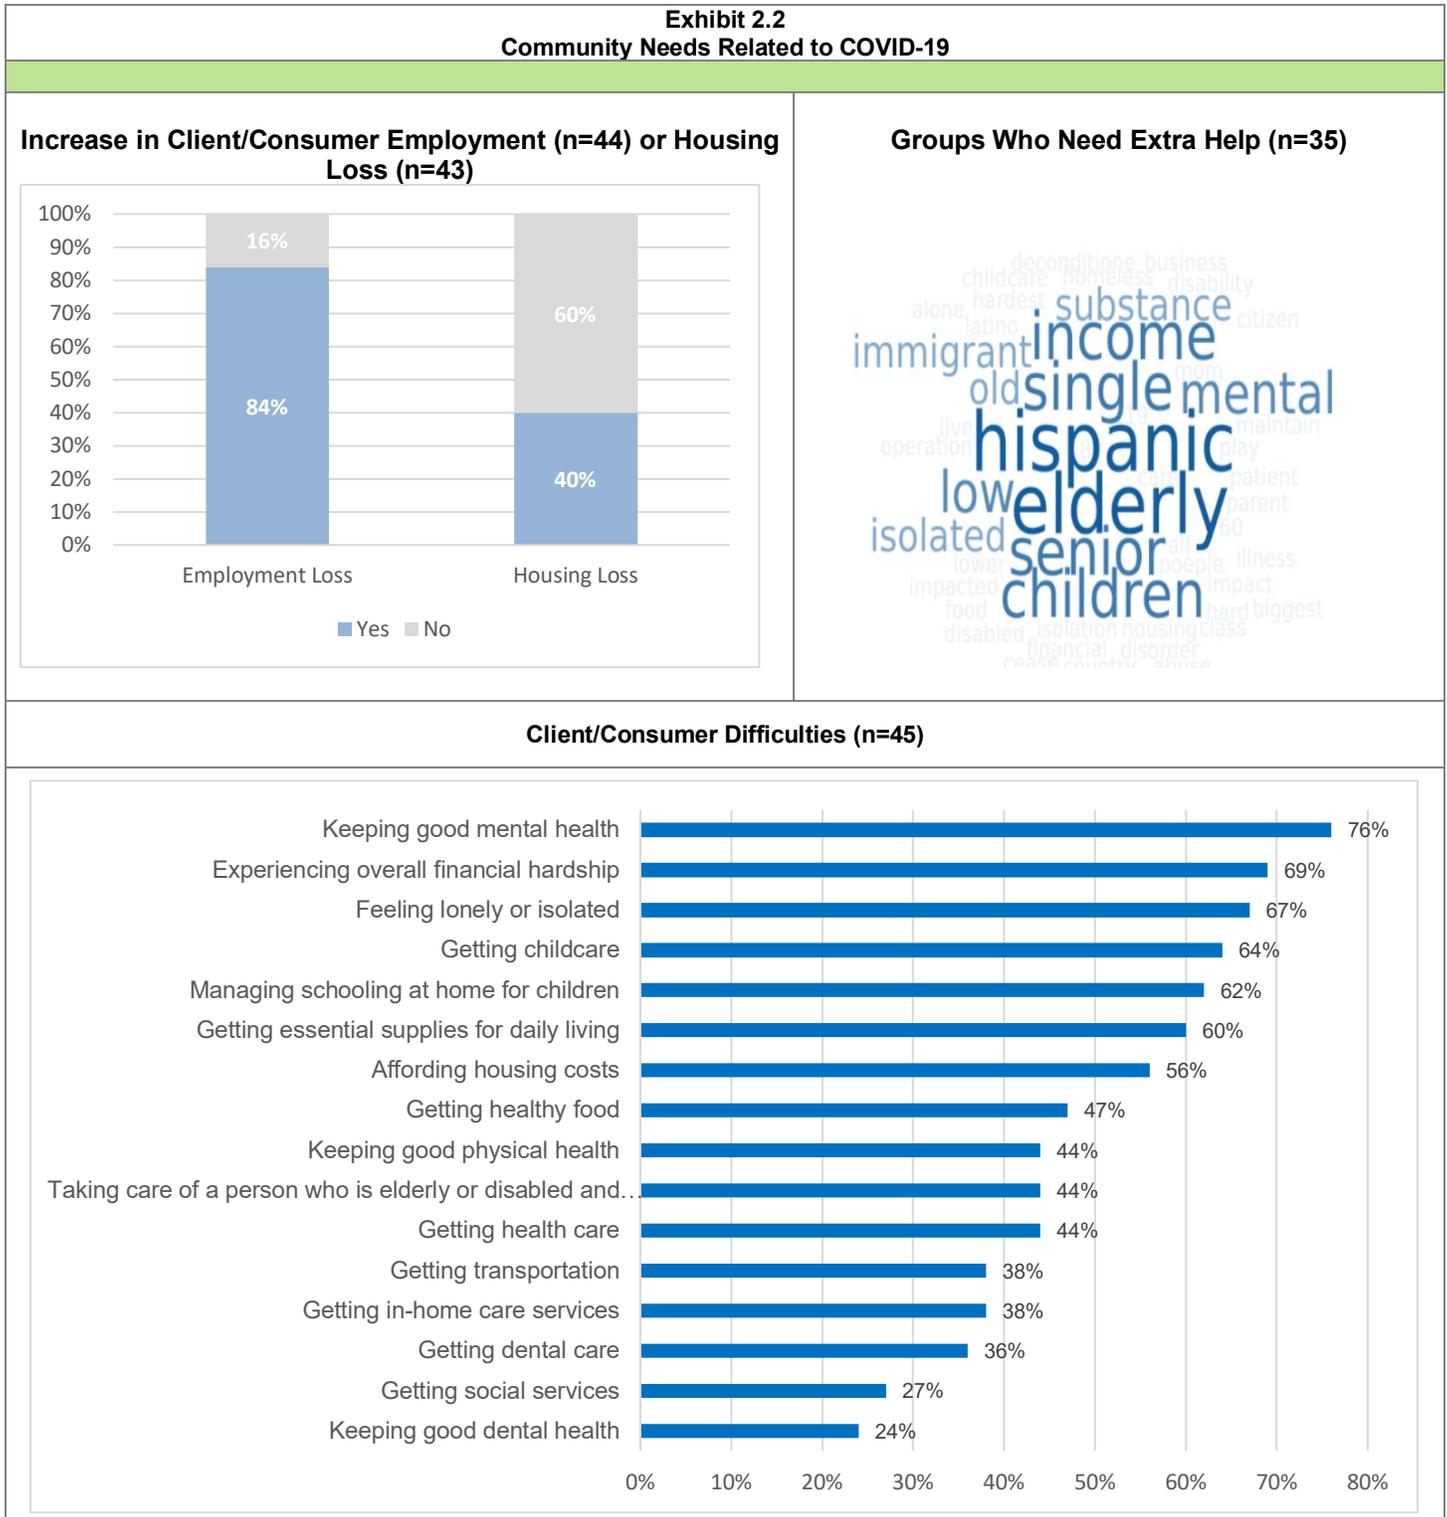

### C. Organizational Affiliation and Geographic Perspective

Survey Responses were received from 45 community professionals from the organizations listed in **Exhibit 2.1**. Each respondent was asked to describe their geographic perspective in terms of the counties for which they would share insights on the survey. Most respondents identified multiple counties.

<b>Exhibit 2.1 Organizational Affiliation and Geographic Perspective (n=45)</b>									
<b>By Organization</b> <i>A count denotes multiple respondents from the same organization.</i>									
<ul style="list-style-type: none"> <li><input type="checkbox"/> Aging Together</li> <li><input type="checkbox"/> Anonymous</li> <li><input type="checkbox"/> BRCCC</li> <li><input type="checkbox"/> Caring Angels Home Health</li> <li><input type="checkbox"/> Come As You Are, Inc.</li> <li><input type="checkbox"/> Culpeper Baptist Church</li> <li><input type="checkbox"/> Culpeper Chamber of Commerce</li> <li><input type="checkbox"/> Culpeper Hospital Auxiliary</li> <li><input type="checkbox"/> Culpeper Human Services (3)</li> <li><input type="checkbox"/> Culpeper Wellness Foundation (3)</li> <li><input type="checkbox"/> DARS</li> <li><input type="checkbox"/> Department of Social Services</li> <li><input type="checkbox"/> Families First - Healthy Families Culpeper (3)</li> <li><input type="checkbox"/> Fauquier Health</li> <li><input type="checkbox"/> FCCC</li> <li><input type="checkbox"/> Free Clinic of Culpeper (3)</li> <li><input type="checkbox"/> Horse and Soul Counseling</li> <li><input type="checkbox"/> Impactando Culpeper</li> <li><input type="checkbox"/> Madison DSS</li> <li><input type="checkbox"/> Madison Free Clinic</li> <li><input type="checkbox"/> Mental Health Assoc. and others.</li> <li><input type="checkbox"/> NH UVA Culpeper Medical Center</li> <li><input type="checkbox"/> nono</li> <li><input type="checkbox"/> Operation First Response</li> <li><input type="checkbox"/> Orange County Free Clinic</li> <li><input type="checkbox"/> PATH Foundation</li> <li><input type="checkbox"/> Piedmont Dispute Resolution Center</li> <li><input type="checkbox"/> Powell Wellness Center (4)</li> <li><input type="checkbox"/> Rappahannock center for education</li> <li><input type="checkbox"/> Virginia Department of Health (4)</li> <li><input type="checkbox"/> Virginia Cooperative Extension</li> </ul>	<table border="1" style="width: 100%;"> <thead> <tr> <th colspan="2" style="text-align: center;"><b>By Geographic Perspective</b> (Can select multiple)</th> </tr> </thead> <tbody> <tr> <td>Culpeper</td> <td style="text-align: right;">93%</td> </tr> <tr> <td>Madison</td> <td style="text-align: right;">49%</td> </tr> <tr> <td>Orange</td> <td style="text-align: right;">44%</td> </tr> </tbody> </table>	<b>By Geographic Perspective</b> (Can select multiple)		Culpeper	93%	Madison	49%	Orange	44%
<b>By Geographic Perspective</b> (Can select multiple)									
Culpeper	93%								
Madison	49%								
Orange	44%								

### D. Community Needs Related to COVID-19

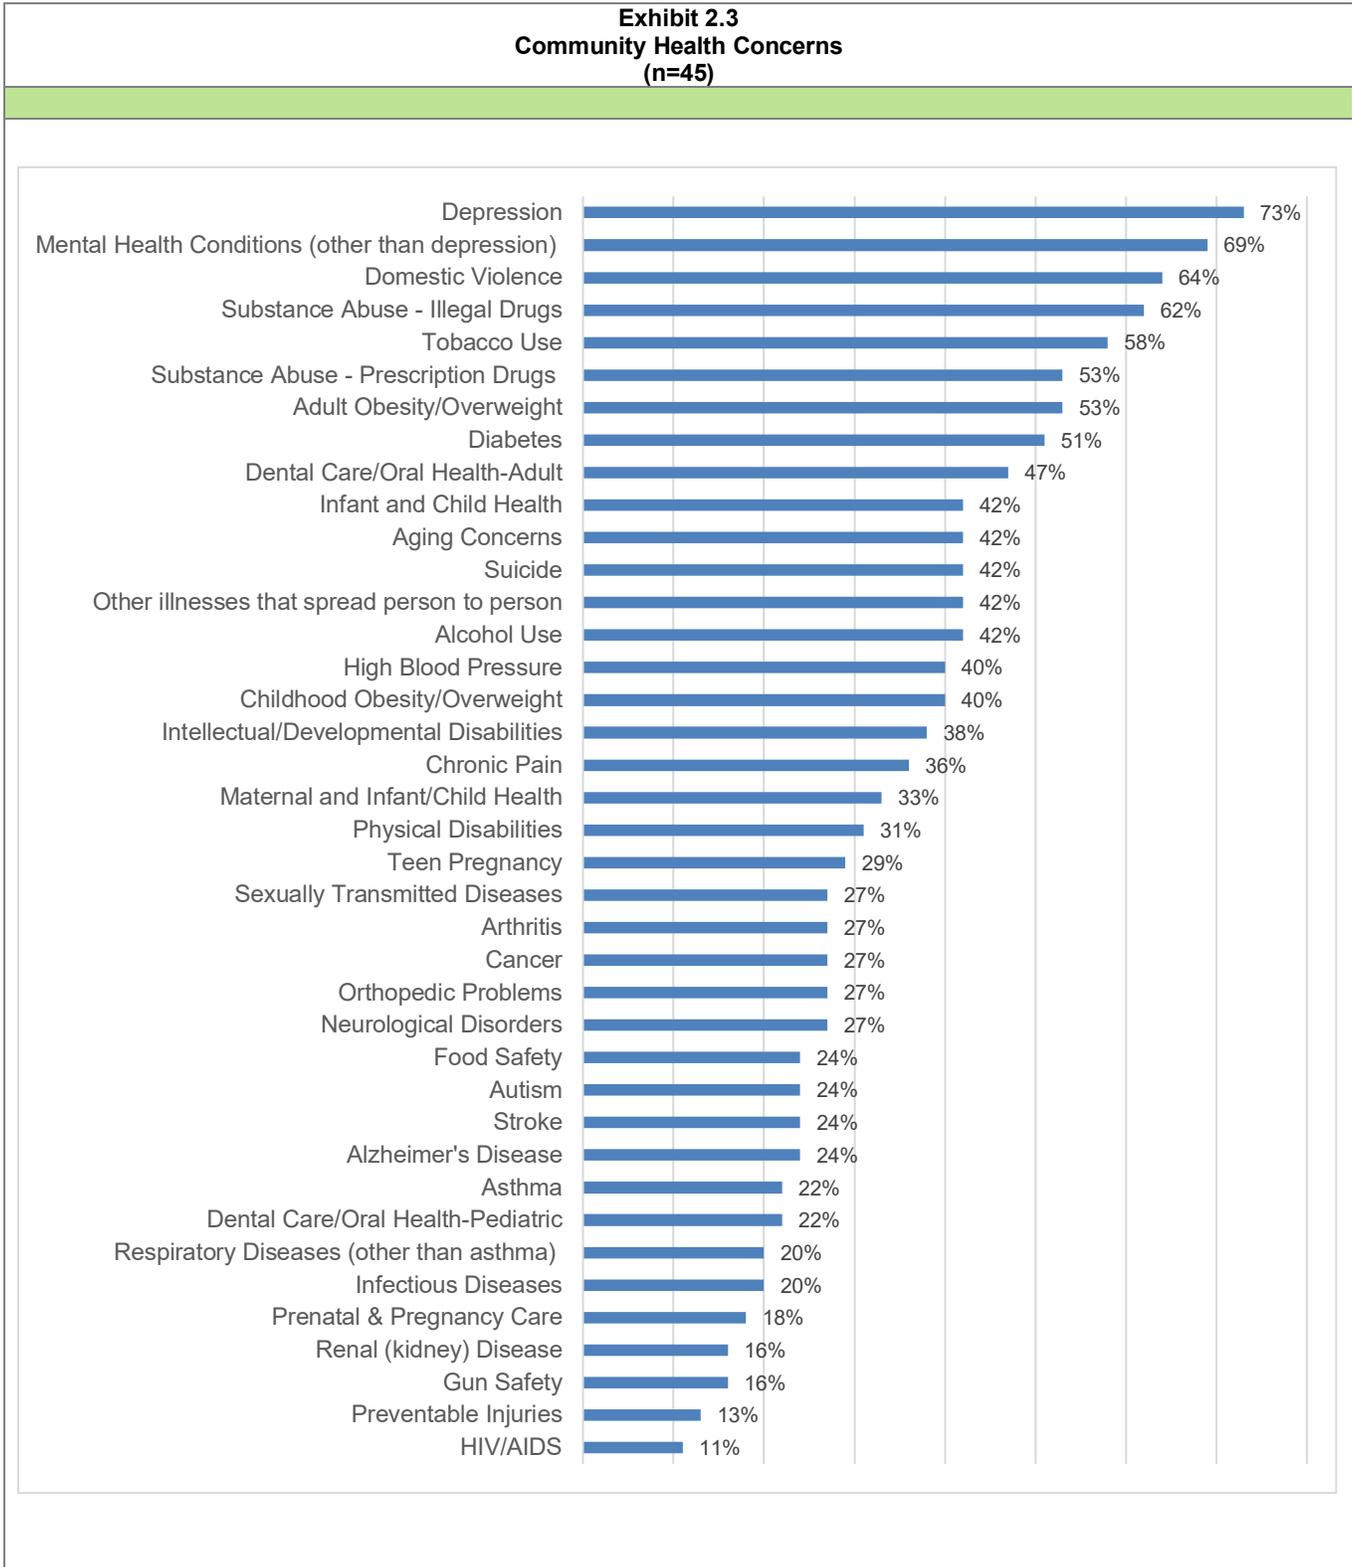

Community professionals were asked to share their insights on community needs specifically related to COVID-19. As shown in **Exhibit 2.2**, 84% said they have seen an increase in employment loss due to COVID-19, and 40% said they have seen an increase in housing loss. Survey respondents also identified multiple groups that need extra help due to COVID-19. They also shared their perceptions of client/consumer difficulty as shown in the bottom panel.

## E. Community Health Concerns

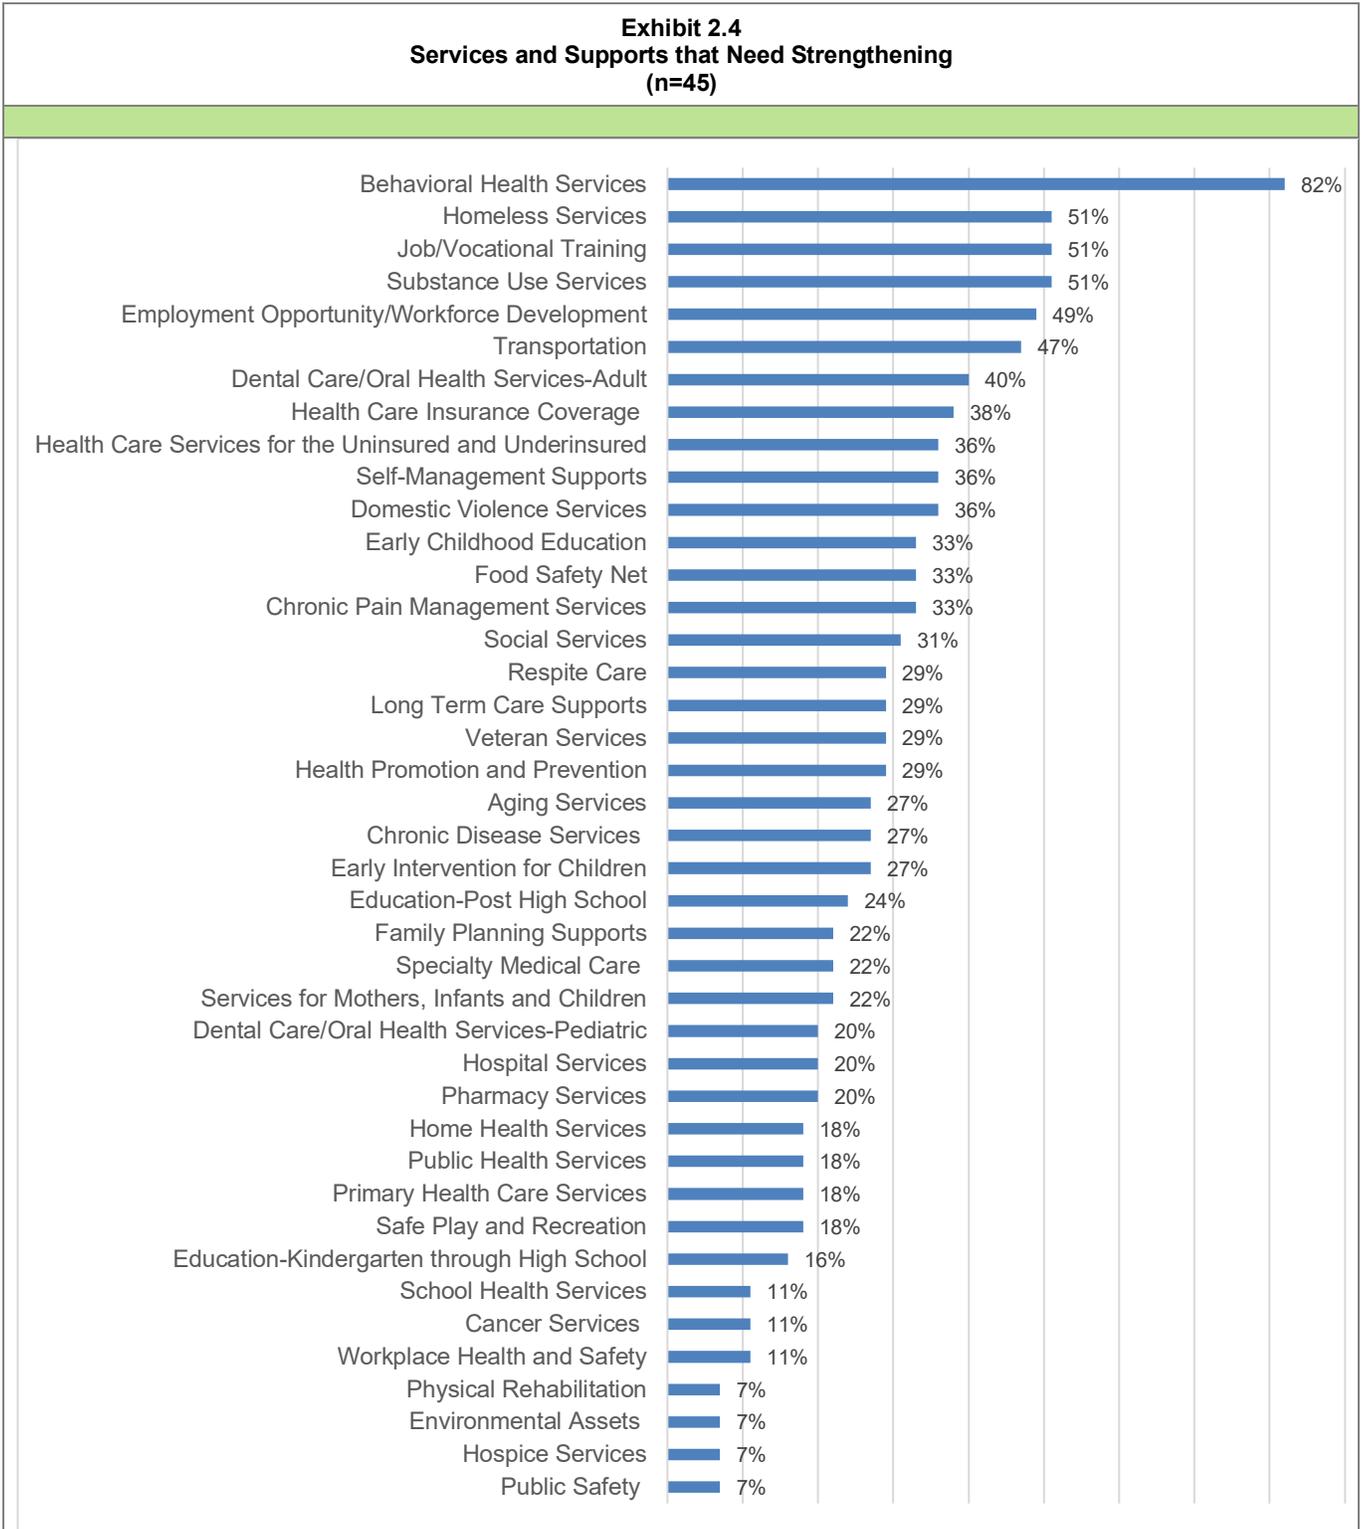

Community professionals were asked to review a list of common community health needs and identify which of these needs are present in their community. The results are shown in **Exhibit 2.3**.

**Exhibit 2.3**  
**Community Health Concerns**  
**(n=45)**

## F. Services and Supports that Need Strengthening

Community professionals were asked to review a list of common community services and supports, and identify which of those services need strengthening in their community. The results are shown in **Exhibit 2.4**.

**G. In Their Own Words – Insights from Community Professionals**

Community professionals were asked to share in their own words their insights on the health and well-being of their community. **Exhibit 2.5** provides a summary of the **most common themes** and the associated number of responses. The most common themes are provided as a summary illustration, but they do not represent all the responses provided. The detailed responses are provided under separate cover.

<b>Exhibit 2.5 In their Own Words – Insights from Community Professionals</b>				
<b>1. In your own words, how would you define the idea of a “healthy community”? (n=35)</b>				
14 Access to Healthcare (Medical, Dental, Behavioral)	8 Access to Community & Social Services	5 Supports for People with Behavioral Health Concerns	5 Healthy Lifestyle Supports	5 Supports for People with Disabilities
<b>2. In your view, what are the most important health assets within the community? (n=36)</b>				
17 Healthcare Services	20 Healthy Lifestyle Supports	16 Community and Social Services	8 Supports for Elderly	4 Supports for Children
<b>3. Are there particular groups within the community who are at greater risk for health problems or difficulties obtaining their best health? (n=39)</b>				
12 Elderly Population	13 Minority Population	10 Low Income Population	5 People with Behavioral Health Concerns	5 People with Disabilities
<b>4. Are there any new health issues within the community that may not be widely known yet, but could cause serious harm today or in the future? (n=19)</b>				
8 COVID-19 Issues	6 Child Health Issues	6 Behavioral Health Issues	3 Disability-Related Issues	3 Access to Healthcare
<b>5. Please share your ideas about how people could work together to promote optimal health in the community (n=31)</b>				
13 More Community Collaboration	7 Community & Social Services	6 Healthcare Services	3 Healthy Lifestyle Supports	
<b>6. Please share your additional ideas or suggestions (n=9)</b>				
4 Health Care Services	2 Community and Social Services	1 Health Equity	1 Low Income Population	

## Section 3. Community Indicator Profiles

This section of the report provides a quantitative profile of the study region based on a wide array of community health indicators. To produce the profile, Community Health Solutions analyzed data from multiple sources. By design, the analysis does not include every possible indicator of community health. The analysis is focused on a set of indicators that provide broad insight into community health and for which there were readily available data sources.

The results of this profile can be used to evaluate community health status compared to the Commonwealth of Virginia overall. The results can also be helpful for determining the number of people affected by specific health concerns. In addition, the results can be used alongside the survey results to help inform action plans for community health improvement.

The community data profiles are organized into two sections as outlined below. Health factors include demographics and other factors that can influence health status and access to health care for community populations. Health outcomes are indicators of the health status of community members.

<b>Health Factor Profiles</b>	<b>Health Outcome Profiles</b>

## A. Health Factors: Community Demographics

**Exhibit 3.1** provides a demographic profile of each county and the study region. Focusing on rates in the bottom panel, compared to Virginia as a whole, the study region is more rural, has a higher percentage of seniors age 65+, and is less racially and ethnically diverse.

<b>Exhibit 3.1 Community Demographics (2020)</b>						
<b>Indicator</b>		<b>Culpeper</b>	<b>Madison</b>	<b>Orange</b>	<b>Study Region Total</b>	<b>Virginia</b>
<b>Estimated Counts</b>						
Total Population	Population	53,428	13,914	37,934	105,276	8,684,166

## B. Health Factors: Social Determinants of Health

**Exhibit 3.2** shows selected social determinants of health for residents of each county and the study region as a whole. Social determinants of health are social and economic factors that can influence health and access to health care for individuals and populations. The results show there are substantial numbers of community residents with low income, without a high school diploma, with food insecurity, and housing problems. These factors can impact an individual's health status and access to health services and supports.

<b>Exhibit 3.2 Social Determinants of Health (Various Years)</b>						
<b>Indicator</b>		<b>Culpeper</b>	<b>Madison</b>	<b>Orange</b>	<b>Study Region Total</b>	<b>Virginia</b>
<b>Estimated Counts</b>						
Income	Total Population (Individual) in Poverty (2018)	3,986	1,070	2,984	8,040	893,580
	Total Households in Poverty (2018)	1,521	490	1,073	3,084	330,813

<sup>3</sup> Percentage of households with at least 1 of 4 housing problems: overcrowding, high housing costs, lack of kitchen facilities, or lack of plumbing facilities.

### C. Health Factors: Risk Behaviors for Adults

**Exhibit 3.3** shows selected health risk behaviors for adults by county and the study region. Health risk behaviors include lifestyle factors that can influence health including development of chronic disease. Please note that these figures are estimates derived by applying 2017/2018 health district level estimates to 2020 local demographics for the study region. They are subject to error and presented for planning purposes only. The results show there are substantial numbers of community residents who could reduce their health risks by improving their diet, reducing their body weight, engaging in physical activity, reducing alcohol consumption, and ceasing smoking.

<b>Exhibit 3.3 Adult Health Risk Behaviors (2020 Estimates)</b>						
<b>Indicator</b>		<b>Culpeper</b>	<b>Madison</b>	<b>Orange</b>	<b>Study Region Total</b>	<b>Virginia</b>
<b>Estimated Counts</b>						
Total Estimated Adults age 18+		40,591	11,065	30,104	81,760	6,826,775

## D. Health Factors: Risk Behaviors for Youth

**Exhibit 3.4** shows selected health risk behaviors for youth by county and the study region. Please note that all indicators in this profile are based on 2019 health district level estimates applied to 2020 local demographics for the study region. They are subject to error and presented for planning purposes only. The results show there are substantial numbers of community youth who could reduce their health risks by avoiding tobacco and vapor products, engaging in more physical activity, and sustaining healthier body weight.

<b>Exhibit 3.4 High School Youth Health Risk Behaviors (2020 Estimates)</b>						
<b>Indicator</b>		<b>Culpeper</b>	<b>Madison</b>	<b>Orange</b>	<b>Study Region Total</b>	<b>Virginia</b>

## E. Health Factors: Access to Health Care

Access to health care is essential for individual and population health. **Exhibit 3.5** provides indicators of access to health insurance for community residents. As shown, an estimated 9,759 community members may lack health coverage, with higher uninsured rates among lower-income populations. Looking beyond health coverage, **Exhibit 3.6** shows that all three counties in the study region have been designated as full or partial medically underserved areas by the U.S. Health Resources and Services Administration. The designations are based on several factors including primary care provider supply, infant mortality, prevalence of poverty and the prevalence of seniors age 65+.

Exhibit 3.5 Access to Health Coverage-Uninsured Population (2018 Estimates)						
Indicator		Culpeper	Madison	Orange	Study Region Total	Virginia
<b>Estimated Counts - Population</b>

## F. Health Outcomes: Leading Causes of Death

**Exhibit 3.7** shows the leading causes of death for each county and the study region as a whole. In 2018 the five leading causes of death in the study region were malignant neoplasms (238), heart disease (212), accidents (72), chronic lower respiratory disease (51); and cerebrovascular disease (41). Age-adjusted mortality rates were not available for the study region.

<b>Exhibit 3.7 Mortality (2018)</b>					
<b>Indicator</b>	<b>Culpeper</b>	<b>Madison</b>	<b>Orange</b>	<b>Study Region Total</b>	<b>Virginia</b>
<b>Counts- Deaths by Leading Cause</b>

## G. Health Outcomes: Maternal and Infant Health

**Exhibit 3.8** shows indicators of maternal and infant health for each county and the study region. In 2018 there were 1,204 total live births, with 90 low weight births, 509 non-marital births, and 51 births to teens. The study region also had 5 infant deaths during 2018.

<b>Exhibit 3.8 Maternal and Infant Health (2018)</b>

## H. Health Outcomes: Cancer Incidence

**Exhibit 3.9** shows reported cancer incidence for each county and the study region as a whole. for 2013-2017. Over this period, study region residents had 2,787 reported cases of cancer. The most frequent cancer types by site were lung and bronchus (447), breast (423), prostate (305), and colorectal (236).

<b>Exhibit 3.9 Cancer Incidence (2013-2017)</b>

## I. Health Outcomes: Communicable Disease Incidence

**Exhibit 3.10** shows the incidence of communicable disease for each county and the study region as a whole. In 2018 the most reported communicable diseases were hepatitis C - chronic (161): Lyme disease (32): campylobacteriosis (23): spotted fever (18): and salmonellosis (17). Local rates of incidence were higher than Virginia rates for each of these conditions.

<b>Exhibit 3.10 Communicable Disease (2018)</b>					
<b>Indicator</b>	<b>Culpeper</b>	<b>Madison</b>	<b>Orange</b>	<b>Study Region Total</b>	<b>Virginia</b>
<b>Counts- Communicable Disease Incidence by Leading 10 Conditions</b>					
Hepatitis C, chronic	112	11	38	161	10,405
Lyme disease	23	4	5	32	1,139

## J. Health Outcomes: Injury and Violence

This section presents indicators of deaths and hospitalizations due to injury and violence. **Exhibit 3.11** shows indicators of deaths by injury and violence for each county and the study region. In 2016 the study region had 80 deaths related to injury or violence, with the leading causes of death being poison (30), drug poisoning due to overdose (30), traumatic brain injury (24), motor vehicle traffic injury (14), and suicide (13). Crude death rates were higher than the Virginia rates for total deaths, and deaths due to poison, and drug poisoning due to overdose. Age-adjusted death rates were not available for this analysis.

<b>Exhibit 3.11 Injury and Violence Deaths (2016)</b>					
<b>Indicator</b>	<b>Culpeper</b>	<b>Madison</b>	<b>Orange</b>	<b>Study Region Total</b>	<b>Virginia</b>
<b>Counts – Deaths by Leading Cause</b>					
Injury and Violence Related Deaths	30	14	36	80	5,154
Poison (non-drug)	12	2	16	30	1,027
Drug Poisoning (Overdose)	12	2	16	30	1,430

Source: Community Health Solutions analysis of data from Virginia Department of Health. See Appendix B: Data Sources for details					

**Exhibit 3.12** shows hospitalizations due to injury and violence for each county and the study region. In 2018 study region residents had 525 inpatient hospitalizations for injury or violence-related incidents, with the leading causes being unintentional fall (150), traumatic brain injury (115), firearm (99), drug poisoning due to overdose (82), and self-harm (42). Age-adjusted hospitalization rates were higher than Virginia rates for each of these causes except drug poisoning due to overdose.

<b>Exhibit 3.12 Injury and Violence-Hospitalization (2018)</b>					
Indicator	Culpeper	Madison	Orange	Study Region Total	Virginia
<b>Counts- Injury and Violence Related Discharges</b>					
Injury and Violence Related Discharges	216	65	244	525	32,021

## K. Health Outcomes: Potentially Avoidable Hospitalizations

**Exhibit 3.13** shows indicators of potentially avoidable hospitalizations for each county and the study region. These hospitalizations are potentially avoidable with adequate access to outpatient care and other health supports. Case are defined using specific diagnosis and procedure codes as noted in **Appendix A**.

In 2018 study region residents had 1,148 potentially avoidable hospitalizations, with most being for residents age 65+. The leading diagnoses for these hospitalizations were congestive heart failure (377), COPD or asthma in older adults (270), community acquired pneumonia (193), diabetes (173), and urinary tract infection (94). The age-adjusted rate of these hospitalizations was generally higher in the study region than for Virginia as a whole.

<b>Exhibit 3.13 Potentially Avoidable Hospitalizations (2018)</b>					
Indicator	Culpeper	Madison	Orange	Study Region Total	Virginia
<b>Counts- Discharges by Leading Diagnosis</b>					
Total PQI Discharges by All Diagnoses	525	129	494	1,148	69,654

## L. Health Outcomes: Mental Health and Substance Use

This section presents indicators of mental health and substance use for each county and the study region. Focusing first on hospitalizations, **Exhibit 3.14** shows that study region residents had 600 discharges from Virginia community hospitals for behavioral health conditions in 2018. The leading causes of hospitalization were major depressive disorder - recurrent (142), alcohol related disorders (90), bipolar disorder (88), major depressive disorder - single episode (64), and schizoaffective disorders (39).

<b>Exhibit 3.14 Hospitalization for Mental Health and Substance Use Diagnoses (2018)</b>					
Indicator	Culpeper	Madison	Orange	Study Region Total	Virginia
<b>Counts-Discharges by Leading Diagnosis</b>					
Total BH Discharges by All Diagnoses	247	63	290	600	66,201

-- Rates are not calculated where the number of discharges is less than 30. Source: Community Health Solutions analysis of data from Virginia Health Information, Inc. and demographic estimates from ESRI. See Appendix B: Data Sources for details					

**Exhibit 3.15** shows indicators of adult mental health and substance use for each county and the study region. Please note that these figures are estimates derived by applying 2017/2018 health district estimates to 2020 local demographics for the study region. They are subject to error and presented for planning purposes only.

Among an estimated 81,760 adults age 18+ in the study region, an estimated 19% may have had a mental illness in the past year, and an estimated 4% may have had a serious mental illness in the past year. An estimated 6% may have had an alcohol use disorder in the past year, and 3% may have had an illicit drug use disorder in the past year.

<b>Exhibit 3.15</b>						
<b>Estimated Prevalence of Adult Mental Health and Substance Use (2020 Estimates)</b>						
<b>Indicator</b>		<b>Culpeper</b>	<b>Madison</b>	<b>Orange</b>	<b>Study Region Total</b>	<b>Virginia</b>
<b>Estimated Counts</b>						
Total Estimated Adults age 18+		40,591	11,065	30,104	81,760	6,826,775

Source: Community Health Solutions analysis of data from Virginia Department of Health Behavioral Risk Factor Surveillance System, National Surveys on Drug Use and Health State Prevalence Estimates, and demographic estimates from ESRI. See Appendix B: Data Sources for details						

**Exhibit 3.16** shows indicators of mental health and substance use for children and youth. As with the adult estimates in Exhibit 3.14, these figures are estimates derived by applying 2017/2018 health district estimates to 2020 local demographics for the study region. They are subject to error and presented for planning purposes only.

Among an estimated 19,926 study region residents age 3-17, an estimated 3%-10% may have one or more behavioral health conditions including: ADD or ADHD, anxiety problems, depression, behavioral or conduct problems, or other cognitive or mental health conditions. Among an estimated 7,911 study region residents age 12-17, an estimated 2% may have had an alcohol use disorder in the past year, and 3% may have had an illicit drug use disorder in the past year.

## Section 4. Social Determinants of Health

Social determinants of health (SDoH) have been defined as the conditions under which people are born, grow, live, work, and age, and include factors such as socioeconomic status, education, employment, social support networks, and neighborhood characteristics.<sup>6</sup> A growing body of research indicates that SDoH can be linked to a lack of opportunity and resources to protect, improve, and maintain health. The impacts of SDoH can be seen in disparities in health status and access to healthcare for individuals and populations.

This section explores the results of the CHNA study from an SDoH perspective. Part A provides summary insights about SDoH from the survey of community residents the survey of community professionals. Part B presents a demographic profile of the region that may be helpful for understanding where populations with SDoH risk reside. This type of geographic information can be helpful for planning efforts to reduce health disparities and increase health equity.

### A. Insights from Surveys of Community Residents and Community Professionals

Respondents to both surveys were asked if there are particular groups of people within their neighborhood or community who need help obtaining better health. As shown in **Exhibit 4.1**, the most frequently identified populations are shown in the exhibit below, along with a list of specific mentions. Members of these populations have one or more social determinants of health that could influence their health status and access to health services and supports. The list is consistent with research on populations at higher risk for health challenges because of one or more social determinants of health.

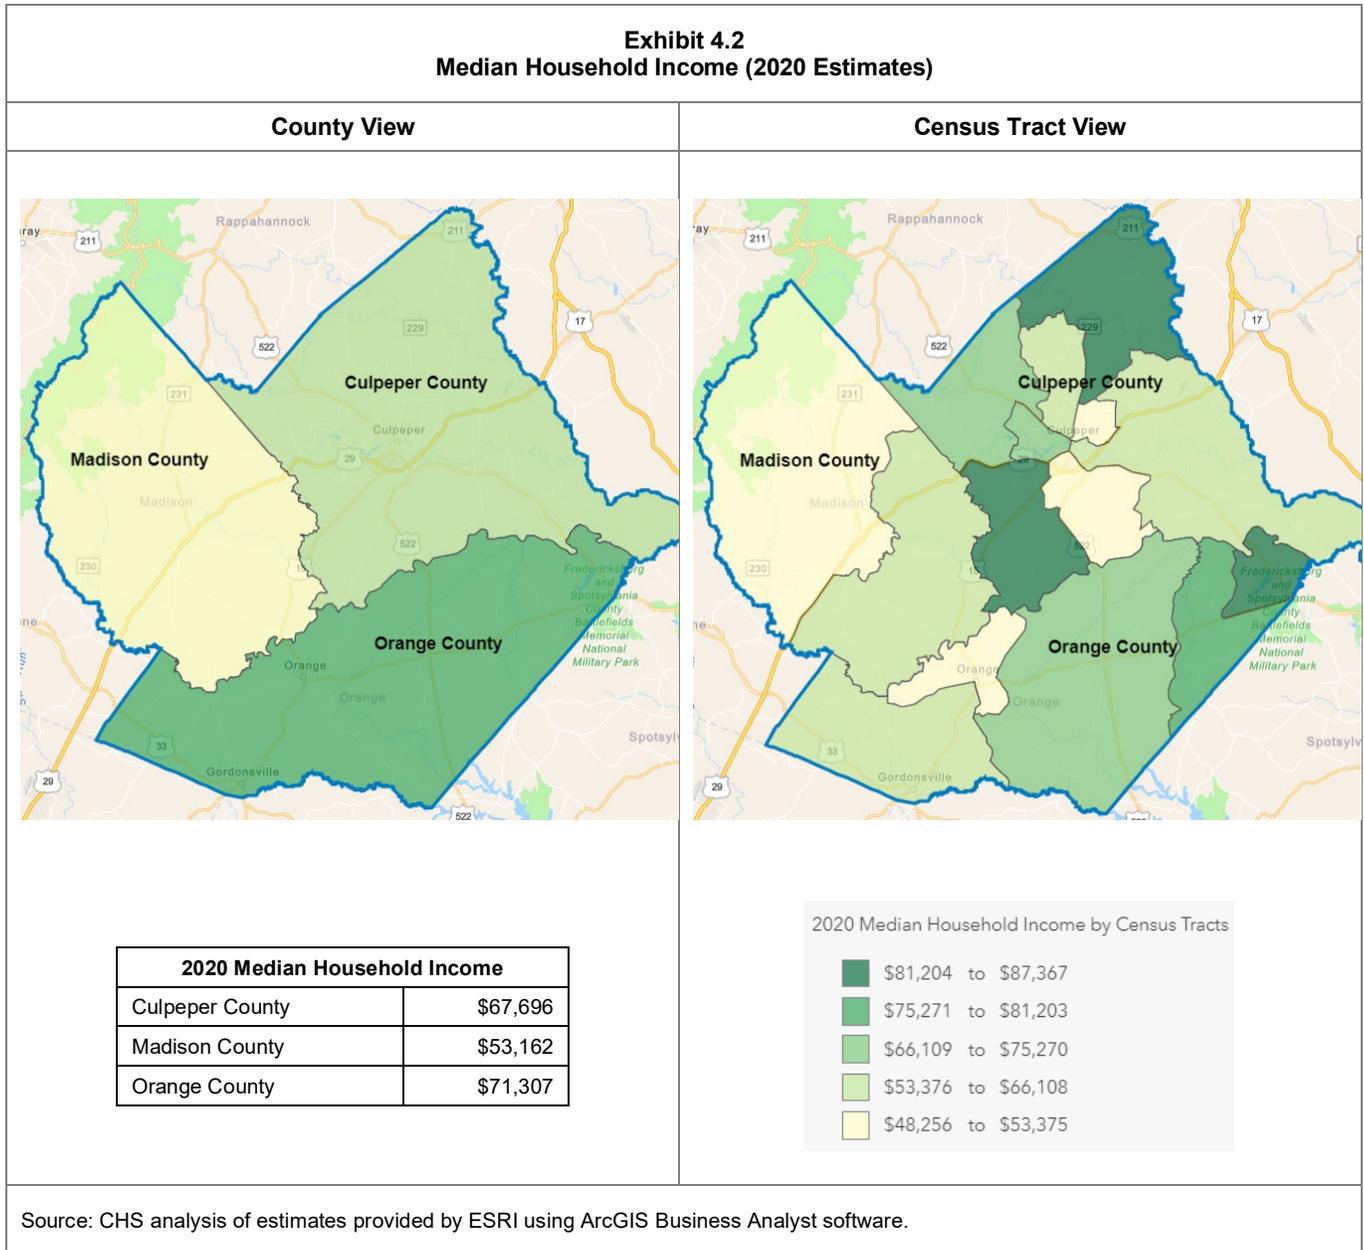

<b>Exhibit 4.1</b>				
<b>Insights about Vulnerable Populations from Community Residents and Community Professionals</b>				
<b>Most Frequently Identified Populations in the Survey of Community Residents (n=159)</b>				
45 Elderly Population	32 Low Income Population	31 Minority Population	26 Child Population	21 People with Behavioral Health Concerns

## B. Community Mapping of SDoH Indicators

For purposes of assessment and planning it is helpful to understand where populations with SDoH risk factors reside in the community. The following exhibits provide maps and data for four SDoH indicators including low income, minority status, disability, and aging. There are many additional SDoH not shown here. The indicators shown are intended as a starting point for further analysis of SDoH factors in local communities.

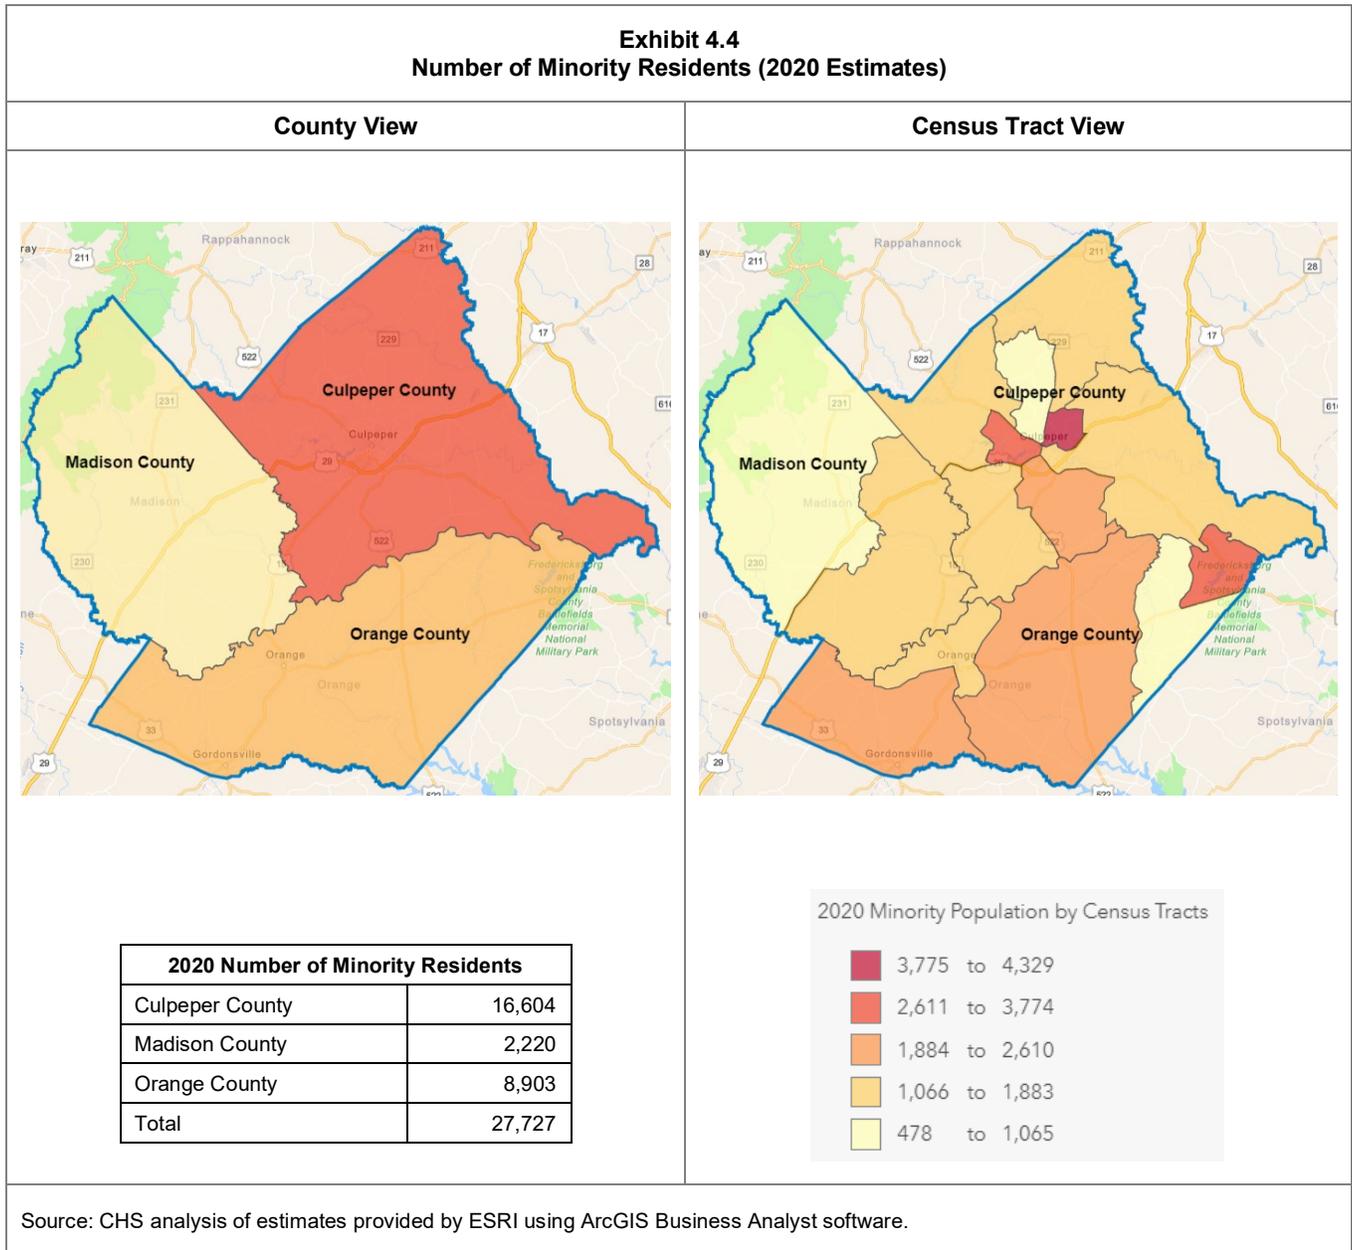

**Exhibit 4.2** shows the estimated median household income at the county and census tract level as of 2020. County indicators range from \$71,307 in Orange County to \$53,162 in Madison County. At the census tract level, the range expands from a low of \$48,256 to a high of \$87,367. The lighter census tracts are the areas with the lowest median household income.

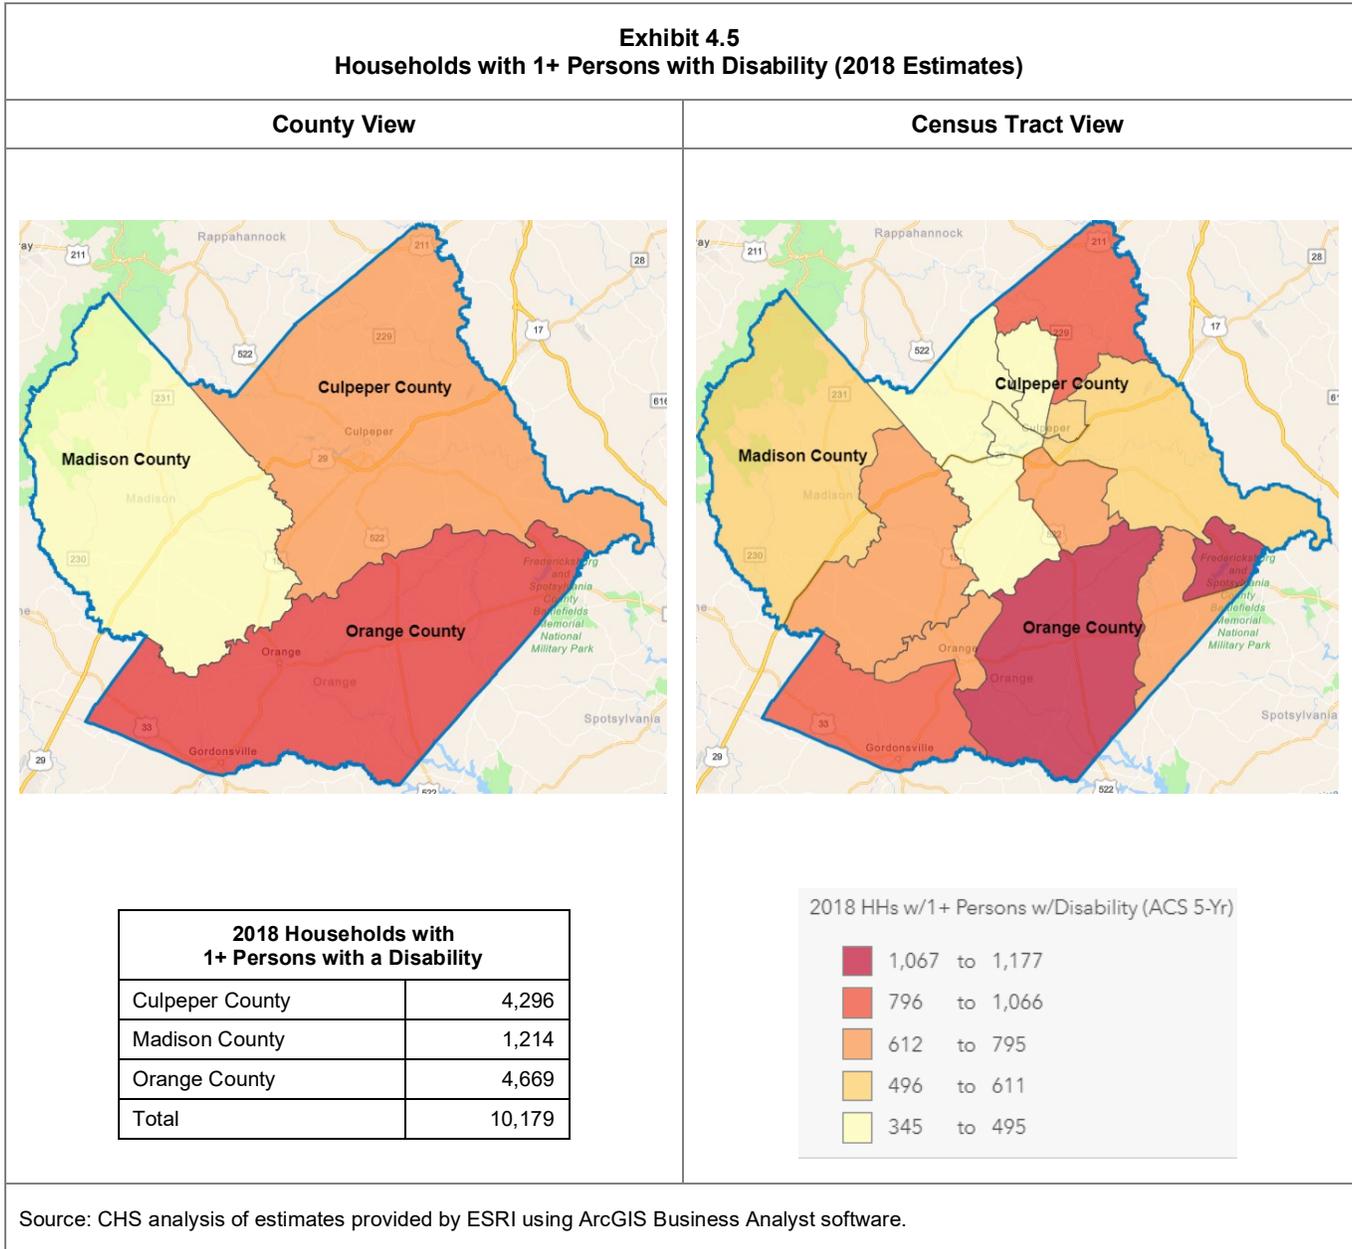

**Exhibit 4.3** shows the estimated number of households with income below poverty as of 2018. The county view shows a total of 1,715 households with income below poverty in 2018, along with the county-level figures. The census tract view shows where households in poverty are located within counties and across the region.

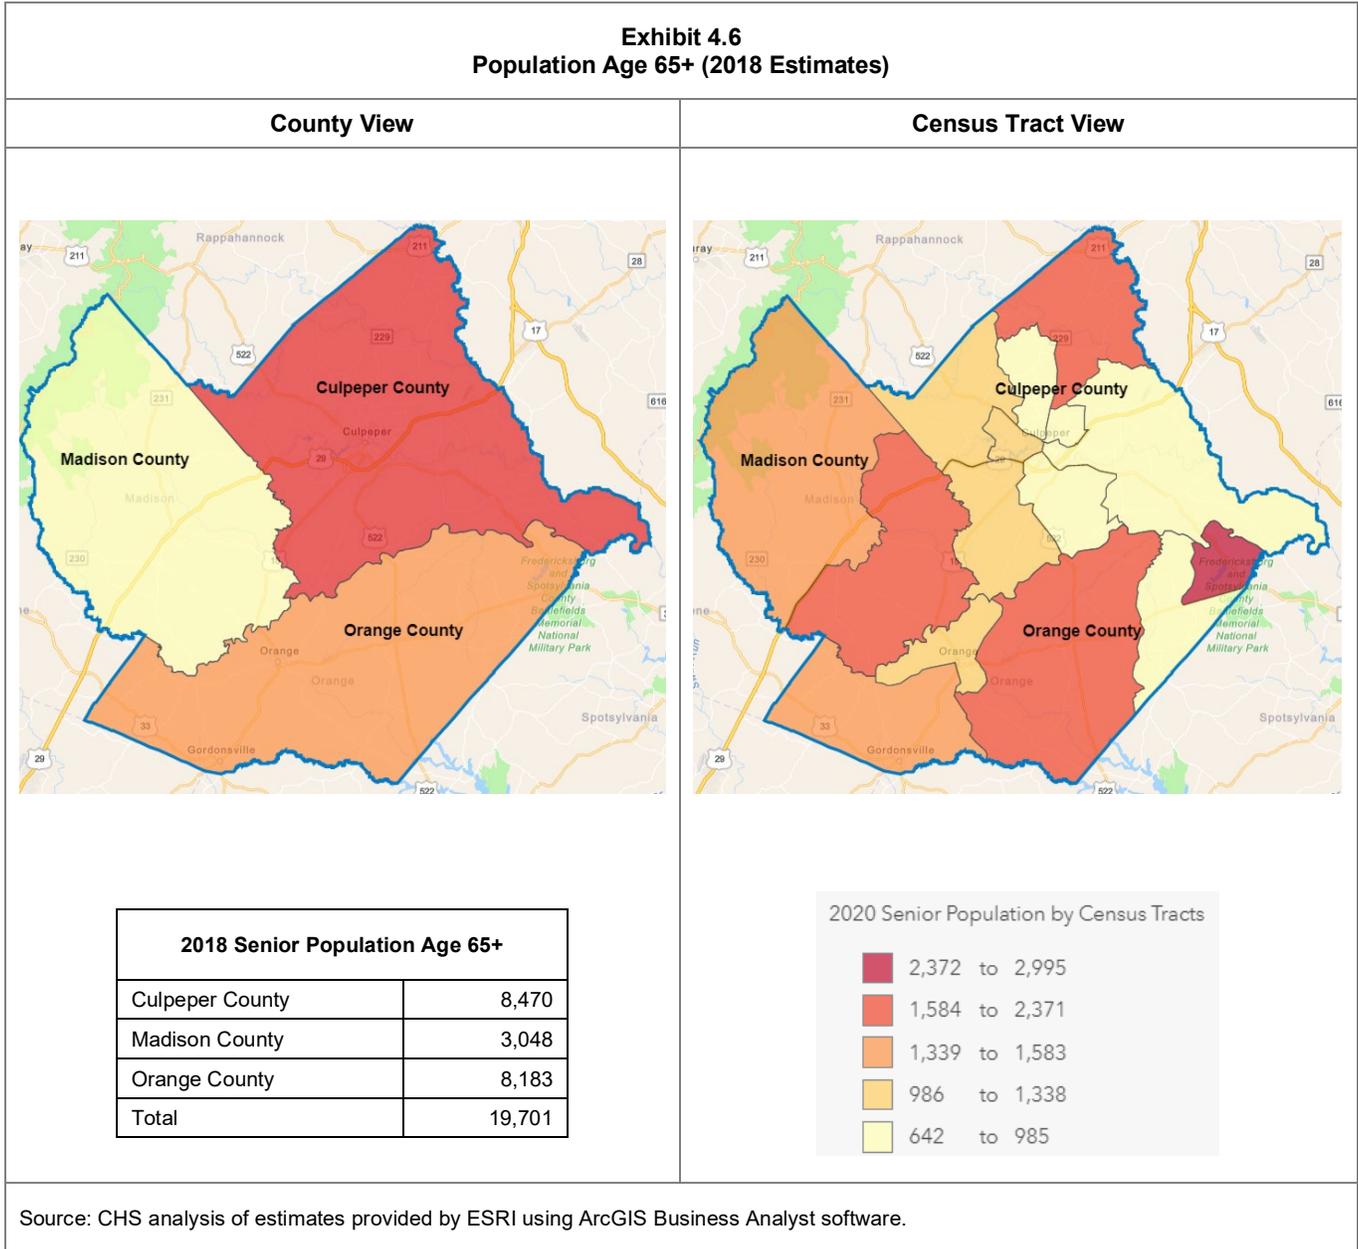

**Exhibit 4.4** shows the estimated number of minority residents as of 2020. In this analysis, minority residents include people of races other than White, plus people of Hispanic ethnicity. The county view shows a total of 27,727 minority residents in the study region as a whole, along with the county-level figures. The census tract view shows where minority residents reside within counties and across the region.

**Exhibit 4.5** shows the estimated number of households having one or more members with a disability as of 2018. The county view shows a total of 10,179 households meeting this definition, along with county-level figures. The census tract view shows where these households are located within counties and across the region.

**Exhibit 4.6** shows the estimated population age 65+ as of 2020. The county view shows there are an estimated 19,701 residents age 65+ in the study region as a whole, along with county-level figures. The census tract view shows where the population age 65+ resides within counties and across the region.

G. Maternal and Infant Health	Data were obtained from the Virginia Department of Health (2018)
H. Cancer Incidence	Data were obtained from the Virginia Department of Health-Cancer Registry (2013-2017)
I. Communicable Disease Incidence	Data were obtained from the Virginia Department of Health (2018) <a href="https://www.vdh.virginia.gov/data/communicable-diseases/">https://www.vdh.virginia.gov/data/communicable-diseases/</a>
J. Injury and Violence-Deaths	Data were obtained from the Virginia Department of Health Data Portal (2016) and Virginia Department of Health NCHS Bridged-Race population estimates. <a href="https://www.vdh.virginia.gov/data/injury-violence/">https://www.vdh.virginia.gov/data/injury-violence/</a> <a href="https://apps.vdh.virginia.gov/HealthStats/stats.htm">https://apps.vdh.virginia.gov/HealthStats/stats.htm</a>
J. Injury and Violence- Hospitalization	Community Health Solutions analysis of hospital discharge data from the Virginia Health Information (VHI) 2018 datasets and demographic estimates from Virginia Department of Health (2018). Data include discharges for Virginia residents from Virginia hospitals reporting to Virginia Health Information, Inc.) The analysis includes records of discharges of Virginia residents from Virginia hospitals excluding state and federal facilities. Data reported are based on the patient's primary diagnosis.  Injury and Violence definitions were developed using coding methodology from the Healthcare Cost and Utilization Project (HCUP) Clinical Classifications Software Refined (CCSR) for International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM)-coded diagnoses <a href="https://www.hcup-us.ahrq.gov/toolssoftware/ccsr/DXCCSR-User-Guide.pdf">https://www.hcup-us.ahrq.gov/toolssoftware/ccsr/DXCCSR-User-Guide.pdf</a>  NOTE: Virginia Health Information (VHI) requires the following statement to be included in all reports utilizing its data: VHI has provided non-confidential patient level information used in this report which was compiled in accordance with Virginia law. VHI has no authority to independently verify this data. By accepting this report the requester agrees to assume all risks that may be associated with or arise from the use of inaccurately submitted data. VHI edits data received and is responsible for the accuracy of assembling this information, but does not represent that the subsequent use of this data was appropriate or endorse or support any conclusions or inferences that may be drawn from the use of this data.

<p>K. Potentially Avoidable Hospitalization</p>	<p>Community Health Solutions analysis of hospital discharge data from the Virginia Health Information (VHI) 2018 datasets and demographic estimates from Virginia Department of Health (2018). Data include discharges for Virginia residents from Virginia hospitals reporting to Virginia Health Information, Inc.) The analysis includes records of discharges of Virginia residents from Virginia hospitals excluding state and federal facilities. Data reported are based on the patient's primary diagnosis.</p> <p>Potentially Avoidable Hospitalizations-The PQI definitions are detailed in their specification of ICD-9 diagnosis codes and procedure codes. Not every hospital admission for congestive heart failure, bacterial pneumonia, etc. is included in the PQI definition; only those meeting the detailed specifications. Low birth weight is one of the PQI indicators, but for the purpose of this report, low birth weight is included in the Maternal and Infant Health Profile. Also, there are four diabetes related PQI indicators which have been combined into one for the report. For more information, visit the AHRQ website at <a href="http://www.qualityindicators.ahrq.gov/modules/pqi_overview.aspx">http://www.qualityindicators.ahrq.gov/modules/pqi_overview.aspx</a></p> <p>NOTE: Virginia Health Information (VHI) requires the following statement to be included in all reports utilizing its data: VHI has provided non-confidential patient level information used in this report which was compiled in accordance with Virginia law.
