**Please direct questions or comments to the Division of Surveillance and Investigation,
Enhanced Surveillance Team: syndromic@vdh.virginia.gov**

Background

The Virginia Department of Health (VDH) currently receives data on visits to 77^s acute care hospital emergency departments (EDs) and 13 free-standing EDs in Virginia for purposes of public health surveillance. The purpose of this report is to characterize ED visit trends for acute unintentional overdose by opioids and heroin among Virginia residents.

Chief complaints and discharge diagnoses of ED visits are analyzed by VDH to identify and monitor issues of public health concern across Virginia. The chief complaint is a free-text field that captures the patient’s primary reason for seeking medical care as interpreted by the ED registration staff. The discharge diagnosis is a coded field using standardized values defined by the International Classification of Diseases (ICD) 9th and 10th Revision code sets.

Methodology

ED visits identified as **unintentional overdose by opioid or unspecified substance** include those with medical and non-medical use of a prescription opioid or where the substance is not specified, given evidence that the majority of fatal overdoses are opioid-related.¹ Visits must meet the following inclusion and exclusion criteria:

- Inclusion terms from Chief Complaint or Discharge Diagnosis: *overdose, OD, sobredosis, opioid, opiate, opium, narcotic, Narcan, naloxone, E850.1, E850.2, 965.00, 965.02, 965.09, 977.9, T40.0X1, T40.0X4, T40.2X1, T40.2X4, T40.3X1, T40.3X4, T40.4X1, T40.4X4, T40.601, T40.604, T40.691, T40.694, T50.901, T50.904*
- Exclusions terms from Chief Complaint or Discharge Diagnosis: *heroin, herion, heron, 965.01, T40.1X, suicide, alcohol overdose alone, withdrawal, detoxification, rehab, addiction, dependency, mental health or psychological evaluation, allergies, constipation, chronic pain, refill requests, and any specified non-opioid drug or medication*

ED visits identified as **unintentional overdose by heroin** must meet the following inclusion and exclusion criteria:

- Inclusion terms from Chief Complaint or Discharge Diagnosis: *heroin, herion, 965.01, E850.0, T40.1X1A, T40.1X4A*
- Exclusions terms from Chief Complaint or Discharge Diagnosis: *suicide, withdrawal, detoxification, rehab, and addiction*

These criteria were revised in September 2016 and again in August 2017 to improve specificity in the identification of ED visits for unintentional drug overdose. Readers are strongly encouraged to review [syndromic surveillance data limitations](#) when interpreting this report.

A technical issue resulted in underreporting of ED visits published in the November 2017 monthly report; this issue is corrected as of the December 2017 monthly report.

ED visits for unintentional overdose by opioid or unspecified substance and heroin are presented by count or rate per 100,000 population. Rates are calculated using U.S. Census Bureau 2016 population estimates. To protect confidentiality and maintain accurate rate calculations, ED visit counts of 1 to 4 and rates with numerators of 1 to 4 are suppressed in this report. Counts of 0 are included.

The geographic location is assigned based on the patient’s residential zip code provided. A single zip code may span multiple city and county localities in Virginia. If a patient resides in such a zip code, the visit is assigned to the locality where the majority of the population resides. Virginia city and county populations combined to calculate a rate per 100,000 population because of zip codes spanning multiple localities can be found in [Appendix 1](#).

§ In June 2017, several data reporting changes occurred. Please consider the following changes when interpreting the contents of this report. A single healthcare system in the Eastern Health Planning Region became unable to report data starting June 2017; reducing the number of reporting EDs to 77 out of an expected 82 acute care hospital EDs and 13 free-standing EDs. Any observed decreases in the count or rate of overdoses in the Eastern Region may be artificially low because of this change. Additionally, one acute care hospital ED in the Northwest Health Planning Region improved its data quality supporting more accurate capture of overdose visits, thereby increasing the count and rate for the Northwest Region as of June 2017.

Highlights for February 2018

Statewide ED visits for overdose by opioid or unspecified substance among Virginia residents decreased by less than 1% from January 2018 (596 visits) to February 2018 (593 visits) with February having the lowest monthly count in the last 12 months ([Figure 1A](#)). The total Year-to-Date (January to February) count of ED visits is 18% lower in 2018 as compared to 2017, and 5% lower as compared to 2016 ([Figure 1B](#)).

- Among the 5 [VDH health planning regions](#), rates of visits for overdose by opioid or unspecified substance were highest in the Southwest (10.3 per 100,000) and Central (9.0 per 100,000) regions. The lowest rates were in the Northern (4.5 per 100,000) and Eastern (5.3 per 100,000) regions ([Figure 1C](#)). The Year-to-Date 2018 counts for all regions, except the Northwest region, are lower than their 2017 visit counts ([Figure 1D](#)).
- By sex, there has been no significant difference in the proportion of visits for overdose by opioid or unspecified substance between females and males in the past 12 months ([Figure 1E](#)).
- By age group, the number of visits for overdose by opioid or unspecified substance among 25-34 year olds decreased by 7%, but this age group still had the highest rate in January (11.5 per 100,000) ([Figure 1F](#)). The 45-54 year old age group saw a visit increase of 27% (7.7 per 100,000).

Statewide ED visits for overdose by heroin among Virginia residents increased by 19% from January 2018 (89 visits) to February 2018 (106 visits) ([Figure 2A](#)). The total Year-to-Date (January to February) count of ED visits is 27% lower in 2018 compared to 2017, and 33% higher as compared to 2016 ([Figure 2B](#)).

- Among the 5 [VDH health planning regions](#), rates of visits for overdose by heroin were highest in the Northwest (1.9 per 100,000), Eastern (1.6 per 100,000) and Central (1.6 per 100,000) regions. The Central and Southwest regions saw a visit increase of 77% and 30%, respectively, from January 2018 ([Figure 2C](#)). The Year-to-Date 2018 counts for all regions are lower than their 2017 visit counts ([Figure 2D](#)).
- By sex, males contributed significantly (p-value < 0.01) more visits for overdose by heroin as compared to females in the past 12 months ([Figure 2E](#)).
- By age group, the rate of visits for overdose by heroin was the highest in the 25-34 year old age group (3.8 per 100,000) in February 2018, and the rate for this age group has been higher than any other age groups for the past 12 months. The 45-54 and 15-24 year old age groups saw a visit increase of 71% (1 per 100,000) and 38% (1.6 per 100,000), respectively, from January 2018 ([Figure 2F](#)).

Appendix 1

Virginia Localities Combined for the Purposes of Rate Calculation per 100,000 Population

- Alleghany County and Covington City
- Albemarle County and Charlottesville City
- Augusta County, Staunton City, and Waynesboro City
- Chesterfield County and Colonial Heights City
- Frederick County and Winchester City
- Fairfax County, Fairfax City, and Falls Church City
- Grayson County and Galax City
- Greensville County and Emporia City
- Henry County and Martinsville City
- Montgomery County and Radford City
- Pittsylvania County and Danville City
- Prince George County, Hopewell City, and Petersburg City
- Prince William County, Manassas City, and Manassas Park City
- Roanoke County, Roanoke City, and Salem City
- Rockingham County and Harrisonburg City
- Rockbridge County, Buena Vista City, and Lexington City
- Southampton County and Franklin City
- Washington County and Bristol City
- Wise County and Norton City
