Enhanced Surveillance Team: syndromic@vdh.virginia.gov**

Background

The Virginia Department of Health (VDH) currently receives data on visits to 79[¶] acute care hospital emergency departments (EDs) and 17[¶] free-standing EDs in Virginia for purposes of public health surveillance. The purpose of this report is to characterize ED visit trends for acute unintentional overdose by opioids and heroin among Virginia residents.

Chief complaints and discharge diagnoses of ED visits are analyzed by VDH to identify and monitor issues of public health concern across Virginia. The chief complaint is a free-text field that captures the patient’s primary reason for seeking medical care as interpreted by the ED registration staff. The discharge diagnosis is a coded field using standardized values defined by the International Classification of Diseases (ICD) 9th and 10th Revision code sets.

Methodology

ED visits identified as **unintentional overdose by opioid or unspecified substance** include those with medical and non-medical use of a prescription opioid or where the substance is not specified, given evidence that the majority of fatal overdoses are opioid-related.¹ Visits must meet the following inclusion and exclusion criteria:

- Inclusion terms from Chief Complaint or Discharge Diagnosis: *overdose, OD, sobredosis, opioid, opiate, opium, narcotic, Narcan, naloxone, E850.1, E850.2, 965.00, 965.02, 965.09, 977.9, T40.0X1, T40.0X4, T40.2X1, T40.2X4, T40.3X1, T40.3X4, T40.4X1, T40.4X4, T40.601, T40.604, T40.691, T40.694, T50.901, T50.904*
- Exclusions terms from Chief Complaint or Discharge Diagnosis: *heroin, herion, heron, 965.01, T40.1X, suicide, alcohol overdose alone, withdrawal, detoxification, rehab, addiction, dependency, mental health or psychological evaluation, allergies, constipation, chronic pain, refill requests, and any specified non-opioid drug or medication*

ED visits identified as **unintentional overdose by heroin** must meet the following inclusion and exclusion criteria:

- Inclusion terms from Chief Complaint or Discharge Diagnosis: *heroin, herion, 965.01, E850.0, T40.1X1A, T40.1X4A*
- Exclusions terms from Chief Complaint or Discharge Diagnosis: *suicide, withdrawal, detoxification, rehab, addiction*

These criteria were revised in September 2016 and again in August 2017 to improve specificity in the identification of ED visits for unintentional drug overdose. Readers are strongly encouraged to review [syndromic surveillance data limitations](#) when interpreting this report.

A technical issue resulted in underreporting of ED visits published in the November 2017 monthly report; this issue is corrected as of the December 2017 monthly report.

ED visits for unintentional overdose by opioid or unspecified substance and heroin are presented by count or rate per 100,000 population. Rates are calculated using U.S. Census Bureau 2016 population estimates. To protect confidentiality and maintain accurate rate calculations, ED visit counts of 1 to 4 and rates with numerators of 1 to 4 are suppressed in this report. Counts of 0 are included.

The geographic location is assigned based on the patient’s residential zip code provided. A single zip code may span multiple city and county localities in Virginia. If a patient resides in such a zip code, the visit is assigned to the locality where the majority of the population resides. Virginia city and county populations combined to calculate a rate per 100,000 population because of zip codes spanning multiple localities can be found in [Appendix 1](#).

[¶] Refer to [Appendix 2](#) for a summary of data reporting changes that should be considered when interpreting this report.

Highlights for April 2018

Statewide ED visits for overdose by opioid or unspecified substance among Virginia residents decreased by 2% from March 2018 (735 visits) to April 2018 (721 visits) ([Figure 1A](#)). The total Year-to-Date (January to April) count of ED visits is 12% lower in 2018 as compared to 2017, and 5% lower as compared to 2016 ([Figure 1B](#)).

- Among the five [VDH Health Planning Regions](#), rates of visits for overdose by opioid or unspecified substance were highest in the Central and Southwest (both 13.3 per 100,000) regions. The lowest rates were in the Eastern (5.4 per 100,000) and Northern (5.7 per 100,000) regions ([Figure 1C](#)). The Year-to-Date 2018 counts for the Northwest and Southwest regions are higher than their 2017 visit counts ([Figure 1D](#)).
- By sex, there was no significant difference in the proportion of visits for overdose by opioid or unspecified substance between females and males in April 2018 ([Figure 1E](#)).
- By age group, the number of visits for overdose by opioid or unspecified substance among 25-34 year olds decreased by 7%, but remained the age group with the highest rate (14.2 per 100,000) in April ([Figure 1F](#)). The 45-54 and 65+ year old age groups saw a visit increase of 27% (9.3 per 100,000) and 11% (5.5 per 100,000), respectively, from March 2018.

Statewide ED visits for overdose by heroin among Virginia residents increased by 17% from March 2018 (107 visits) to April 2018 (125 visits) ([Figure 2A](#)). The total Year-to-Date (January to April) count of ED visits is 21% lower in 2018 compared to 2017, and 6% lower as compared to 2016 ([Figure 2B](#)).

- Among the five [VDH Health Planning Regions](#), rates of visits for overdose by heroin were highest in the Eastern (2.4 per 100,000) and Central (2.2 per 100,000) regions ([Figure 2C](#)). The Year-to-Date 2018 counts for all regions, except Central region, are lower than their 2017 visit counts ([Figure 2D](#)).
- By sex, there was no significant difference in the proportion of visits for overdose by heroin between females and males in April 2018 ([Figure 2E](#)). This is a change from the prior 18 months where a significant difference between males and females was observed.
- By age group, the rate of visits for overdose by heroin was the highest in the 25-34 year old age group (4.8 per 100,000) in April 2018, and the rate for this age group has been higher than any other age groups since January 2015 when reporting by VDH began. The 45-54 and 35-44 year old age groups saw a visit increase of 142% (1.5 per 100,000) and 50% (1.9 per 100,000), respectively, from March 2018 ([Figure 2F](#)).

- Montgomery County and Radford City
- Pittsylvania County and Danville City
- Prince George County, Hopewell City, and Petersburg City
- Prince William County, Manassas City, and Manassas Park City
- Roanoke County, Roanoke City, and Salem City
- Rockingham County and Harrisonburg City
- Rockbridge County, Buena Vista City, and Lexington City
- Southampton County and Franklin City
- Washington County and Bristol City
- Wise County and Norton City

Appendix 2

Summary of Data Reporting Changes by Emergency Departments in Virginia

The volume and quality of data reported by emergency departments to the Virginia Department of Health for syndromic surveillance affect the volume and quality of data in this report. In general, volume and quality have improved over time as additional EDs report to the Virginia Department of Health. This general increase in data volume should be taken into consideration when interpreting trends in visit counts and rates over time. Occasionally, EDs stop reporting data, which can lead to a decrease in data volume and a lowering of trends. Other factors that can affect the data are changes in the quality reported by EDs, which can improve or reduce the accuracy of the data.

Please consider the following data reporting changes when interpreting the contents of *Emergency Department Visits for Overdose by Opioid, Unspecified Substance and Heroin among Virginia Residents* reports.

Month	Health Region	Description
June 2017	Eastern	A single healthcare system representing five acute care hospital EDs became unable to report data, reducing the quantity and representativeness of the data from this region.
June 2017	Northwest	One acute care hospital ED improved its data quality, supporting more accurate capture of overdose visit data.
February 2018	Central	One additional acute care hospital ED began reporting data to VDH, increasing the quantity and representativeness of data from this region.
March 2018	Central	Four additional free-standing EDs began reporting data to VDH, increasing the quantity and representativeness of data from this region.
April 2018	Southwest	Two additional acute care hospital EDs began reporting data to VDH, increasing the quantity and representativeness of data from this region.
April 2018	Northern	One acute care hospital ED became unable to report data, reducing the quantity and representativeness of the data from this region.
