Background

The Virginia Department of Health (VDH) currently receives data on visits to 67[¶] acute care hospital emergency departments (EDs) and 13[¶] free-standing EDs in Virginia for purposes of public health surveillance. The purpose of this report is to characterize ED visit trends for unintentional overdose by opioids and heroin among Virginia residents.

Chief complaints and discharge diagnoses of ED visits are analyzed by VDH to identify and monitor issues of public health concern across Virginia. The chief complaint is a free-text field that captures the patient's primary reason for seeking medical care as interpreted by the ED registration staff. The discharge diagnosis is a coded field using standardized values defined by the International Classification of Diseases (ICD) 9th and 10th Revision or SNOMED Clinical Terms (CT) code sets.

Methodology

VDH categorizes ED visits into one of two mutually exclusive case definitions: 1) **unintentional overdose by opioid or unspecified substance** or 2) **unintentional overdose by heroin**. VDH revises these case definitions based on guidance from the Centers for Disease Control and Prevention (CDC) as well as findings from ongoing data quality evaluations. The current case definitions are located in [Appendix 1](#). Information on the case definition revisions, including historic definitions, can be found on the VDH website - <http://www.vdh.virginia.gov/surveillance-and-investigation/syndromic-surveillance/drug-overdose-case-definition/>.

ED visits for unintentional overdose by opioid or unspecified substance and heroin are presented by count or rate per 100,000 population. Rates are calculated using U.S. Census Bureau 2017 population estimates. To protect confidentiality and maintain accurate rate calculations, ED visit counts of 1 to 4 and rates with numerators of 1 to 4 are suppressed in this report. Counts of 0 are included.

The geographic location is assigned based on the patient's residential zip code provided. A single zip code may span multiple city and county localities in Virginia. If a patient resides in such a zip code, the visit is assigned to the locality where the majority of the population resides. Virginia city and county populations combined to calculate a rate per 100,000 population because of zip codes spanning multiple localities can be found in [Appendix 2](#).

**Please direct questions or comments to the Division of Surveillance and Investigation,
Enhanced Surveillance Team: syndromic@vdh.virginia.gov**

[¶] Refer to [Appendix 3](#) for a summary of data reporting changes that should be considered when interpreting this report.

Highlights for November 2018

Note: A single healthcare system, representing 18% of all ED visits reported to VDH for opioid and heroin overdose, became unable to report beginning November 2018. The healthcare system was **removed from all statistics in this report** in order to display accurate and comparable historical trends. Please use caution when comparing the November 2018 statistics to previously published reports.

Statewide ED visits for overdose by opioid or unspecified substance among Virginia residents decreased by 16% from October 2018 (548 visits) to November 2018 (459 visits) ([Figure 1A](#)). The total Year-to-Date (January to November) count of ED visits is 14% lower in 2018 as compared to 2017 and 15% lower as compared to 2016. ([Figure 1B](#)).

- Among the five [VDH Health Planning Regions](#), the rate of visits for overdose by opioid or unspecified substance decreased in three regions: Southwest (32%), Northwest (28%), and Central (18%). Eastern region increased (16%) while Northern region had no change ([Figure 1C](#)). The Year-to-Date 2018 counts for all health regions, except Southwest region, are lower than 2017. The Year-to-Date counts for Eastern and Northern regions have decreased annually since 2016 ([Figure 1D](#)).
- By sex, there was no significant difference in the proportion of visits for overdose by opioid or unspecified substance between females and males in November 2018. ([Figure 1E](#)).
- By age group, the number of visits for overdose by opioid or unspecified substance among 25-34 year olds decreased by 10% but remained the age group with the highest rate (9.2 per 100,000) in November 2018 ([Figure 1F](#)). Six of the seven age groups experienced a decrease in November 2018.

Statewide ED visits for overdose by heroin among Virginia residents increased by 13% from October 2018 (78 visits) to November 2018 (88 visits) ([Figure 2A](#)). The total Year-to-Date (January to November) count of ED visits is 19% lower in 2018 compared to 2017, and 5% lower as compared to 2016 ([Figure 2B](#)).

- Among the five [VDH Health Planning Regions](#), the rate of visits for overdose by heroin increased in Eastern (55%), Northern (29%), and Northwest (23%) regions, while decreases occurred in the Central (31%) and Southwest (13%) regions ([Figure 2C](#)). The Year-to-Date 2018 counts for all health regions, except Central region, are lower than their 2017 visit count ([Figure 2D](#)).
- By sex, males contributed a statistically higher proportion of visits for overdose by heroin compared to females in November 2018 ([Figure 2E](#)).
- By age group, the rate of visits for overdose by heroin among 25-34 year olds decreased by 11% but remained the age group with highest rate (2.7 per 100,000) in November 2018 ([Figure 2F](#)). The 15-24 and 45-54 year old age groups saw a visit increase of 114% (8 additional visits, rate 1.3 per 100,000) and 113% (9 additional visits, rate 1.5 per 100,000), respectively.

Appendix 1

Case Definitions

Unintentional overdose by opioid or unspecified substance includes medical and non-medical use of a prescription opioid or where the substance is not specified.

- **Inclusion** criteria for Chief Complaint or Discharge Diagnosis:
 - Terms: *overdose, opioid, opiate, opium, morphine, hydrocodone, oxycodone, hydromorphone, oxymorphone, codeine, buprenorphine fentanyl, methadone, naloxone, tramadol, suboxone, or medication and drug brand names (Dilaudid, Narcan, OxyContin, Percocet, Vicodin, etc.)*
 - ICD-9 codes: 965.00, 965.02, 965.09, E850.1, E850.2
 - ICD-10 codes: T40.0X1, T40.0X4, T40.2X1, T40.2X4, T40.3X1, T40.3X4, T40.4X1, T40.4X4, T40.601, T40.604, T40.691, T40.694, F11.10, F11.120, F11.121, F11.122, F11.129, F11.20, F11.220, F11.221, F11.222, F11.229, F11.90, F11.920, F11.921, F11.922, F11.929
 - SNOMED CT codes: 295165009, 242253008, 297199006, 295213004.
- **Exclusion** criteria for Chief Complaint or Discharge Diagnosis:
 - Terms: *withdrawal, detoxification, suicide, intentional, self-harm, or any specified non-opioid medication or drug, heroin, dope, speed ball*
 - ICD-9 codes: E95-97, V62.84, 965.01
 - ICD-10 codes: R45.851, T40.1X1A, T40.1X4A
 - SNOMED CT code: 295174006.

Unintentional overdose by heroin

- **Inclusion** criteria for Chief Complaint or Discharge Diagnosis:
 - Terms: *heroin, speedball, dope*
 - ICD-9 codes: 965.01, E850.0
 - ICD-10 codes: T40.1X1A, T40.1X4A
 - SNOMED CT codes: 295174006, 295175007, 295176008
- **Exclusion** criteria from Chief Complaint or Discharge Diagnosis:
 - Terms: *withdrawal, detoxification, suicide, intentional, self-harm*
 - ICD-9 codes: E95-97, V62.84
 - ICD-10 codes: R45.851

- Henry County and Martinsville City
- Montgomery County and Radford City
- Pittsylvania County and Danville City
- Prince George County, Hopewell City, and Petersburg City
- Prince William County, Manassas City, and Manassas Park City
- Roanoke County, Roanoke City, and Salem City
- Rockingham County and Harrisonburg City
- Rockbridge County, Buena Vista City, and Lexington City
- Southampton County and Franklin City
- Washington County and Bristol City
- Wise County and Norton City

Appendix 3

Summary of Data Reporting Changes by Emergency Departments in Virginia

The volume and quality of data reported by emergency departments to the Virginia Department of Health for syndromic surveillance affect the volume and quality of data in this report. In general, volume and quality have improved over time as additional EDs report to the Virginia Department of Health. This general increase in data volume should be taken into consideration when interpreting trends in visit counts and rates over time. Occasionally, EDs stop reporting data, which can lead to a decrease in data volume and a lowering of trends. Other factors that can affect the data are changes in the quality reported by EDs, which can improve or reduce the accuracy of the data.

Please consider the following data reporting changes when interpreting the contents of *Emergency Department Visits for Overdose by Opioid, Unspecified Substance and Heroin among Virginia Residents* reports.

Month	Health Region	Description
June 2017	Eastern	A single healthcare system representing five acute care hospital EDs became unable to report data, reducing the quantity and representativeness of the data from this region.
June 2017	Northwest	One acute care hospital ED improved its data quality, supporting more accurate capture of overdose visit data.
February 2018	Central	One additional acute care hospital ED began reporting data to VDH, increasing the quantity and representativeness of data from this region.
March 2018	Central	Four additional free-standing EDs began reporting data to VDH, increasing the quantity and representativeness of data from this region.
April 2018	Southwest	Two additional acute care hospital EDs began reporting data to VDH, increasing the quantity and representativeness of data from this region.
April 2018	Northern	One acute care hospital ED became unable to report data, reducing the quantity and representativeness of the data from this region. Update: This hospital ED began reporting data again to VDH as of the June 2018 report.
June 2018	Northwest	Two acute care hospital EDs and one free-standing ED became unable to report data, reducing the quantity and representativeness of the data from this region. Update: These hospital EDs began reporting data again to VDH as of the August 2018 report.
Sept 2018	Central, Northern, Northwest Southwest	A single healthcare system representing 13 acute care hospital EDs and 4 free-standing EDs became unable to fully report Discharge Diagnosis data among all its facilities. UPDATE: In Oct 2018, affected facilities in this healthcare system began reporting again but at a reduced volume.
Nov 2018	Central,	A single healthcare system representing 13 acute care hospital EDs and 4 free-standing EDs became unable to report data, reducing the

	Northern, Northwest Southwest	quantity and representativeness of data in these regions. Central and Southwest regions are most notably impacted.
