# I. Introduction

## A. About this Report

The Annual Compliance Report provides a comprehensive review of public drinking water violations in Virginia each calendar year, in accordance with section 1414(c)(3)(A)(i) of the amended Safe Drinking Water Act (SDWA). The Virginia Department of Health (VDH), Office of Drinking Water (ODW) is the primacy agency responsible for administering the federal SDWA and National Primary Drinking Water Regulations (NPDWR) in Virginia. This report fulfills the requirement to submit an annual report to the United States Environmental Protection Agency (EPA) that summarizes the incidents constituting a violation in Virginia for 2025.

In this report, ODW presents information about public water systems (also known as "waterworks" in Virginia). The report presents information about the inventory of waterworks and the number of incidents constituting a violation of the NPDWR. For the purpose of this report, violations of the NPDWR include the following:

- Maximum contaminant level (MCL) violations;
- Maximum residual disinfectant level (MRDL) violations;
- Treatment technique (TT) requirement violations;
- Significant monitoring and reporting (M/R) violations;
- Significant monitoring (M) violations;
- Significant reporting (R) violations;
- Variances and exemption violations;
- Recordkeeping violations;
- Significant public notice requirement violations; and
- Significant consumer confidence report (CCR) notification requirement violations.

The data presented in this report is generated from the federal Safe Drinking Water Information System (SDWIS/Fed) database. Each quarter, ODW reports data from the SDWIS/State database to EPA for transfer to the SDWIS/Fed database, which includes inventory data, site visits, violations, and enforcement actions. EPA uses this data to compile the Enforcement Targeting Tool (ETT) list and to supply states with the data to compile the Annual Compliance Report.

## B. Statutory Authority

Pursuant to the SDWA, EPA promulgated the NPDWR to carry out the mandates set forth in the SDWA. The 1986 amendments to the SDWA directed EPA to amend the NPDWR to provide drinking water standards and treatment techniques that protect public health by limiting contaminants in drinking water. EPA set national limits on contaminant levels in drinking water, called maximum contaminant levels (MCLs). For some regulations, EPA established treatment techniques in lieu of an MCL to control contaminant levels that cannot be measured reliably.

The NPDWR also require waterworks to monitor drinking water for contamination, report monitoring results to the state, and notify the public when the waterworks violates the NPDWR. The 1996 amendments to the SDWA require that public notice clearly explain the nature of the violation, potential adverse health effects, corrective actions to address the violation, and alternative water supplies for ongoing violations. Generally, the larger the service population, the greater the monitoring and reporting requirements.

In addition to setting drinking water standards and treatment techniques, the SDWA also allows EPA to award states with primary enforcement responsibility (i.e., "primacy"). To be awarded primacy, a state must promulgate regulations no less stringent than the federal requirements. In Virginia, the Public Water Supplies Law (PWSL) provides the State Health Commissioner (Commissioner), acting on behalf of the State Board of Health (Board), with authority to promulgate the Waterworks Regulations (Regulations) consistent with federal requirements. As such, VDH and ODW, in conjunction with the Board, developed drinking water regulations that are no less stringent than the federal requirements.

To maintain primacy, the SDWA requires states to develop mechanisms for enforcing state and federal drinking water requirements.[1] The PWSL and Regulations provide VDH with authority to compel compliance through enforcement. EPA has provided guidance on the enforcement process through its Enforcement Response Policy (ERP), which ODW has incorporated into its guidance documents.

## C. Virginia's Drinking Water Program

ODW's mission is to protect public health by helping to ensure that all waterworks in Virginia provide a safe and adequate supply of drinking water to the public. ODW accomplishes this mission by advocating for safe drinking water; monitoring drinking water quality; providing technical assistance, training, and financing to waterworks owners and operators; and enforcing drinking water standards. ODW strives for full compliance with drinking water regulations, using compliance assistance as the first step towards resolving potential issues. ODW uses informal enforcement activities to achieve compliance and elevates matters to formal enforcement as needed to resolve noncompliance and protect public health. Informal and formal enforcement activities are discussed further below.

In cases where insufficient technical, managerial, or financial resources present a barrier to compliance, ODW may provide resources to waterworks in accordance with the EPA-approved Capacity Development Strategy. If ODW is unable to achieve compliance through technical or compliance assistance due to the timeline for corrective action, status of the waterworks on the ETT, or the owner or operator's lack of resources or unwillingness to cooperate, ODW may proceed with enforcement. ODW encourages a waterworks owner to return to compliance at any time during the enforcement process; however, progressive measures may be necessary to carry out ODW's mission to protect public health.

The law provides ODW with enforcement tools that enable it to compel compliance and protect public health. Formal enforcement tools include consent orders, which may include a civil penalty and corrective action plan for returning the waterworks to compliance; administrative proceedings that can ultimately result in the Commissioner issuing a special order that may include civil penalties, required corrective actions, and permit revocation; and civil and criminal court actions. ODW may escalate its enforcement response based on increased risk of harm to public health until compliance is achieved. Additionally, in striving for full compliance, ODW may pursue more than one of these enforcement methods with respect to any particular waterworks.

ODW consists of a central office in Richmond and six field offices in Abingdon, Culpeper, Danville, Lexington, Norfolk, and Richmond, Virginia. Engineering, surveillance, and technical or compliance assistance take place in the field offices, while the division directors are based in the central office. ODW divisions include Financial and Construction Assistance Programs (FCAP); Training, Capacity Development, and Outreach (TCDO); Technical Services (DTS); Compliance, Enforcement, and Policy

[1] See 42 U.S.C. § 300g-2(a)(2) and 40 CFR § 142.10(b).

(CEP); and Data Management, Permitting, and Sample Verification[2]. Each division has a division director and multiple staff. CEP consists of the director, an enforcement coordinator, a policy and program coordinator, and a policy analyst[3]. The director and the enforcement coordinator are the CEP staff chiefly involved with the day-to-day activities of ODW's compliance and enforcement program. The policy and program coordinator has limited involvement in compliance and enforcement matters. The policy analyst assists with developing policies and providing support for the development of standards for operation, including related to compliance and enforcement.

CEP supports ODW's mission "to protect public health and help ensure that all waterworks provide a safe and adequate supply of drinking water" by ensuring waterworks in Virginia comply with the PWSL and Regulations when technical assistance and other means are not effective to return the waterworks to compliance. To carry out its mission, CEP has established the following goals:

- To assist the regulated community in achieving and maintaining compliance with the PWSL and Regulations, and to promote protection of public health;
- To return noncompliant waterworks to compliance and to stop continuing or repeated violations;
- To take enforcement actions that are timely and appropriate, consistent and certain, and reasonable, fair, and effective;
- To recover civil penalties where appropriate, including amounts sufficient to remove the economic benefit of noncompliance;
- To deter future violations;
- To conduct enforcement actions courteously and professionally; and
- To earn public confidence in the enforcement program.

With CEP's support, field office staff play key roles in implementing the enforcement program consistent with its mission and goals. Field office staff interact directly with the waterworks owners and operators and the public daily, while CEP coordinates statewide implementation of the enforcement program to ensure consistency, fairness, and effective execution of compliance and enforcement strategies. Open communication and mutual support are essential for ensuring a successful, decentralized, and consistent approach to enforcement.

Typically, the district engineer, inspector, or compliance specialist in an ODW field office first identifies noncompliance during a sanitary survey or through a complaint, laboratory data, or other compliance monitoring and reporting. Once field office staff identify a potential violation, the field office staff will draft the notice of alleged violation (NOAV), monitor corrective actions, and work to return the waterworks to compliance. Field office staff consult other divisions, such as FCAP and TCDO, to provide compliance assistance and additional technical, managerial, or financial resources, as needed.

The CEP division director and enforcement coordinator monitor the seriousness of violations and consult with field office staff about possible referral for formal enforcement when the waterworks owner cannot resolve the alleged violations within a reasonable time period. This report describes violations of the drinking water standards and the associated enforcement actions taken when a waterworks does not return to compliance in an appropriate and timely manner.

[2] This is a new ODW division that was created in 2026.

[3] The policy analyst is a new position that was created in 2026.

# II. Glossary

Terms used in this report are listed below in topical order as follows: information about public water systems in Virginia, sources of drinking water contamination, drinking water standards, compliance monitoring, and enforcement tools for achieving compliance.

## A. Public Water System or Waterworks

Public water systems (PWS) are known as "waterworks" in Virginia. A waterworks is any system that provides piped water for human consumption to at least 15 service connections or 25 or more individuals for at least 60 days each year. Human consumption means drinking, food preparation, dishwashing, bathing, showering, hand washing, teeth brushing, and maintaining oral hygiene.

The three types of waterworks are community, non-transient non-community, and transient non-community. How a waterworks is classified depends on the population it serves.

### ❖ Community Waterworks (CWS)

Community waterworks serve at least 15 service connections used by year-round residents, or regularly serve 25 or more year-round residents, and may include municipal systems, authorities, mobile home parks, or residential developments. Community waterworks present a greater risk of harm to public health from increased exposure, so the Regulations are more protective for community waterworks than for waterworks serving non-community populations.

### ❖ Non-transient Non-community Waterworks (NTNC)

Non-transient non-community waterworks generally serve facilities such as schools, factories, and other businesses. NTNCs are not community waterworks and regularly serve drinking water to at least 25 of the same persons for over six months out of the year.

### ❖ Transient Non-community Waterworks (TNC)

Transient non-community waterworks are the most common type of water system and include facilities that serve different people each day, such as restaurants, campgrounds, and rest stops. TNCs serve at least 25 people a day for at least 60 days out of the year, while not meeting the definition of a CWS or NTNC.

## B. Sources of Drinking Water Contamination

Contaminants may enter drinking water before, during, or after treatment. Most waterworks treat their water as necessary to ensure that the drinking water is safe to consume. Examples of contaminant sources are as follows:

**Before Treatment**

- Bacteria, viruses, and protozoa from human or animal sources.
- Turbidity in water caused by suspended matter, such as clay, silt, and microscopic organisms.
- Inadequately treated wastewater, sanitary sewer overflows, leaking sewer lines, and

malfunctioning septic systems.
- Defective storage tanks.
- Pesticides, fertilizers, and agricultural runoff.
- Run off from oil-slicked or salt-treated highways.
- Underground storage tanks.
- Naturally occurring metals, such as arsenic or cadmium.
- Decay products of naturally occurring radionuclides such as radon, radium, and uranium.
- Industrial chemicals, such as solvents.

**During Treatment**

- Treatment malfunction or chemical overfeed.
- By-products of disinfectants, such as trihalomethanes and haloacetic acids.

**After Treatment**

- Lead, copper, asbestos, and other materials from corroding pipes.
- Microbes and sediment entering through leaking pipes, joints, valves, or water main breaks.
- Improper connections with other systems or cross-connections with non-potable water that allow contaminants to enter drinking water pipes.
- Permeation of contaminants through certain pipe materials.
- Microbes and other contaminants can enter or accumulate due to inadequately operated or poorly maintained storage tanks.
- Disinfection byproducts, depleted disinfectant residuals, microbial re-growth, biofilm growth, or nitrification from inadequate operation or maintenance of distribution systems.

## C. Drinking Water Standards

EPA set legal limits on over 90 contaminants in drinking water. The legal limit for a contaminant reflects the level that protects human health and can be achieved using the best available technology.

### ❖ Maximum Contaminant Levels (MCL)

EPA sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption. The MCL is the highest concentration of a contaminant that EPA allows in drinking water. The Regulations include all of EPA's MCLs.

### ❖ Maximum Residual Disinfectant Levels (MRDL)

EPA sets national limits on residual disinfectant levels in drinking water to reduce the risk of exposure to disinfectant byproducts that form when chemical disinfectants are added to drinking water to prevent bacteriological contamination. Chemical disinfectants may react with organic matter in the distribution system to form carcinogenic byproducts that present harm to human health with chronic exposure. The MRDL level is the highest level of a disinfection byproduct that EPA allows in drinking water. The Regulations include all of EPA's MRDLs.

### ❖ Treatment Techniques (TT)

EPA may establish treatment techniques in lieu of MCLs for contaminants that cannot be measured

reliably. Absent the ability to measure a contaminant level, EPA requires that waterworks follow treatment techniques to ensure certain contaminants are adequately controlled. Viruses and turbidity are examples of contaminants that are controlled by treatment techniques rather than MCLs.

### ❖ Monitoring and Reporting

Monitoring and reporting requirements are specific to each waterworks. At a minimum, all waterworks are required to monitor routinely for total coliform bacteria, nitrate and nitrite, and, if using a surface water source, conduct monitoring for other microbiological contaminants. Community and non-transient non-community waterworks also monitor other chemicals and radiological contaminants. ODW may require additional monitoring for noncompliance.

Monitoring and reporting violations occur when a waterworks owner fails to monitor and report sample results indicating drinking water quality or reports the sample results incorrectly. Monitoring and reporting requirements are critical to verifying that the waterworks provides drinking water that meets the standards in the NPDWR and Regulations.

### ❖ Monitoring and Reporting Violations

For this report, monitoring and reporting violations, with rare exceptions, occur when the waterworks does not collect samples or does not report results to ODW during the compliance period for a particular contaminant.

### ❖ Consumer Notification

Consumer notification violations result when community waterworks owners fail to deliver a Consumer Confidence Report (CCR) to its customers educating them on their drinking water quality. The CCR is an annual report that includes educational material, source water information, the levels of any detected contaminants, and the status of compliance with drinking water regulations.

### ❖ Consumer Notification Violations

For this report, a consumer notification violation occurs if the owner of a community waterworks completely fails to provide its consumers the required annual drinking water quality report.

### ❖ Public Notice

The Public Notification Rule, as it has been incorporated in the Regulations, requires waterworks owners to notify their consumers any time the waterworks violates a drinking water regulation (for example, exceeding an MCL or MRDL, violation of a treatment technique requirement, or occurrence of a waterborne disease outbreak) or has a situation posing a risk to public health. Notices must be in a form and manner reasonably calculated to reach all consumers, not just billing customers or persons named on an account. Public notices must include a description of the violation, actions that the customers should take, and a schedule for returning to compliance.

### ❖ Public Notification Violations

For this report, a public notification violation occurs when a waterworks completely fails to notify

its consumers that it violated a drinking water regulation or had a situation posing a risk to public health.

### ❖ Variances and Exemptions

In limited circumstances, the Commissioner may grant variances or exemptions that relieve a waterworks from complying with a specific regulatory requirement. Variances may be appropriate when the characteristics of the raw water source prevent it from meeting an MCL and treatment or alternative water sources are not feasible. Exemptions allow certain waterworks additional time to comply with a new regulation as long as the waterworks continues to protect public health. VDH did not issue any exemptions or variances to the National Primary Drinking Water Regulations in 2025.

## D. Compliance Monitoring

ODW uses the following tools to monitor and track compliance with the drinking water requirements. The Enforcement Targeting Tool (ETT) helps EPA and ODW to identify and prioritize waterworks with health-based violations. Formal enforcement action may be required within six months of a waterworks' status on the ETT as a serious violator.

### ❖ Enforcement Targeting Tool (ETT)

The ETT implements EPA's ERP by assigning each violation a number of points based on the assigned threat to public health, which are then added together to provide a total score for each waterworks. The ETT helps identify waterworks with the most noncompliance across all rules within a five-year period. *EPA Drinking Water Enforcement Response Policy.*

- Potential Serious Violator

The status of a waterworks with an ETT score of 5 to 10 points.

- Serious Violator

The status of a waterworks with an ETT score greater than 10 points. The ERP requires formal enforcement action within six months of a waterworks being listed on the ETT as a serious violator.

### ❖ Enforcement Targeting Tool Assistant (ETTA)

A tool that analyzes SDWIS/State database data and calculates a real time assessment of waterworks that are out of compliance, comparing this data side-by-side with the latest state data reported to the SDWIS/Fed database.

### ❖ State Violation Scoring System (SVSS)

A report generated from the SDWIS/State database that provides a real-time assessment of a waterworks' state regulatory violations.

❖ Health-Based Violation (HBV)

Violations of the MCLs or MRDLs allowed in drinking water; or of treatment technique rules, which specify required processes intended to reduce the amounts of contaminants in drinking water. MCLs, MRDLs, and treatment techniques are all health-based drinking water standards.

❖ Returned to Compliance (RTC)

The waterworks has completed monitoring, reporting, modifications to treatment, or other activities necessary to return to compliance with the Regulations following a violation. Voluntary corrective action, compliance assistance, and informal or formal enforcement actions may be needed to return the waterworks to compliance.

## E. Enforcement Tools

For waterworks that fail to return to compliance through assistance, ODW may proceed with an enforcement action to compel compliance. Enforcement tools include informal enforcement actions, such as notices of alleged violation and warning letters, and formal enforcement actions, such as administrative orders with civil penalties and corrective action. ODW's enforcement policies are consistent with state and federal requirements and EPA's ERP.

❖ Informal Enforcement

Compliance and other activities leading up to formal enforcement, including an NOAV, letter of agreement, or warning letter, as well as activities to enforce requested actions outlined in an NOAV.

❖ Notice of Alleged Violation (NOAV)

A written statement from ODW to a waterworks owner notifying the owner that ODW has reason to believe that a violation has occurred or is occurring. An NOAV includes the facts that form the basis for alleging a violation has occurred or is occurring and a legal citation to the statutes or regulations allegedly violated. An NOAV often includes a request for specific corrective action. An NOAV is not a determination that a violation has occurred or is occurring, which means it is not a case decision. 12VAC5-590-110 of the Regulations.

❖ Formal Enforcement

An action that cites specific violations, requires corrective action to return to compliance, and includes an enforceable consequence if the schedule of compliance is not met, in accordance with EPA's ERP. Examples include administrative orders with and without consent (i.e., a consent order or special order) and civil or criminal court action. All three of these avenues for formal enforcement can result in an owner being assessed a monetary penalty.

- Consent Order

A voluntary agreement between the Commissioner, acting on behalf of the Board when it is not in session, and the waterworks owner to resolve violations of the PWSL and Regulations, setting forth corrective actions to be completed and a schedule for returning to compliance. In a small number of cases, a consent order may be issued without an expected end date. An example would be a consent order issued to address intractable high fluoride levels at a waterworks.

- Special Order

An administrative order issued by the Commissioner, on behalf of the Board, without a waterworks owner's consent after an informal fact-finding proceeding (IFFP), compelling the owner to bring the waterworks into compliance with the Regulations.

- Civil Penalties

Civil penalties may be imposed administratively or through civil court action. Civil penalties assessed through the administrative process can be included in a consent order or in a special order. Civil penalties issued via a consent order or special order are limited by the Code of Virginia to a maximum of $1,000 for each day of violation. A court may assess a penalty in a civil lawsuit of up to $5,000 for each day of violation of the PWSL, the Regulations, or an order issued pursuant thereto.

- Civil Action

In addition to imposing a monetary penalty, a civil court can provide injunctive relief by requiring a waterworks owner to take certain actions within a certain time frame to resolve regulatory violations.

- Criminal Action

Code of Virginia § 32.1-27 establishes that violating a regulation of the Board is a Class 1 misdemeanor. The penalty for a Class 1 misdemeanor in Virginia is confinement in jail for not more than 12 months and/or a fine of not more than $2,500.

❖ Enforcement Response Policy (ERP)

EPA's approach to targeting enforcement under the SDWA. The ERP focuses on waterworks with health-based violations and a history of noncompliance. The policy also ensures consistency, provides a model to escalate responses to violations, defines timely and appropriate actions, and defines what constitutes a formal action.

# III. Profile of Waterworks in Virginia

This section provides a profile of waterworks in Virginia for CY 2025. ODW regulates 2,893 waterworks that serve drinking water to the Commonwealth, which has a population of approximately 8.88 million[4]. The size, number, and types of waterworks and their service populations are detailed below. This section also discusses the sources of drinking water in Virginia, as well as the types of waterworks owners.

## A. Inventory of Waterworks

ODW regulates 2,893 waterworks in Virginia. ODW anticipates this number to increase as ODW identifies more businesses, and other entities, that use private wells and serve drinking water to 25 or

[4] U.S. Census Bureau QuickFacts: Virginia: The figure is based on the Census data for July 1, 2025.

more people for at least 60 days per year. While ODW encourages smaller, underperforming waterworks to consolidate or regionalize with higher performing waterworks when feasible, rural development projects could also create new well systems that meet the definition of a waterworks. A struggling waterworks owner that can connect to a local water supply may choose to consolidate rather than continue to operate the waterworks. The option to connect to another water supply is location dependent.

In Virginia, the 15 largest community waterworks serve approximately 4.64 million people, or 62.3% of the community water system population. In contrast, 916 small and very small community waterworks serve approximately 466,000 people, or 6.2% of the community water system population. Community waterworks provide water to the homes of about 83.9% of Virginians. Historical data shows violations are more common at small or very small community waterworks, particularly those that lack the technical, managerial, or financial capability to operate a waterworks in compliance with the Regulations. Small or very small community waterworks with ongoing or recurring noncompliance also tend to serve disadvantaged communities, such as rural towns, mobile home parks, and housing developments.

TNC waterworks are the most common type of waterworks and typically represent the greatest percentage of violations. Owners of TNC waterworks, such as marinas, restaurants, and campgrounds, often include a single well and distribution system. Owners may not have experience or familiarity with the Regulations, or sufficient technical, managerial, and financial capability to successfully own and operate a waterworks.

Tables 1A, 1B and 2, as well as Figures 1 through 3, summarize the size and type of waterworks in Virginia.

**Table 1A.** Number, Population, and Percent of All Waterworks by Size.

| Waterworks Size | Number | Population | % of Total Pop. |
|---|---|---|---|
| Very Large Systems (>100,001) | 15 | 4,636,207 | 58.5% |
| Large Systems (10,001-100,000) | 60 | 1,991,174 | 25.1% |
| Medium Systems (3,301-10,000) | 82 | 485,535 | 6.1% |
| Small Systems (501-3,300) | 397 | 520,036 | 6.6% |
| Very Small Systems (25-500) | 2,339 | 294,557 | 3.7% |
| **Total** | **2,893** | **7,927,509** | **100%** |

**Table 1B.** Number, Population, and Percent of Community Waterworks by Size.

| Community Waterworks Size | Number | Population | % of Total Pop. |
|---|---|---|---|
| Very Large Systems (>100,001) | 15 | 4,636,207 | 62.3% |
| Large Systems (10,001-100,000) | 56 | 1,864,782 | 25.0% |
| Medium Systems (3,301-10,000) | 81 | 479,072 | 6.4% |
| Small Systems (501-3,300) | 236 | 360,978 | 4.8% |
| Very Small Systems (25-500) | 680 | 105,330 | 1.4% |
| **Total** | **1,068** | **7,446,369** | **100%** |

**Figure 1.** Percent of Community Waterworks by Size Classification.

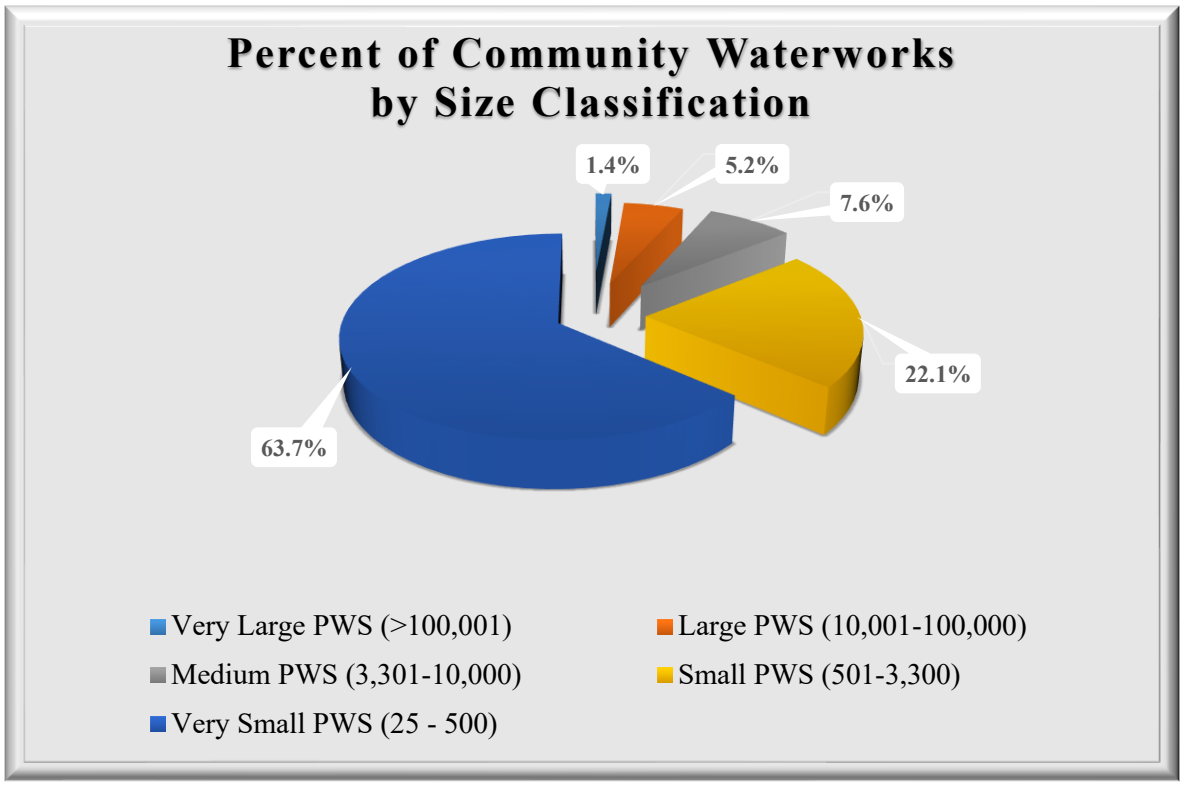

**Figure 2.** Percent Population Served in Virginia by Community Waterworks of Various Size Classifications.

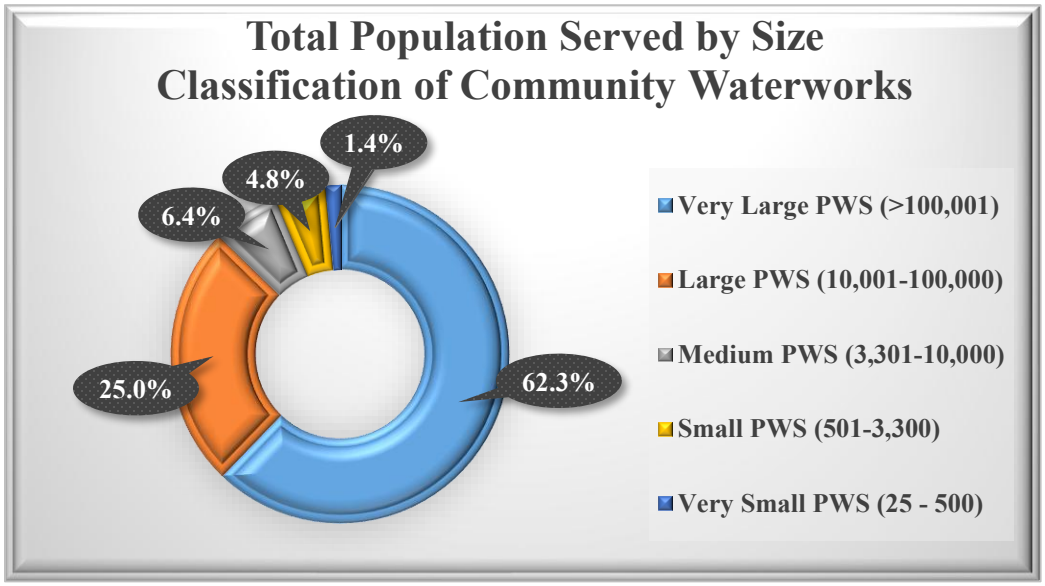

**Table 2.** Number and Percent of Waterworks by Type.

| Type | Number | % of Total |
|---|---|---|
| Community | 1,068 | 36.9% |
| Non-transient Non-community | 512 | 17.7% |
| Transient Non-community | 1,313 | 45.4% |
| **Total** | 2,893 | 100% |

**Figure 3.** Waterworks by Type.

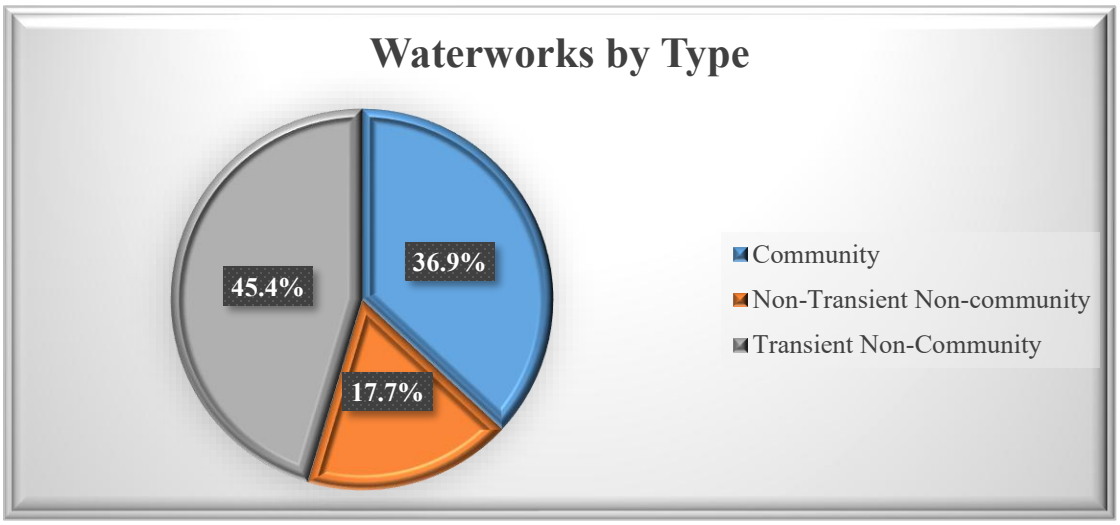

**Figure 4.** Number of Waterworks by Size Compared to the Service Populations.

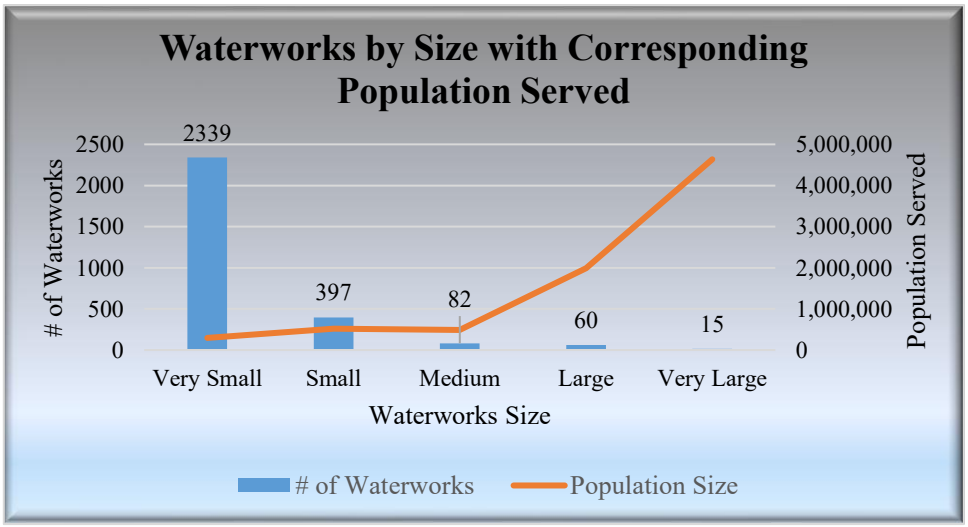

Presented another way, Figure 4 compares the number of public waterworks by size with the populations they serve. Notably, the 75 large and very large waterworks serve nearly 84% of the population served by

waterworks in Virginia.

**Figure 5.** The Largest Waterworks in Virginia and Population Served.

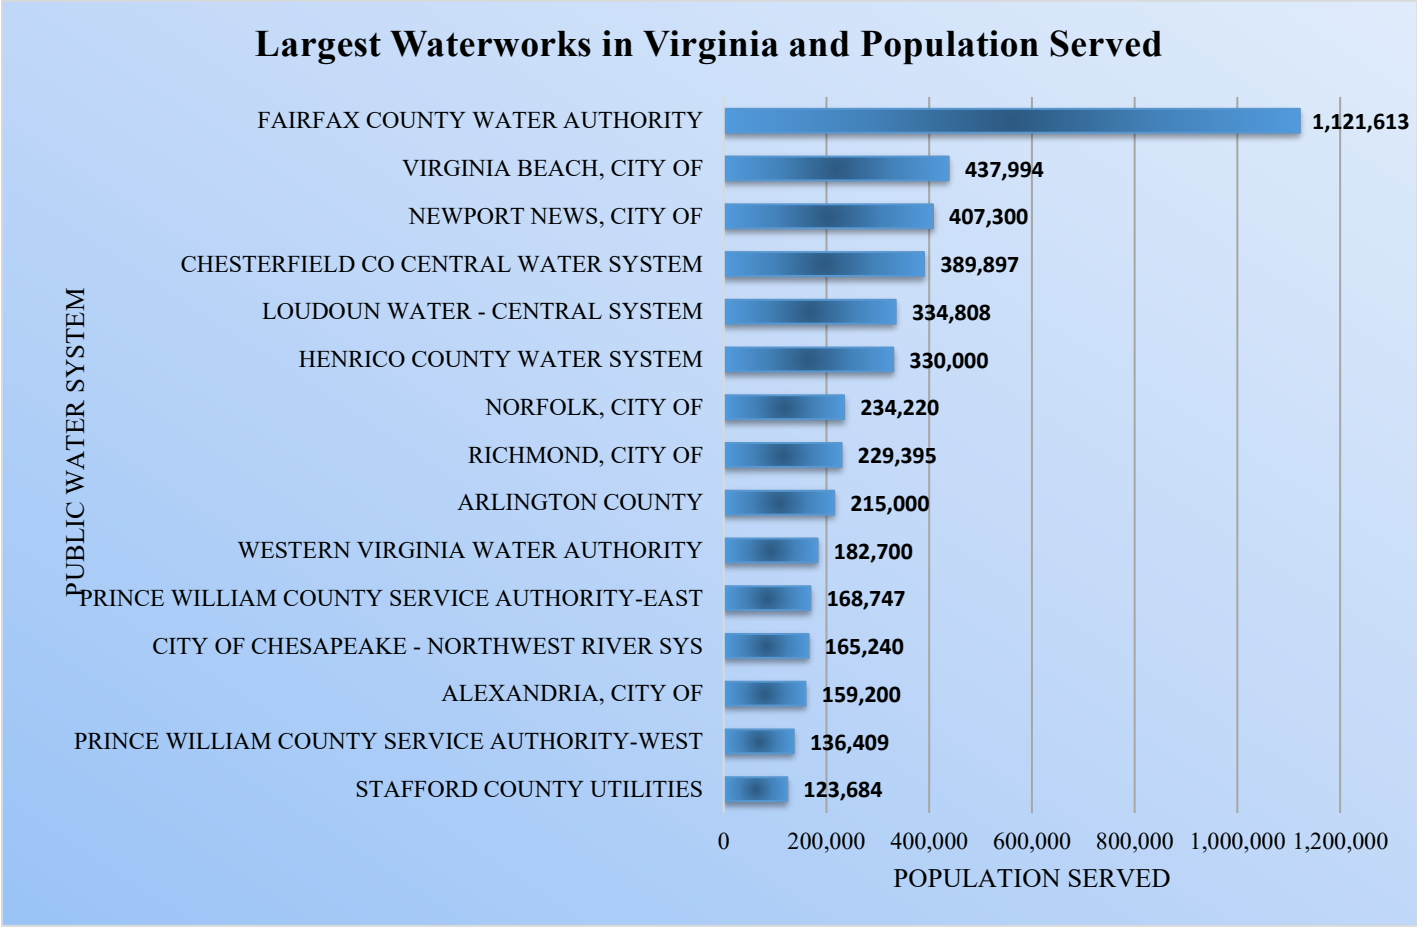

Figure 5 lists the 15 largest waterworks and shows the corresponding population served by each system. By contrast, the 2,339 very small waterworks serve a significantly smaller population yet account for 1,469, or 83.2%, of the violations presented in Chapter IV.

## B. Sources of Drinking Water

Waterworks may use groundwater or surface water as their drinking water supply. Drinking water standards, treatment, monitoring, and reporting requirements differ depending on the water source. The process for withdrawing, treating, and distributing surface water is more complex than a groundwater well. Approximately 86% of waterworks in Virginia use groundwater as the drinking water supply (Figure 6), but groundwater systems serve a small percentage of the population (Figure 7B). TNC waterworks most commonly use groundwater. (Figure 7A.) Most of the population receives its drinking water from a surface water supply.

There are 315 CWS that draw directly from surface waters such as rivers, creeks, or reservoirs (Figure 7A), and they serve over 6.9 million people (Figure 7B) – about 93% of the total CWS customer population.

The source of drinking water may correlate with the type of noncompliance. For example, waterworks

operating a groundwater system may be more likely to receive a violation under the Revised Total Coliform Rule (RTCR) related to bacteriological monitoring and reporting, compared to waterworks using a surface water supply that are more prone to the formation of disinfection byproducts from organic matter in the source water.

**Figure 6.** Percent of Waterworks by Water Source.

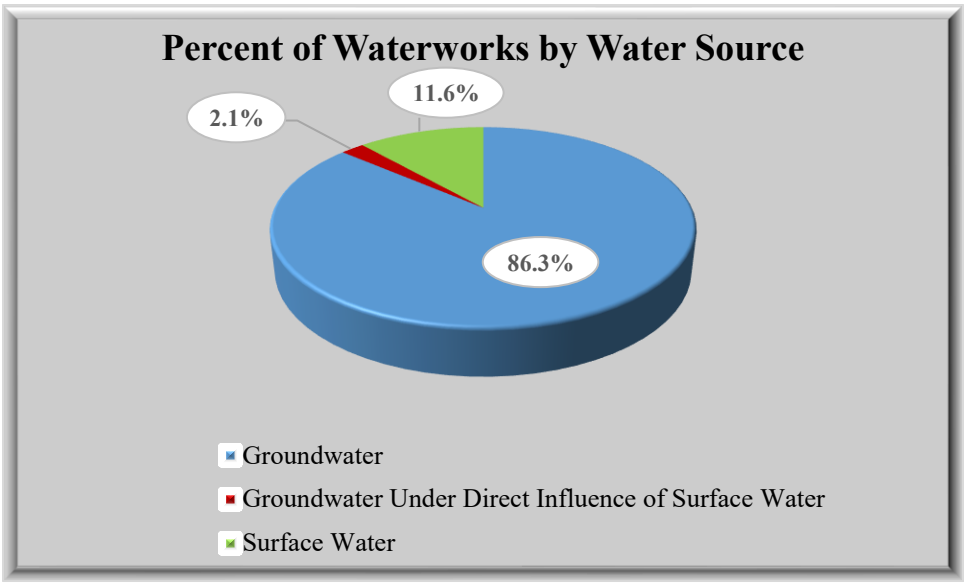

**Figure 7A.** Water System Type by Source of Water.

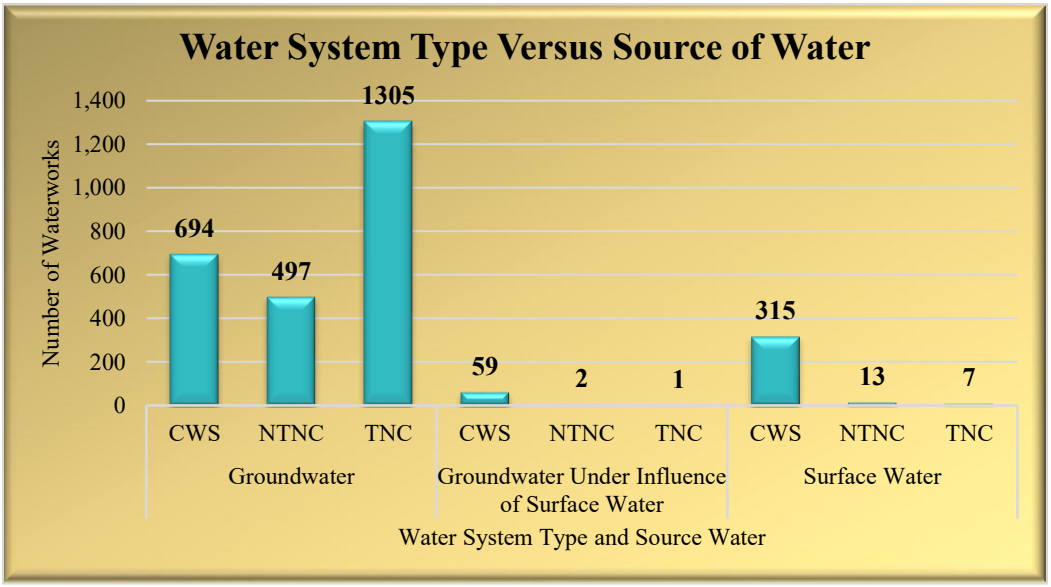

**Figure 7B.** Population Served by Waterworks Type and Source Water.

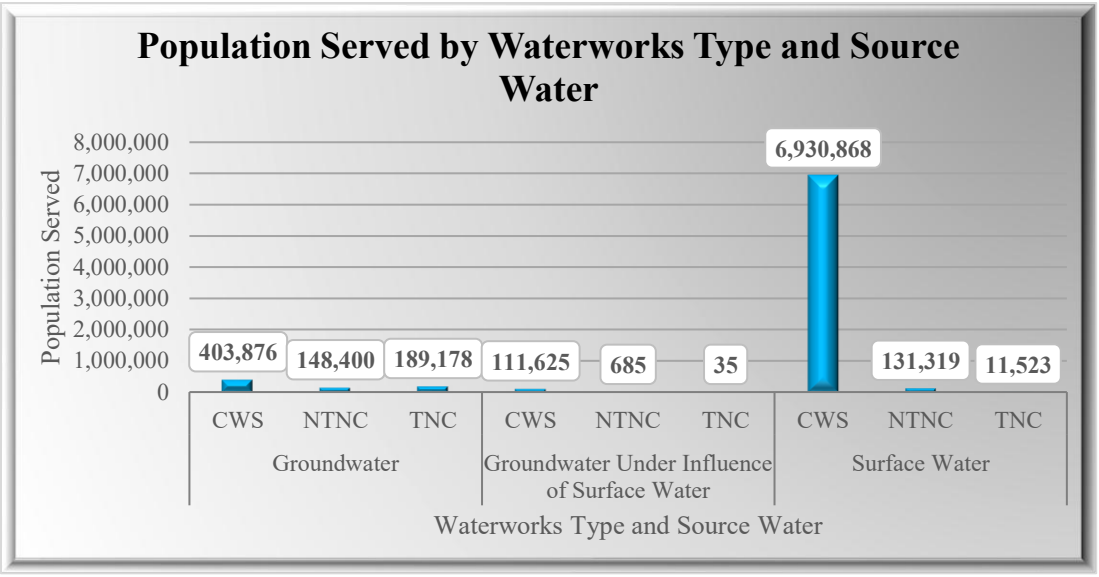

## C. Owners of Waterworks

Waterworks owners in Virginia include local, state, and federal governments, public/private partnerships, and private entities. Private entities own 65.3% of waterworks in Virginia. Local governments, including authorities, account for 27.5% of waterworks owners and serve the greatest population, as demonstrated in Figures 8 and 9. Local government entities serve approximately 6.88 million people, or 86.8% of the population of waterworks users.

**Figure 8.** Number of Waterworks by Ownership Type.

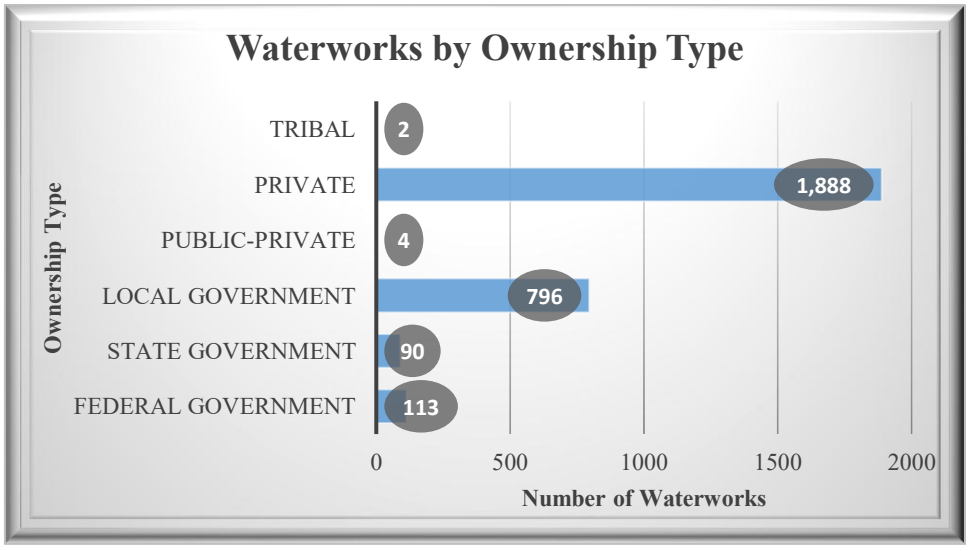

**Figure 9.** Percent Population Served by Owner Type.

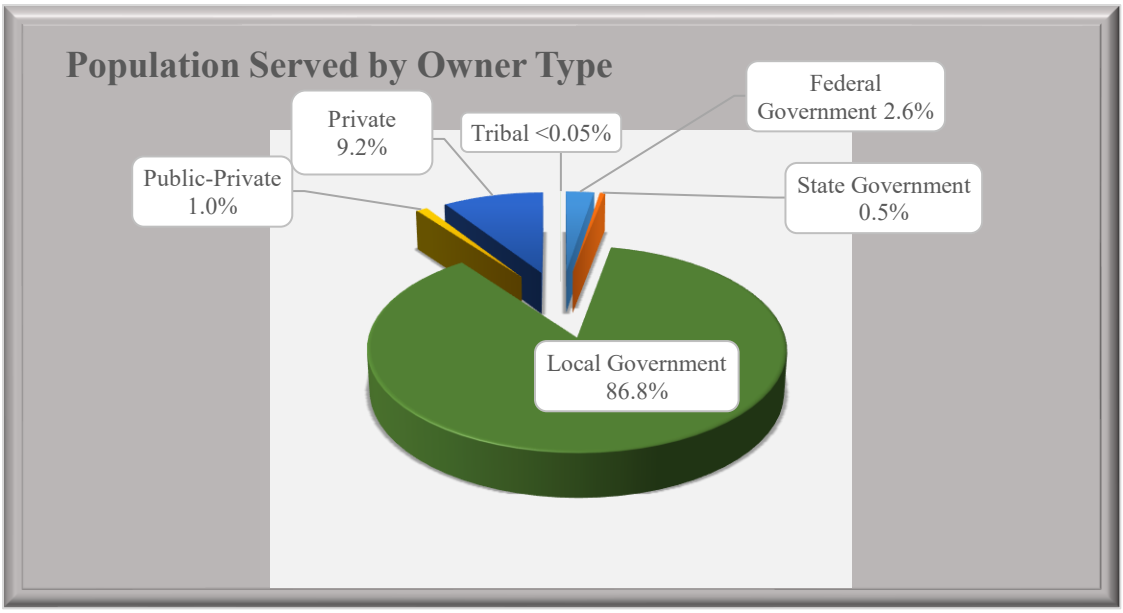

# IV. Summary of Violations in Virginia

This section details violations of federal drinking water standards at waterworks in Virginia for 2025 and describes actions that ODW may take to return a waterworks to compliance. This section of the report improves accountability, program performance, and strategic planning for the drinking water program in Virginia. Sharing this data with the public educates consumers on the quality and safety of their drinking water so they can make informed decisions about their health. The regulatory rules identified in this section are based on the NPDWR and have been incorporated into the Regulations.

## A. Geographical Location of Violations

Figure 10 shows the distribution of violations in Virginia according to the population served by the waterworks for 2025. The colors, from clear to burgundy, represent the number of violations per waterworks: clear indicates 1-2 violations per waterworks; yellow, 3-7 violations; orange, 8-17 violations; red, 18-42 violations; and burgundy, 43-147 violations per waterworks. The size of the circle represents the size of the waterworks based on the population served, as defined in Chapter III.

**Figure 10.** Number of Violations by Waterworks Size.

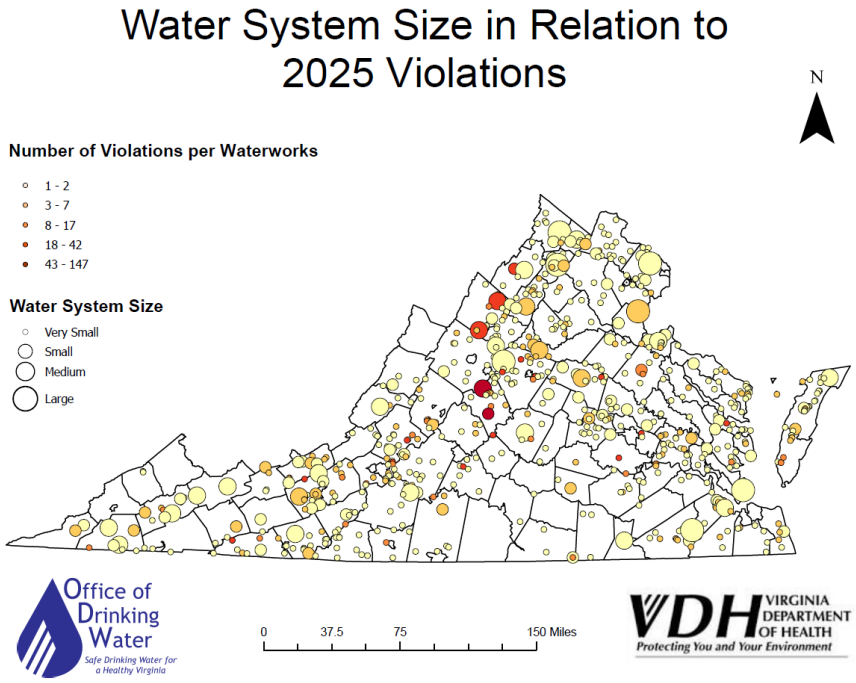

**Figure 11A.** Distribution of Violations.

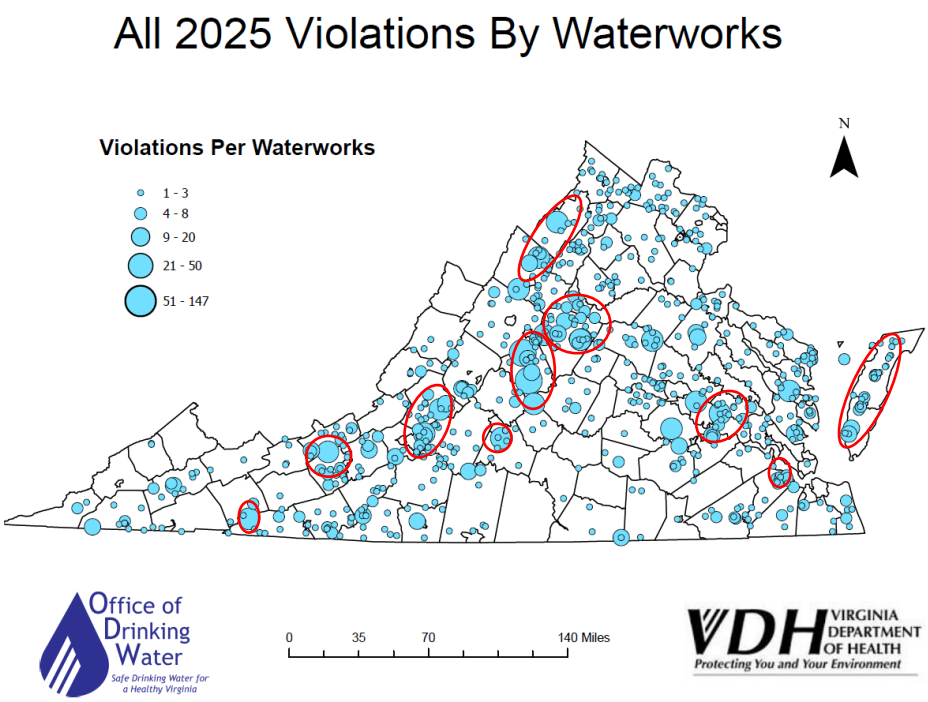

Figure 11A shows ten significant clusters of violations that, going left to right, begins in the west-southwest, travels up into the most northern end of the state along Interstate 81, broadens out into the western edge of the piedmont along Interstate 64, travels down Interstate 95 in the Richmond metropolitan area, progresses southeast into the coastal plain near Smithfield, and out onto the Virginia Peninsula. These clusters are further reflected in the violation density map below in Figure 12.

**Figure 11B.** Distribution of Acute Health-Based & Health-Based Violations.

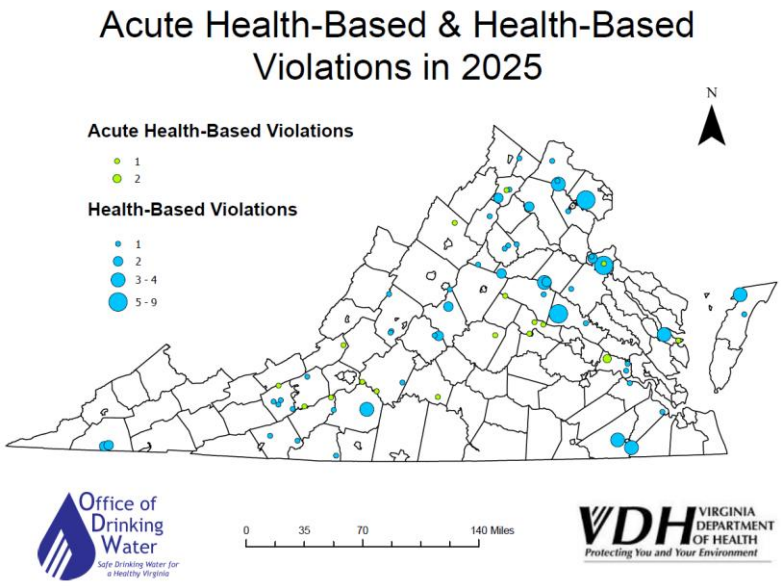

Figure 11B represents acute health-based and health-based violations that have occurred throughout Virginia during 2025. Acute health-based violations are those that may cause illness after a short-term exposure. Chronic health-based violations fall into one of three categories: 1) exceedances of the maximum contaminant levels (MCLs), which specify the highest allowable contaminant concentrations in drinking water; 2) exceedances of the maximum residual disinfectant levels (MRDLs), which specify the highest concentrations of disinfectants allowed in drinking water; and 3) treatment technique requirements, which specify certain processes intended to reduce the level of a contaminant.

**Figure 12.** Waterworks Violation Density.

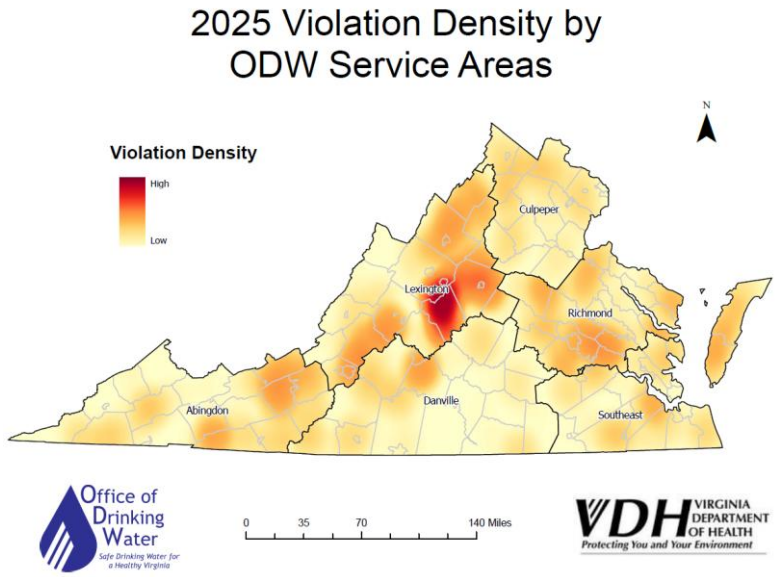

Figure 12 shows the locations in Virginia by the ODW Field Office service areas that had the highest density of violations issued during 2025.

**Figure 13A.** Number of Violations by County.

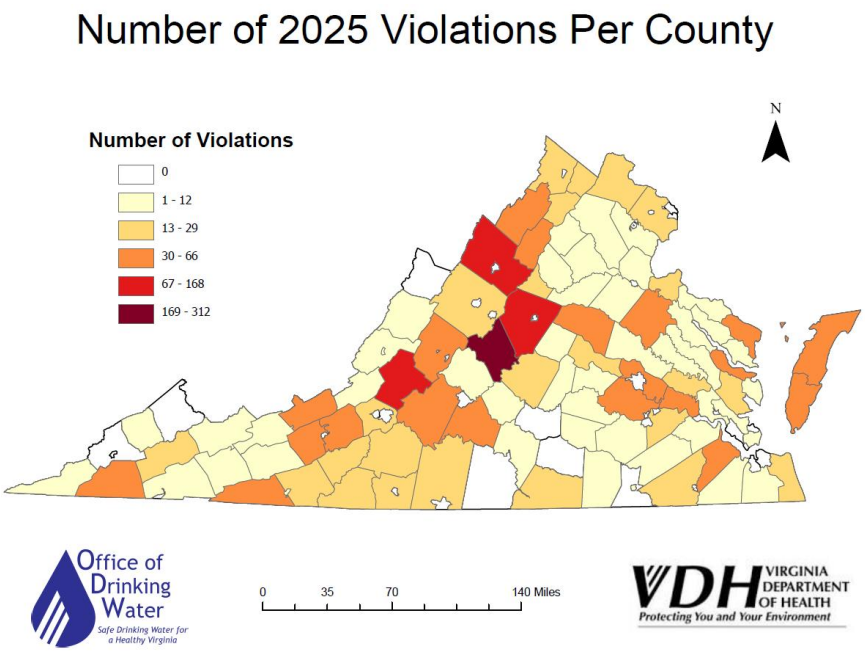

Figure 13A shows the number of violations by county, with waterworks in Nelson County having the most. The counties in red – Botetourt, Rockingham, and Albemarle – had waterworks that received the second-most violations. Counties colored orange have waterworks with relatively fewer violations but still indicate areas of concern.

**Figure 13B.** Number of Waterworks with Violations by County.

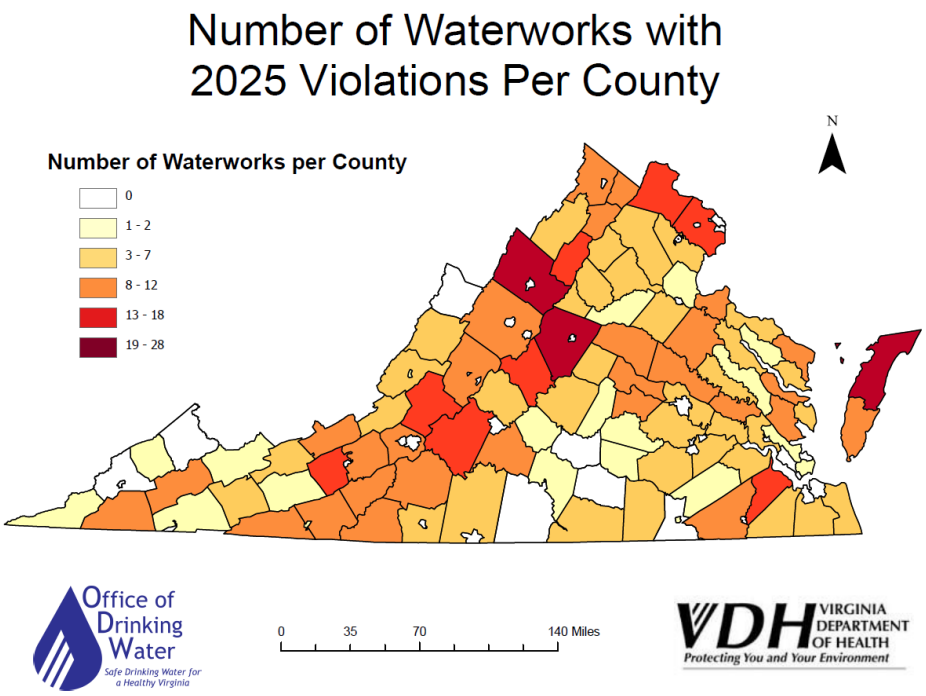

Figure 13B shows Rockingham, Albemarle, and Accomack Counties, from left to right on the map, having the highest number of water systems with violations in 2025.

## B. Compliance Monitoring

In 2025, 2,208 of the 2,893 waterworks in Virginia had no violations. At least one violation occurred in 685 waterworks. Waterworks had a total of 2,211 violations in 2025, with 117 of them being health-based violations (acute and chronic). Twenty-six waterworks were serious violators according to EPA's ETT score. The statistics may include some violations that were issued prior to 2025. A violation may not be resolved in the same year it was issued. How long it takes a waterworks to return to compliance depends on the type of violation and the methods the waterworks takes to resolve the violation.

**Figure 14.** Waterworks with Violations by Public Water System Type.

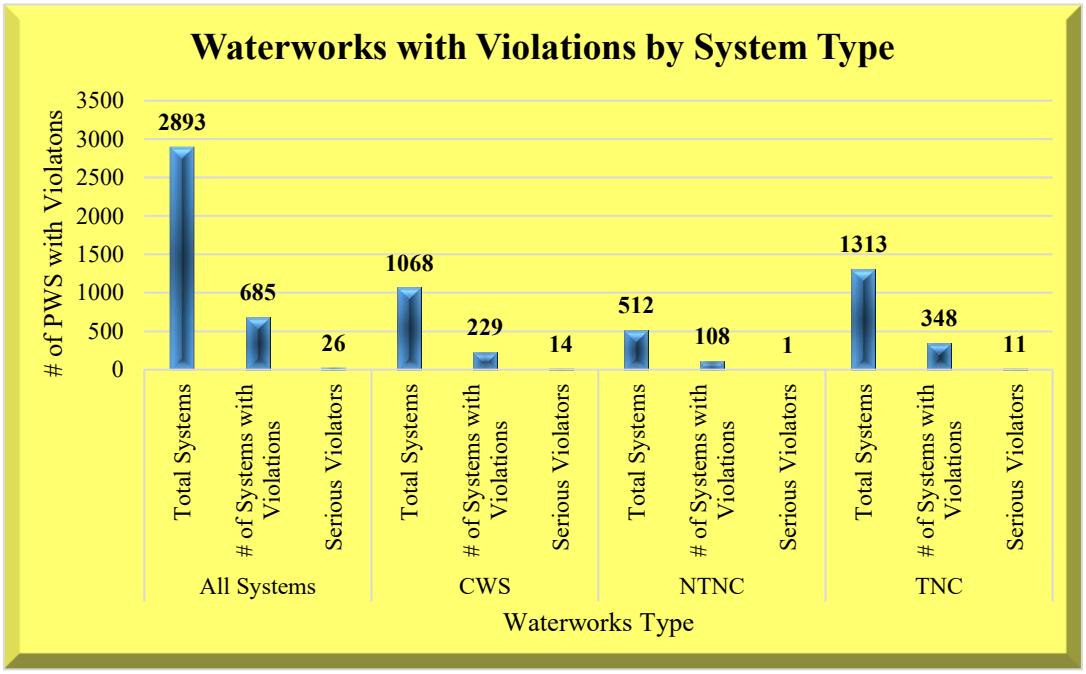

Figure 14 shows the number of waterworks with violations by waterworks type, as well as the number of serious violators[5]. In 2025, 24% of all waterworks monitored received violations. Of those water systems with violations, 33% were issued to CWS, 16% were issued to NTNCs, and 51% were issued to TNCs.

[5] A "serious violator" has an ETT score of more than 10.

**Figure 15.** Types of Violations Issued in 2025.

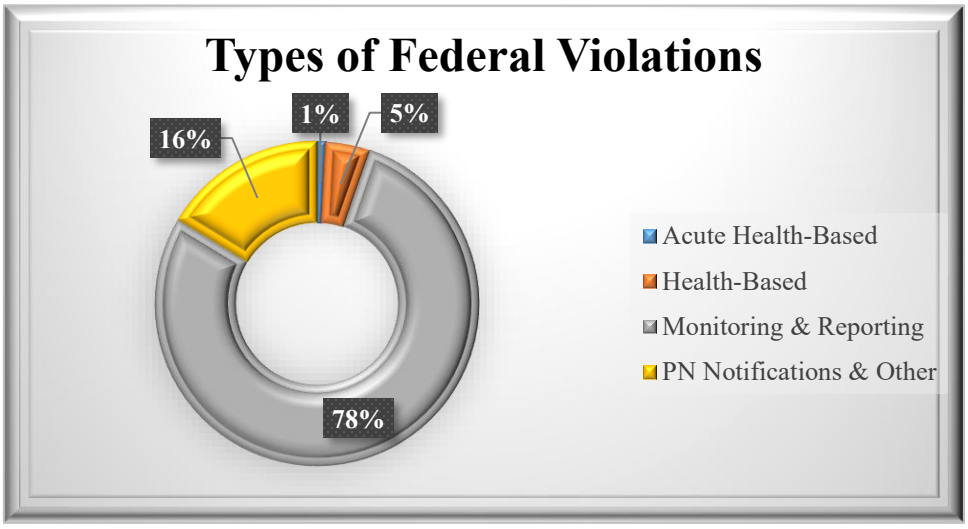

**Figure 16.** Public Water Supplies with Violation by Rule.

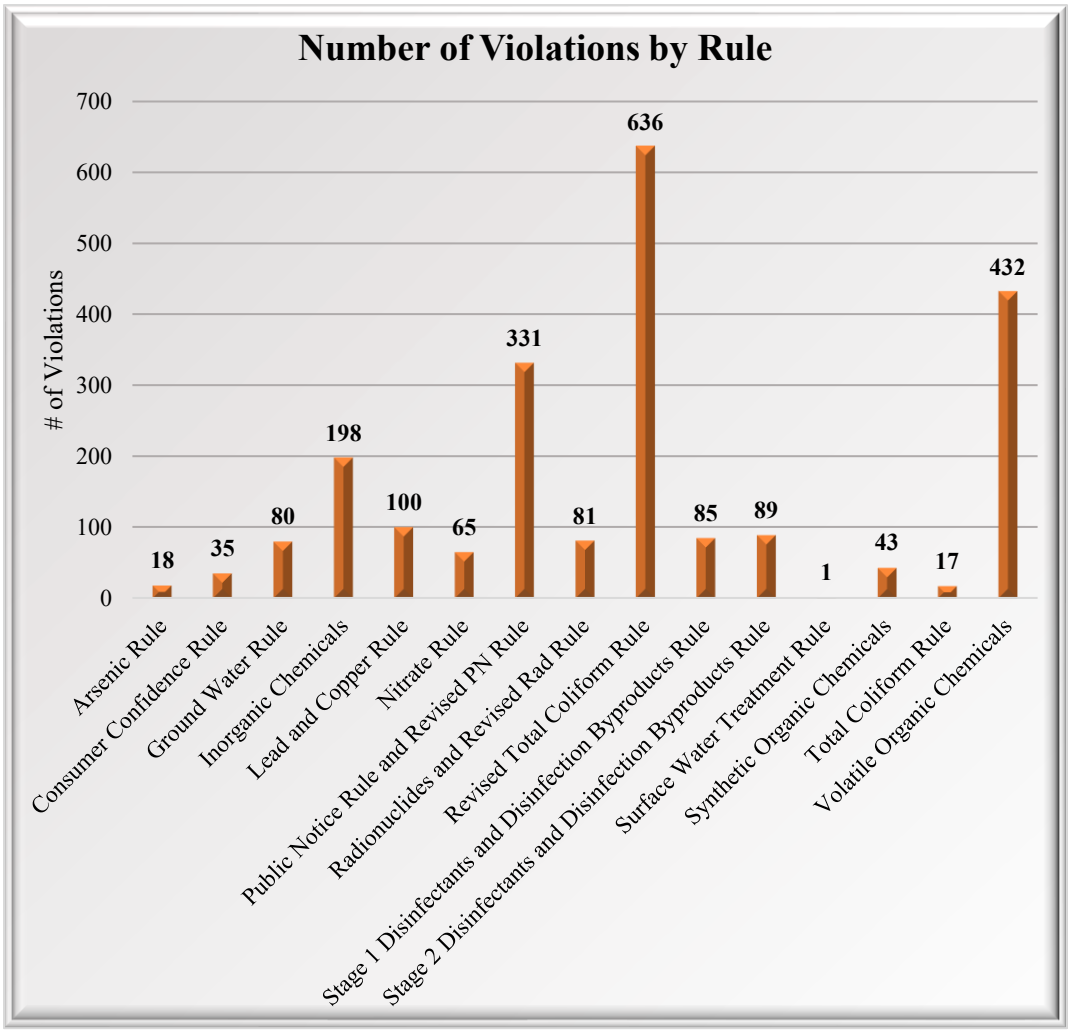

Figure 16 shows the number of violations issued by Rule in Virginia for 2025. The Revised Total Coliform Rule had more violations than any other violation category, followed by volatile organic chemicals violations and the Public Notice Rule.

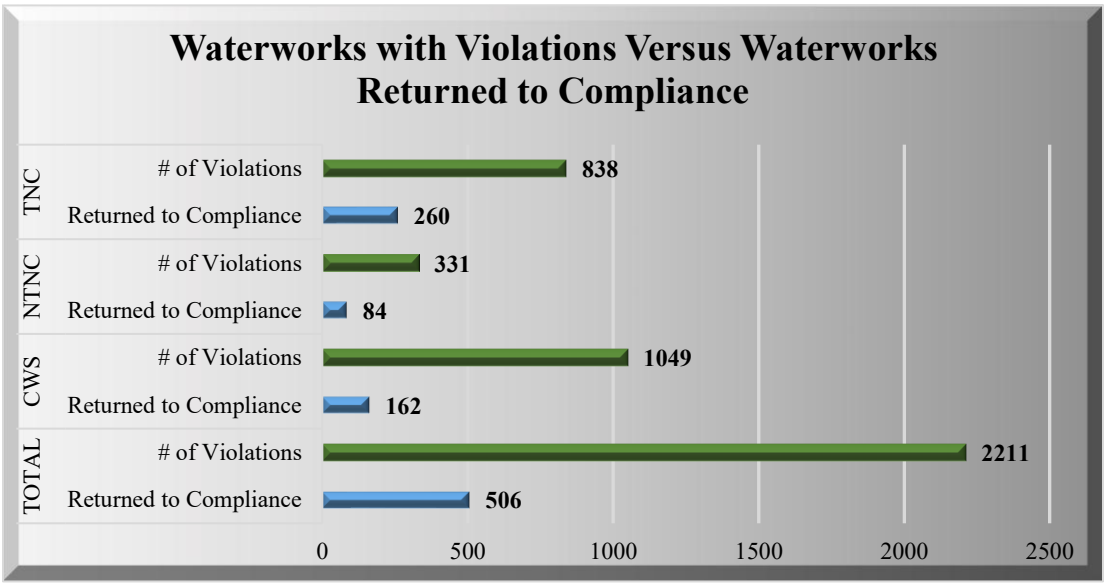
The majority of waterworks with violations return to compliance within the same year. Some health-based violations may require additional monitoring, changes to operation or treatment technology, or other repairs or infrastructure improvements that extend beyond one year. Violations that present a greater potential for harm to public health and require more than six months to return to compliance are more likely to be addressed with formal enforcement action. ODW strives to respond to health-based violations before the waterworks becomes a serious violator. Violations that may be returned to compliance once the waterworks owner samples following a missed monitoring period or submits a certification following a public notice or consumer confidence report requirement, are often addressed with an informal enforcement response. VDH monitors and tracks waterworks with ongoing or recurring violations to identify repeat violators that may require an elevated enforcement response.

**Figure 17.** Waterworks with Violations Versus Waterworks Returned to Compliance in 2025.



## C. Enforcement Actions

After issuing an NOAV, ODW staff track the compliance status to see if the waterworks returns to compliance with assistance or if an elevated enforcement response is appropriate. In many instances, the waterworks owner resolves the violation soon after ODW issues the NOAV. ODW staff from the TCDO, DTS, and FCAP divisions often assist the waterworks owner with financial, managerial, or technical needs. In cases where the waterworks does not return to compliance voluntarily within a reasonable amount of time, ODW pursues enforcement measures, which may ultimately result in a formal enforcement action that often includes a monetary penalty, corrective action plan, and schedule for compliance.

Enforcement actions may be informal or formal, and are generally administrative (non-judicial) in nature. For purposes of this report, ODW informal enforcement actions include NOAVs, requests for public

notice, and return to compliance codes. ODW informal enforcement actions also include warning letters and letters of agreement, but they are not included in the data in this report. Warning letters identify outstanding violations and set forth a timeframe in which the owner is expected to return to compliance or else potentially face formal enforcement. Letters of agreement may be used for waterworks owners that have demonstrated a "good faith" effort to comply with the Regulations, are not listed on the ETT, and the corrective action can be completed in less than one year. Warning letters and letters of agreement may be actions that ODW takes between issuing an NOAV and initiating formal enforcement.

Formal enforcement includes administrative orders – consent orders and special orders – that may assess civil penalties and require corrective actions. Formal enforcement actions are binding and enforceable through the court system. Formal enforcement may be required when the waterworks is listed as a "serious violator" or Enforcement Priority on the ETT because the waterworks' ETT score is greater than 10.

With administrative, civil, and criminal enforcement actions, ODW staff selects the most appropriate enforcement method for each situation and associated violations. In determining the appropriate enforcement action, ODW may consider the size and type of the waterworks, the risk of harm to public health, and the willingness of the waterworks owner to cooperate.

ODW resolves most noncompliance through the administrative process with the waterworks owner's consent. ODW strives to address and resolve all cases in a timely fashion, considering the nature of the case and the availability of resources; however, certain cases may take longer to resolve due to the complexity of the issues involved.

### i. Informal Enforcement Actions

Informal enforcement is appropriate for waterworks that are responsive, cooperative, and demonstrate a "good faith" effort to comply with the Regulations. ODW encourages informal enforcement for waterworks that are not listed on the ETT. If the waterworks has an ETT score greater than 5, formal enforcement (with or without consent) is generally more appropriate. In most cases, enforcement starts with informal actions and progresses to formal actions, as necessary.

**Figure 18.** Waterworks with Resolved, Informal, and Formal Enforcement Actions in Virginia for 2021 - 2025.

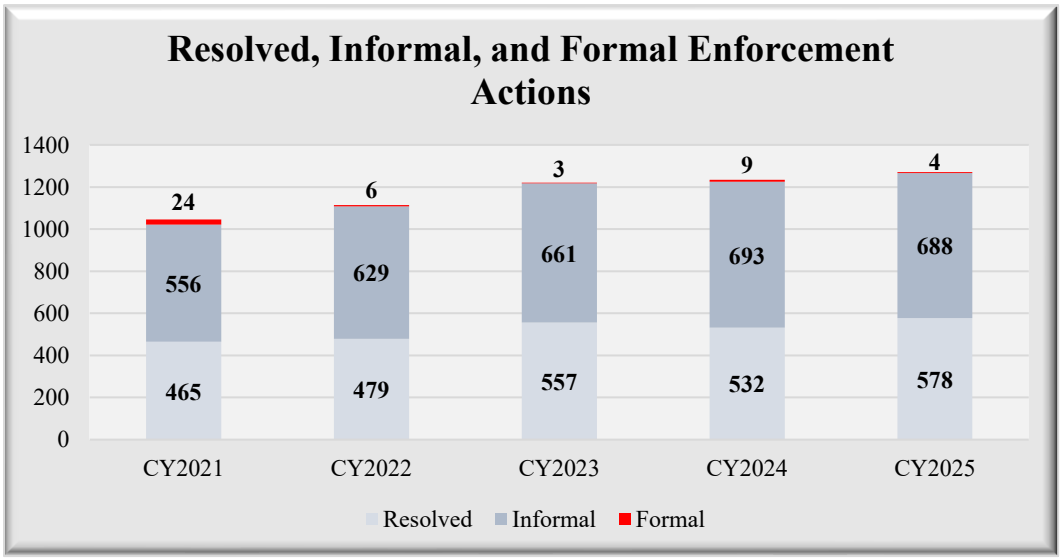


Figure 18 shows that in 2025, 688 waterworks were given informal enforcement actions, and 4 waterworks were placed under formal enforcement[6]. When a waterworks receives a violation, it is required to complete the public notice requirement within a deadline. If a public notice is not posted and returned along with the certification form to ODW by the due date, then ODW sends an additional NOAV to the waterworks.

### ii. Formal Enforcement Actions

As described in Chapter II, the ERP defines formal enforcement as actions that require specific steps for the waterworks to return to compliance, cites specific violations, and is independently enforceable without having to prove the original violation. Formal enforcement includes administrative orders (with or without consent) and judicial actions through the civil or criminal court.

Consent orders are the most appropriate tool when the waterworks is willing to cooperate with ODW to resolve noncompliance in a timely and appropriate manner. A consent order is an administrative order issued on behalf of the Board to a waterworks owner, with their consent, requiring that the waterworks perform a set of actions to return the waterworks to compliance. Consent orders allow the waterworks owner to participate in developing the corrective action plan and schedule for compliance and usually results in quicker resolution.

If the waterworks is not willing to cooperate or does not agree to the terms of a consent order, then ODW may hold an administrative proceeding to provide the waterworks owner with an opportunity to be heard and determine the fact basis for a case decision. Depending on the findings that result from the proceeding, the Commissioner may issue a special order that compels compliance unilaterally. An administrative hearing must be held before a special order can be issued. The data in this report does not distinguish between consent orders and special orders.

In 2025, four waterworks had formal enforcement actions. Depending on the nature of the violation, the size and sophistication of the waterworks, and the ability of the waterworks to comply with the requirements, formal actions may include a civil penalty, corrective action plan, and schedule for compliance. In 2025, all four formal enforcement actions included civil penalties, which totaled $11,257.60. In addition to the four new administrative orders issued in 2025, ODW continued to monitor compliance with existing administrative orders and court orders, bringing additional formal enforcement action as needed.

### iii. Trends in Compliance and Enforcement

ODW continues to carefully monitor compliance and adjust its policies and procedures as necessary to reduce the number of violations across the state. ODW continues to prioritize those systems with health-based violations, which is reflected in the lower number of health-based violations and serious violators for the compliance periods below (specifically from 2021 to 2025). ODW addresses problems proactively, as soon as a problem is known to exist, and uses administrative orders as a tool for accessing additional resources that may be necessary to address longer-term noncompliance.

In recent years, Virginia has been at or below the averages for violation percentages compared to EPA Region 3 and nationally, as reflected in Figures 19 through 24. Percentages nationally for 2021 to 2025

[6] The number of formal enforcement actions includes those formal enforcement actions that became effective in 2025. It does not include pre-existing formal enforcement actions that became effective prior to 2025 and that are still in effect and being monitored by ODW.

report more formal enforcement than introduced in Virginia or Region 3. Review of the number and identity of "serious violators" in the ETT Reports in 2025 show that ODW has effectively addressed many of the violators before they present as a "serious violator" on the ETT Report. Seventeen of the 26 serious violators (65%) in 2025 were actually back in full compliance or under an administrative order by the time they appeared on the ETT Report as a serious violator.[7] This statistic reflects that ODW's proactive approach to compliance and enforcement is largely successful in returning waterworks to compliance or having the system under an administrative order before they are presented as a "serious violator" by EPA.

Figures 19 – 24 reflect that ODW staff are proactively working with waterworks which helps to lower the number of violations issued, decreases the number of acute and chronic health-based violations, decreases the number of monitoring and reporting violations, and decreases the number of serious violators on the ETT Report with unresolved violations.

**Figure 19.** Percentage of PWS with Violations in Virginia Compared to EPA Region 3 and National Averages for 2021 to 2025.[8]

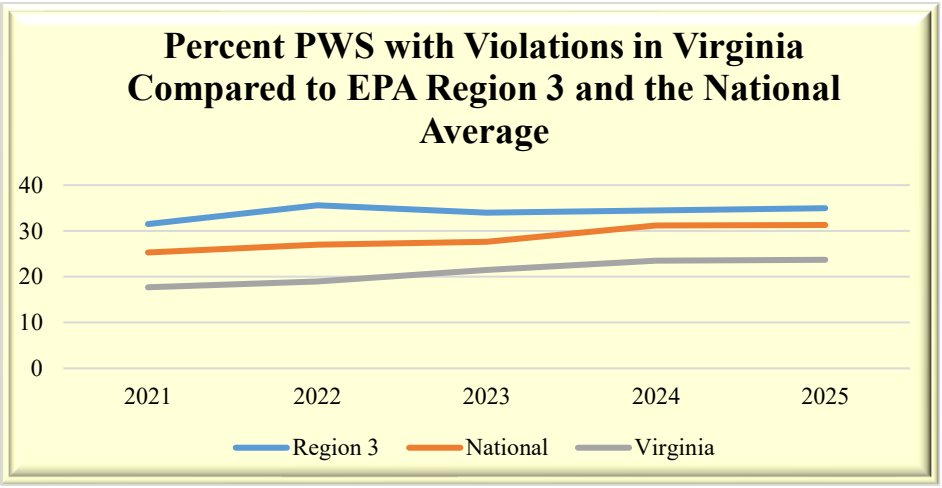

Figure 19 displays the percentage of waterworks in Virginia that received violations versus those within EPA Region 3 and the national average. While Virgina remains below the levels in Region 3 and nationally, Virginia has been issuing more violations to waterworks in 2024 and 2025 than in previous years.

[7] There is a delay from when the data that is reflected in the ETT Report is uploaded by ODW and when the ETT Report is available to ODW for download, such that a waterworks' status of violations can change in the interim.

[8] EPA Region 3 (Mid-Atlantic) includes Delaware, the District of Columbia, Maryland, Pennsylvania, Virginia and West Virginia. Region 3 data includes Virginia in each Figure represented from 19-24.

**Figure 20 A.** Percentage of Acute Health-Based Violations in Virginia Compared to EPA Region 3 and National Averages for 2021 to 2025.

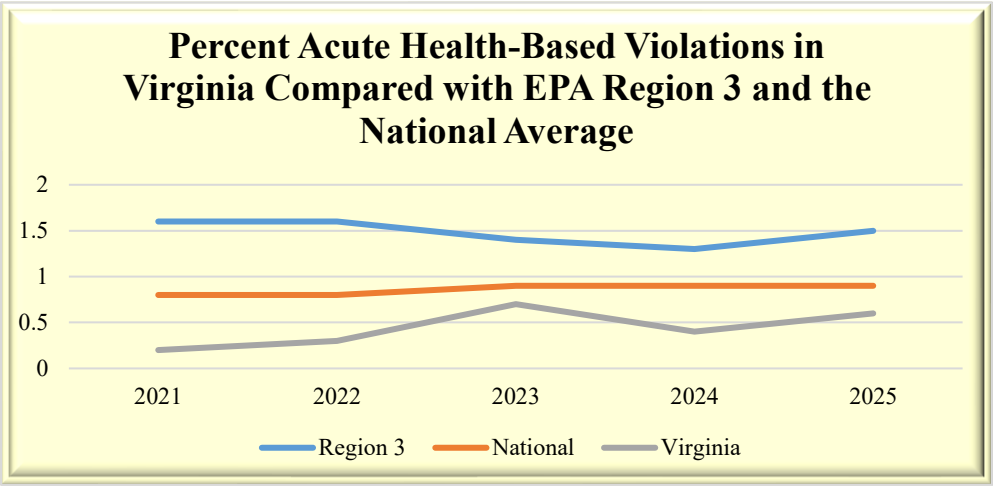

**Figure 20 B.** Percentage of Health-Based Violations in Virginia Compared to EPA Region 3 and National Averages for 2021 to 2025.

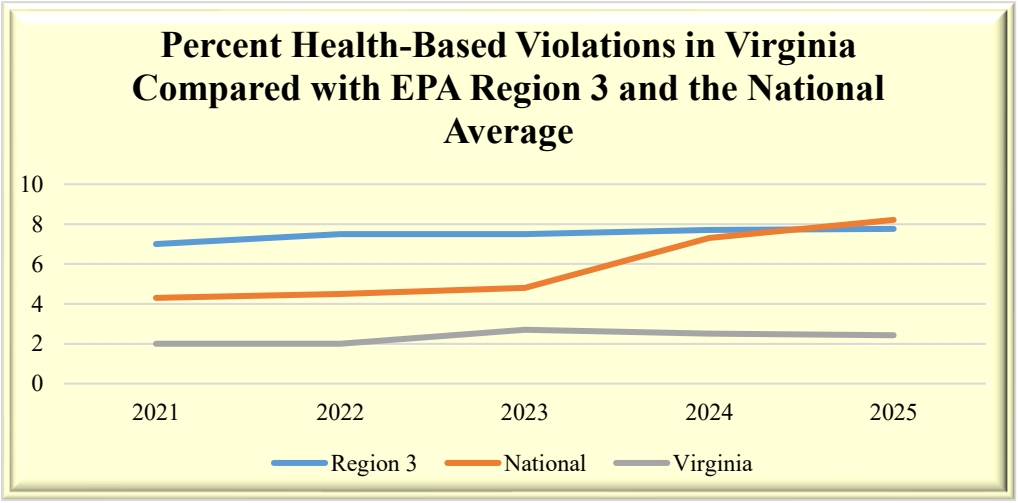

Figures 20 A and B demonstrate Virginia's efforts to work with waterworks owners and operators as soon as sample results indicate a problem. Onsite inspections are performed to assess issues and determine if additional disinfection and/or treatment is needed. These efforts have contributed to Virginia's rate of acute health-based and health-based violations being below the national average and EPA Region 3.

**Figure 21.** Percentage of Monitoring and Reporting Violations in Virginia Compared to EPA Region 3 and National Averages for 2021 to 2025.

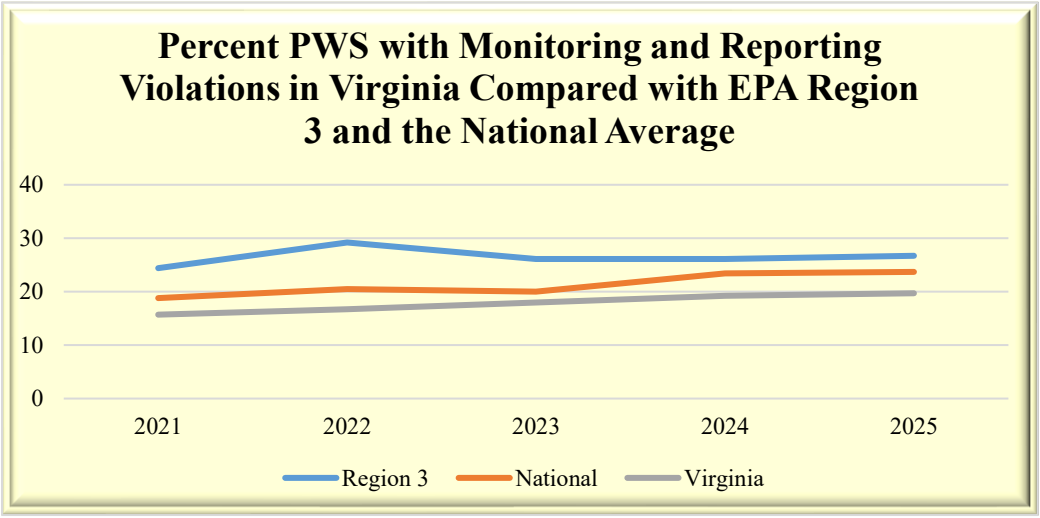

Figure 21 is evidence of the dedication of ODW staff working with owners and operators of public water systems to make sure samples are collected and reports are submitted on time, as Virginia's percentage of monitoring and reporting violations remains below the national and EPA Region 3 averages; though it has been slowly increasing over the years. ODW has implemented proactive measures, such as electronic reminders to waterworks about sampling requirements, to try to keep the number of violations low.

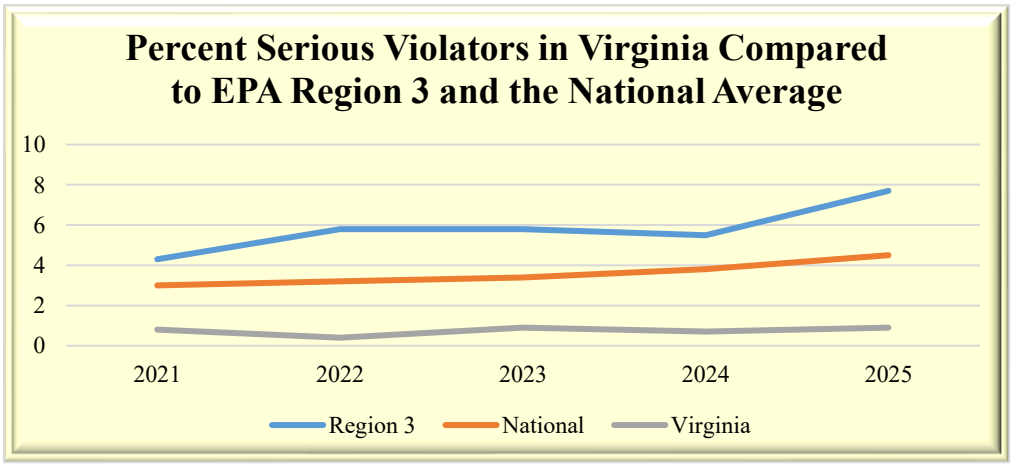
**Figure 22.** Percentage of Serious Violator Waterworks in Virginia Compared to EPA Region 3 and National Averages for 2021 to 2025.



As shown in Figure 22, Virginia continues to have a lower percentage of serious violators under the ETT than the national and EPA Region 3 averages in 2025.

**Figure 23.** Percentage of Formal Enforcement Actions in Virginia Compared to EPA Region 3 and National Averages for 2021 to 2025.

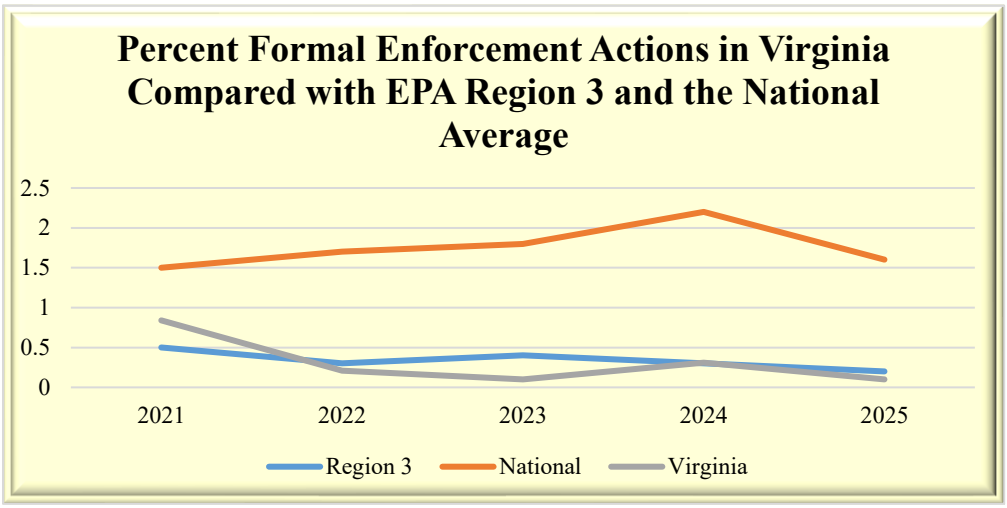


Figure 23 reflects that in 2024 and 2025, Virginia has been very similar to the other states in Region 3 when it comes to the percentage of formal enforcement actions. 2025 shows a drop in formal enforcement actions as ODW's informal enforcement efforts were able to effectively bring the vast majority of violations back into compliance before formal enforcement became necessary.

**Figure 24.** Percentage of Informal Enforcement Actions in Virginia Compared to EPA Region 3 and National Averages for 2021 to 2025.

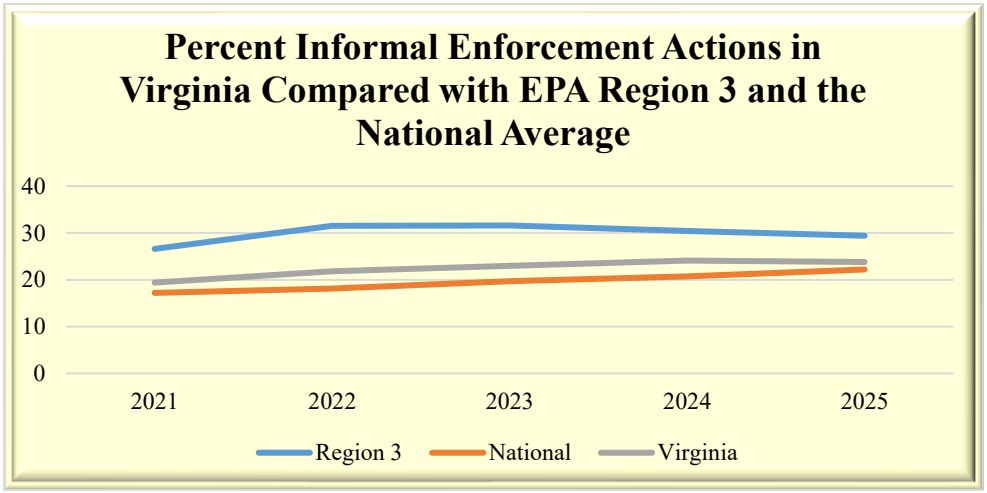

Figure 24 highlights that Virginia exceeds the national average in taking informal enforcement actions. ODW's use of informal enforcement is part of its effort to address violations quickly to prevent water systems from becoming formal enforcement cases. ODW staff actively engage with waterworks personnel to address violations and, when appropriate, work with waterworks personnel to provide technical assistance and funding to bring these water systems back into compliance as quickly as possible.

# V. Enforcement Program Oversight

This section describes initiatives that ODW is working on to improve its oversight, management, and strategic planning of compliance in Virginia. ODW first issued its Enforcement Manual in 2020 to create policies and procedures for monitoring, tracking, and prioritizing noncompliance, and referring for enforcement those waterworks that fail to return to compliance in a timely manner. In 2025, ODW finalized revisions to the Enforcement Manual to provide additional structure to the enforcement program and improve guidance for ODW staff.[9] ODW's enforcement program is also exploring additional improvements outside of the Enforcement Manual, such as focusing on the clarity of communications with the regulated community, optimizing communications within ODW, and identifying best practices for overseeing and tracking compliance.

## A. Policy and Procedure Updates

VDH continues to develop, implement, and improve its enforcement program. In 2020, ODW published an Enforcement Manual to reflect ODW's mission to protect public health and help ensure that all waterworks in Virginia provide a safe and adequate supply of drinking water. The manual provides guidance on monitoring and tracking noncompliance, elevating noncompliance for enforcement, and ensuring waterworks return to compliance in a timely and appropriate manner. The revised Enforcement Manual includes clearer processes and timelines for review and action on compliance and enforcement issues by ODW. The revised Enforcement Manual also incorporates ODW's State Violation Scoring System (SVSS), which assists ODW in targeting compliance and enforcement actions for state-only (non-federal) regulatory violations.[10]

In addition to ongoing process improvements internally, the Office of the State Inspector General (OSIG) audited ODW during 2020, issuing a performance audit report in June 2021. The report included several findings and recommendations related to the enforcement program. Completing the revisions to the Enforcement Manual incorporates improvements reflecting feedback from the OSIG audit.

ODW's capacity to fully address OSIG's findings and related recommendations was significantly affected in 2021 and 2022 by budgetary challenges that impacted, among other things, ODW's ability to fill certain vacant positions and hire staff for new positions. While ODW continues to be faced with budgetary challenges, in Fiscal Year 2026, ODW received additional state funding that allowed it to hire 16 new staff positions so ODW can maintain a highly effective drinking water program. One of the new positions is a policy analyst within the Division of Compliance, Enforcement and Policy, to help improve ODW policies and processes, including those focused on compliance and enforcement.

As new rules and regulations are issued, ODW's Compliance, Enforcement and Policy staff work closely with individuals from EPA and other ODW staff to develop and implement new policies and procedures to guide and train ODW staff. Additionally, ODW reviews existing policies and procedures on a regular basis to determine how they can be improved.

## B. Strategic Planning

ODW actively engages in strategic planning to identify needs, develop objectives, and build program performance. ODW's enforcement program has focused on reducing the number of waterworks that

[9] The revised Enforcement Manual went into effect in 2026.
[10] The data in this Annual Compliance Report concerns federal violations.

qualify as serious violators under the ETT, and for those that appear as serious violators, to have many of them quickly back in compliance or under formal enforcement.

New regulations, emerging contaminants, and aging infrastructure present continuing challenges that ODW must confront. ODW is also preparing for additional compliance and enforcement challenges presented by new federal rules, such as the Lead and Copper Rule Revisions and Lead and Copper Rule Improvements, the Consumer Confidence Report Rule Revisions, and the PFAS Rule. The strategic plan for the enforcement program allows ODW to focus on near- and long-term goals based on needs and resources, set schedules for achieving those goals, and determine how best to utilize informal and formal enforcement measures to respond to these sorts of continuing challenges.

In 2025, of the 15 largest waterworks in Virginia, not one received a federal violation, although there remains lurking threats due to aging infrastructure that may be unidentified or unaddressed. ODW is attempting to identify more of these potential problems during sanitary surveys and work with the waterworks owners to fix the problems before they become serious. Additionally, water loss, water main breaks, boil water advisories, power outages, and inadequate reliability may not always result in a health-based violation but may require significant investment in the waterworks' infrastructure to provide good water quality and to prevent future harm to public health. Among things ODW is continuing to focus on when conducting sanitary surveys is looking more closely at reliability concerns. Cybersecurity attacks have become more of a threat, so ODW has also spent time focusing on providing resources and education to enable waterworks to better protect themselves and the safety and reliability of the water they provide.

Achieving adequate reliability may be especially challenging for very small community and non-transient non-community waterworks that tend to have fewer resources. Additionally, very small waterworks may have more trouble attracting qualified licensed operators, especially when the waterworks is in a remote location where there may be fewer operators available. ODW employs a teamwork approach, where central office enforcement staff and field office staff frequently engage with ODW's capacity development staff, including during monthly enforcement meetings, to discuss what assistance and resources can be provided to help a waterworks address violations early in the process. ODW has also been employing enforcement of reliability standards in the Regulations as a basis to require certain upgrades and repairs to address infrastructure concerns. To increase compliance with monitoring and reporting requirements, the ODW Division of Data Management, Permitting, and Sample Verification has implemented an automated sampling reminder process where ODW sends emails to waterworks notifying them when certain required samples have not yet been received by ODW. It has been found to prompt calls by the waterworks owners and operators to quickly resolve monitoring noncompliance. ODW staff also reach out to certain waterworks proactively to remind them not to wait until the end of the monitoring period to sample.

ODW continues to use enforcement tools to achieve compliance. Consent orders have been effective at achieving compliance and many violators are willing to agree to a corrective action plan and schedule for compliance, as well as a civil charge, for past noncompliance. As a result of the considerable compliance and technical assistance that ODW offers while trying to return a waterworks to compliance, waterworks owners seem to perceive a sense of fairness when presented with a proposed consent order. In turn, consent orders help waterworks owners qualify for funding in many cases to help them return to compliance. Due to ODW's success in having waterworks owners agree to consent orders, on only rare occasions must ODW proceed to an administrative hearing and seek issuance of a unilateral special order to compel compliance. In 2025, all waterworks owners who were offered a consent order agreed to the order.

In 2025, ODW did not limit its formal enforcement efforts to administrative orders. ODW worked with Virginia's Office of the Attorney General in seeking further enforcement against a waterworks owner who failed to comply with an existing administrative order and, separately, failed to adequately maintain the system which resulted in a significant failure of the distribution system. The owner did not comply with the subsequent court order and ODW has been unable to find someone interested in taking over ownership of the system. The owner not complying with the court order resulted in the owner paying a large penalty that is being used, in combination with EPA funding that VDH is administering, to assist homeowners in having private wells drilled so the waterworks can be closed. The court case is ongoing.

Each quarter, CEP staff meet with EPA Region 3 staff to discuss serious violators as identified by the most recent ETT report, progress on bringing those systems back into compliance with the Regulations, and possible formal enforcement. Typically, EPA Region 3 staff will provide assistance and support regarding the noncompliant cases and acknowledge if ODW's plan to achieve compliance for each case is acceptable. A special meeting may occur if a situation regarding a water system is critical and CEP feels it is appropriate to alert EPA Region 3 and obtain feedback prior to the next quarterly meeting.

While most waterworks comply with the Regulations, very small and small waterworks represent a disproportionate share of the violations and often lack the technical, managerial, and financial capability to address violations. ODW is focusing on measures that it can take to help ensure that customers at small and very small waterworks receive equal access to a safe and adequate drinking water supply, regardless of waterworks size or location. This has included involving ODW's capacity development staff in monthly enforcement meetings.

Equal access to drinking water remains a priority given ODW's mission to ensure that Virginia's waterworks provide safe and adequate drinking water to their customers. In 2025, ODW used Virginia's Equitable Access to Drinking Water Fund to incentivize the consolidation or regionalization of underperforming waterworks. This effort is aimed at reducing health violations, improving economies of scale, and addressing resilience and reliability at small and disadvantaged systems, which will help equalize access to safe and adequate drinking water.

Lastly, ODW continues to explore ways to improve its comprehensive oversight of waterworks across Virginia. To this end, ODW continues to digitize its files, and is implementing a document management system combined with digital recordkeeping so ODW staff can access records remotely, easily share records among staff in different locations, and eliminate reliance upon physical files that are stored at individual field offices.

# VI. Conclusion

ODW provides exceptional compliance and technical assistance to waterworks. Compliance and technical assistance build trust and partnership between ODW and the waterworks owner and operators that often returns violations to compliance as quickly as possible with no further action needed. Waterworks that require enforcement action to achieve compliance represent only a small fraction of waterworks in Virginia and they tend to serve fewer people. For the fraction of waterworks that require formal enforcement action, administrative orders have successfully resulted in cooperation by the waterworks owners to take actions as needed to return to compliance.

ODW uses real-time data and proactive enforcement policies to identify and attempt to resolve noncompliance before the waterworks appears on the ETT report as a serious violator. ODW uses the

Enforcement Targeting Tool Assistant (ETTA) database weekly to update compliance data and identify waterworks with new or ongoing violations for potential enforcement. The Enforcement Manual identifies tools for addressing noncompliance in a uniform, structured, and timely manner. Guidelines on referring a waterworks for enforcement, drafting administrative orders, and assessing civil penalties clarify the process for escalating the enforcement response to noncompliance.

Additionally, ODW's approach to enforcement combines the local expertise of ODW field office staff with CEP staff's focus on consistency in process and outcome so waterworks throughout Virginia are treated similarly. The revised Enforcement Manual better defines the roles of the field office and CEP when it comes to addressing compliance and enforcement issues, and the relevant timelines in moving through the compliance and enforcement process to resolve instances of noncompliance.

Based on the data presented in this report, ODW will continue to evaluate how it can reduce the number of violations, especially at transient non-community and community waterworks, which have proportionately more violations than non-transient non-community waterworks. ODW will also evaluate how best to get waterworks to return to compliance more quickly. ODW's effort in this regard will be aided by the new policy analyst position within CEP.

The ODW field offices use different methods to engage with waterworks owners to attempt to prevent violations before they occur. Due to ODW field office staff's knowledge of the waterworks and personnel, and existing relationships with the waterworks, field office staff can determine the best means of engaging with a waterworks to maintain compliance and quickly address violations. Meanwhile, ODW is implementing sending monitoring and reporting reminders by email.

In 2025, ODW staff continued to emphasize communication within ODW related to enforcement. This included continuing to involve capacity development staff in monthly enforcement meetings between CEP staff and field office staff; engaging FCAP staff about enforcement matters as needed; collaborating with ODW's emergency response staff on urgent public health matters, which often include a regulatory compliance aspect; CEP staff visiting field offices to discuss processes, challenges, and ideas; and CEP conducting a training session for the field offices' compliance specialists. By taking advantage of the full range of expertise within ODW and not just relying on staff that strictly deals with enforcement, ODW aims to achieve higher rates of compliance, return systems to compliance more quickly, and create a more dependable and safer drinking water supply for Virginia.

# Obtaining a Copy of the 2025 Annual Compliance Report

As required by the SDWA, Virginia has made the 2025 Annual Compliance Report available to the public. Interested individuals may review a copy of the 2025 Annual Compliance Report for Virginia by accessing the VDH, Office of Drinking Water's website at:
