

PREVENT CHILDHOOD LEAD POISONING

Childhood lead poisoning is the most preventable environmental disease among young children. There is no safe blood lead level.

Lead is harmful to a child's health.

It can cause...

Damage to the brain and nervous system

Slowed growth and development

Learning and behavior problems

Hearing and speech problems

Common sources of lead exposure:

- Chipping and peeling paint from homes built before 1978
- Water from lead pipes
- Imported toys and jewelry
- Imported cosmetics
- Soil
- Pottery and ceramics
- Imported candy and candy wrappers

Follow these quick and easy steps to stay lead safe:

- Wet-wipe and wet-mop windowsills and around home entrances
- Wash children's hands and toys regularly
- Do not let children play in bare soil. If they do, immediately wash their hands and clothes
- Run water for 60 seconds before use, and cook with cold water only
- Cook nutrient dense meals, high in calcium, iron, and vitamin C
