

Healthy Brain Virginia Webinar Virginia Memory Project

Join us as we discuss the Virginia Memory Project, its impact on brain health and how we can work together towards a dementia-free Virginia.

The Virginia Memory Project is a multi-purpose dementia registry:

- Focusing on brain health, memory, and caregiving,
- Collects state data related to dementia diagnoses, and individual responses to the survey,
- Ensures data is inclusive of all those who are impacted,
- Helps develop resources and education needed to address ADRD while also providing a pathway to care for those in need.
