Persons with COVID-19 who have severe to critical illness or who are severely immunocompromised might need to stay home longer than 10 days. These persons can consider using a test-based strategy to discontinue isolation, in consultation with an infectious disease expert.

If you had COVID-19 symptoms and were directed to care for yourself at home, you can leave your "sick room" and home after these 3 things have happened:

- At least 10 days have passed since symptoms first appeared, and
- At least 24 hours with no fever without fever-reducing medication, and
- Other symptoms have improved.*

*Note that loss of taste or smell might persist for weeks or months and this should not delay the end of isolation

If you tested positive for COVID-19 and never had any symptoms and were directed to care for yourself at home, you can leave your "sick room" and home if:

- At least 10 days have passed since the date of your first positive COVID-19 diagnostic test, and
- You continue to have no symptoms since the test.

December 7, 2020
If you had close contact with a person who has COVID-19 while they were contagious*, watch for symptoms and follow all recommendations (e.g., wear a mask, watch your distance, and wash your hands often) for 14 days after last exposure.

Close contact includes:
- Being within 6 feet of a person who has COVID-19 for a total of 15 minutes or more over a 24-hour period, or
- Having exposure to respiratory secretions (e.g., being coughed or sneezed on; sharing a drinking glass or utensils; kissing) from a person who has COVID-19, or
- Providing care for a person who has COVID-19, or
- Living with a person who has COVID-19

* A person with COVID-19 is considered to be contagious starting from 2 days before they became sick (or 2 days before test specimen collection if they never had symptoms) until they meet the criteria to discontinue isolation.

**If you are able to have complete separation from the person in your house with COVID-19 (this means no contact, no time together in the same room, no sharing of any spaces, such as same bathroom or bedroom), then follow timeframe for non-household contact.**

### HOUSEHOLD CONTACTS
VDH recommends that you quarantine (stay home) while the infected person is home and for 14 days after the person has been released from isolation (because exposure is considered ongoing within the house)**.

If you are not able to stay home for 14 additional days and do not have symptoms, you may leave home earlier:
- After 10 days without testing; or
- After 7 days with a negative PCR or antigen test performed on or after Day 5.

### NON-HOUSEHOLD CONTACTS
VDH recommends that you quarantine (stay home) for 14 days after the date of last close contact with the person infected with COVID-19.

If you are not able to stay home for 14 days and do not have symptoms, you may leave home earlier:
- After 10 days without testing; or
- After 7 days with a negative PCR or antigen test performed on or after Day 5.

Based on CDC guidance for Community-Related Exposures, Quarantine if You Might Be Sick.

### When it is safe to be around others: ending quarantine for exposed persons

#### Healthcare Personnel

Asymptomatic healthcare personnel (HCP) with potential exposure to patients, visitors, or other HCP with COVID-19 may be assessed for exposures and advised on work restrictions for 14 days after their last exposure. Exposures include close contact when appropriate PPE is not used, especially for aerosol-generating procedures. If staffing shortages occur, it might not be possible to exclude exposed HCP from work; see [CDC strategies to mitigate HCP staffing shortages](https://www.cdc.gov/hcp/COVID-19/transportation.html).

#### Critical Infrastructure Workers

VDH recommends that personnel filling essential critical infrastructure roles (as defined in [CISA Framework](https://www.cisa.gov/topics/critical-infrastructure)) **quarantine for 14 days** after their last exposure. If you are not able to stay home for 14 days and do not have symptoms, you may leave home earlier:

- After 10 days without testing; or
- After 7 days with a negative PCR or antigen test performed on or after Day 5.

Exposed critical infrastructure workers, except for education sector workers, may continue to work if they do not have any symptoms and additional precautions are taken to protect them and the community. Follow VDH recommendations for [critical infrastructure workers (non-healthcare) potentially exposed to COVID-19](https://www.vdh.virginia.gov/coronavirus/who/essential-workers/).
