You Should Be Tested for COVID-19 if:
- You develop symptoms related to COVID-19. See a list of possible symptoms here.
- You had close contact with someone with COVID-19.
- If you have recovered from COVID-19 and do not have any new symptoms, you may not need to be tested again. See here for more information.
- A healthcare provider or the local health department recommends you get tested.

Call your healthcare provider or Student Health to arrange for testing and see the community list of COVID-19 Testing Sites in Virginia. You should isolate (stay home) while waiting for your test results.

After Receiving COVID-19 Test Results
If your test is positive, you should remain in isolation until you have met ALL of the following criteria:
- It has been 10 days since the onset of your symptoms or if you never developed symptoms, 10 days have passed since the first positive test.
- You have not had a fever for at least 24 hours without using fever-reducing medication.
- If you developed symptoms, those symptoms have improved*.

If your test is negative:
- Continue to quarantine for 14 days if you had close contact with someone with COVID-19. If you are not able to quarantine for 14 days and do not have symptoms, you may end quarantine earlier: after 10 days without testing OR after 7 days with a negative PCR or antigen test performed on or after Day 5. If you end quarantine early, you should still monitor for symptoms and follow all recommendations (e.g., wear a mask, watch your distance, wash hands often) for the full 14-day period.
- If you have recovered from COVID-19 or been fully vaccinated for COVID-19, you might not need to quarantine, but you should still monitor for symptoms for 14 days and continue to wear a mask, watch your distance, avoid crowds, and wash your hands. See www.vdh.virginia.gov/coronavirus/local-exposure/ for more information.
- Ask your healthcare provider if additional testing and isolation are recommended if you were tested because you had symptoms.

*Note that loss of taste or smell might persist for weeks or months and this should not delay the end of isolation.

If You Develop COVID-19 Symptoms:
- Call your healthcare provider's office or Student Health to arrange for COVID-19 testing. Testing is also available throughout Virginia at COVID-19 Testing Sites.
- Tell those who you had close contact with recently if you become ill, so that they can monitor their health.
- Seek medical attention if you develop any of the following emergency warning signs or if your symptoms get worse: worsening cough, difficulty breathing, pain or pressure in the chest, new confusion, bluish lips or face, inability to wake up or stay awake.
- If you need medical attention, call the healthcare provider's office, Student Health, or hospital ahead of time to inform healthcare personnel you are under isolation/quarantine for COVID-19.
- If you need to call an ambulance, inform the 911 dispatcher and paramedics that you are under isolation/quarantine for COVID-19.
If you need to isolate or quarantine, notify your college's designated point of contact, as they may be able to arrange isolation or quarantine housing for you and provide you with services (meal delivery, cleaning supplies, laundry, etc.). Stay in your designated isolation or quarantine housing and away from others as much as possible. **ALWAYS** wear a mask that covers your nose and mouth if you need to leave your housing. You should not leave your housing except for essential trips such as medical appointments or picking up take-out food if no one is available to deliver it to you. If you must travel, take a private vehicle. Do not use public transportation, ride-shares, or taxis. Work with your school's designated point of contact to arrange isolation or quarantine housing. Stay in your designated housing as much as possible. Minimize the number of times you leave your room or anyone else enters your room. Minimize contact with people you live with as much as possible, especially those at high risk for serious illness. Do not allow visitors into your residence. If possible, designate a specific restroom for yourself. Wear a mask when you need to use the restroom if you are sharing with other housemates or with others in your dorm. Clean and disinfect shared, “high-touch” surfaces (e.g., doorknobs, counters, toilets, faucets, keyboards, keys, TV remotes, phones) daily. You should not prepare or serve food or drinks for anyone else. When you must leave your designated room, ensure you keep six feet of distance between yourself and others and that everyone wears a mask. Wash hands frequently for at least 20 seconds or use hand sanitizer with at least 60% alcohol content. Do not share personal items, especially those that could come into contact with bodily fluids (e.g., cups, plates, utensils, towels, bedding). After use, wash these items with warm water and soap or detergent. If you or anyone you live with develops symptoms or tests positive, ensure the individual who tested positive notifies the school and refer to the complete VDH guidance for Living with Someone with COVID-19.

If you test positive, Virginia Department of Health (VDH) might call to check on you, discuss who you may have been around, and ask where you have spent time while you were contagious. VDH staff will ask you to stay at home away from others and isolate, if you are not doing so already. It is important that you answer this call and help the health department slow the spread of COVID-19 in your community. Your personal and medical information will remain confidential. This means **your information will be kept private and will not be shared with your contacts or your school**, unless you give permission.

VDH staff might not be able to call everyone. If you test positive, you should immediately notify your contacts, even if you do not receive a call from VDH.
