You are a close contact to someone who has known COVID-19, have no current symptoms of illness, and have a positive COVID-19 antigen test.

You should isolate until you are no longer contagious.

People with asymptomatic COVID-19 are considered contagious until the following 2 things have happened:

- At least 10 days have passed since the date your specimen was collected for your first positive COVID-19 diagnostic test,
- You continue to have no symptoms since the test.

If you develop symptoms, you should contact your healthcare provider.

What do your results mean? You have COVID-19. You are asymptomatic, but you may develop symptoms. You could infect others.

What should you do? What does it mean to be in “isolation”?
You are a close contact to someone who has known COVID-19, have no current symptoms of illness, and have a positive COVID-19 antigen test. You should isolate until you are no longer contagious. People with asymptomatic COVID-19 are considered contagious until the following 2 things have happened:

- At least 10 days have passed since the date your specimen was collected for your first positive COVID-19 diagnostic test,
- You continue to have no symptoms since the test.

If you develop symptoms, you should contact your healthcare provider.

Isolation is the separation of people with COVID-19 from others. People in isolation need to stay home and separate themselves from others in the home as much as possible.

What do your results mean?

You have COVID-19. You are asymptomatic, but you may develop symptoms. You could infect others.

What should you do?

You should isolate until you are no longer contagious.
