### **CRADDOCK CREEK Growing Area # 083 Accomack County Shoreline Sanitary Survey**

**Date:** 7 June 2023

**Survey Period:** March 8, 2023 – May 20, 2023

**Total Number of Samples Taken and Properties Surveyed:** 57

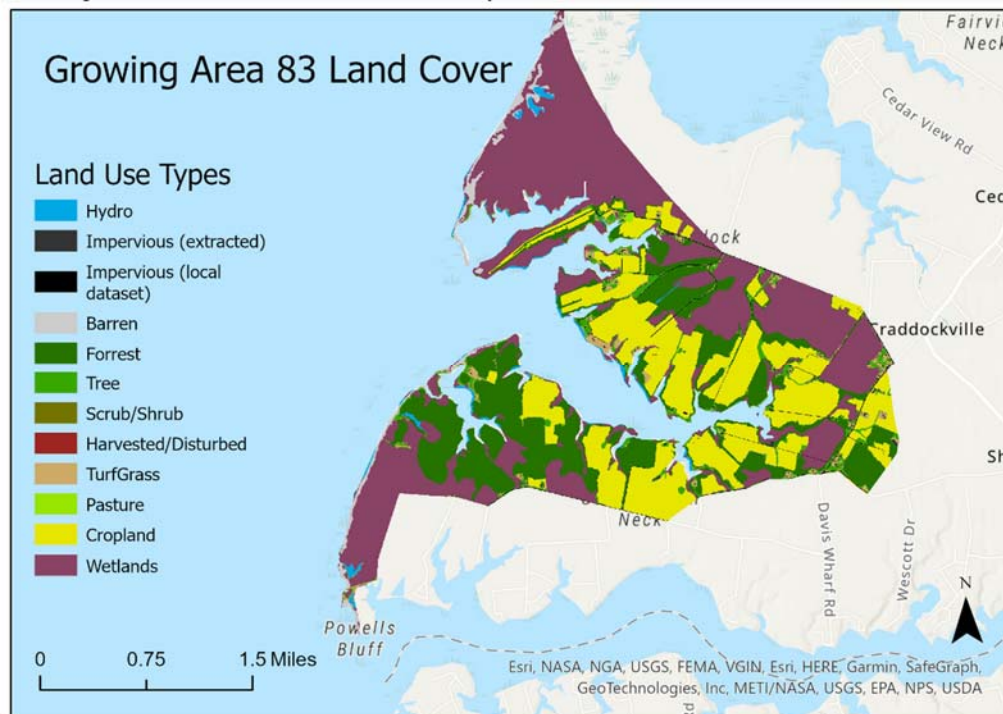

**Surveyed By:** T. Charnock, R. Snead, & I. Geeson

### **SECTION A: GENERAL**

This survey area extends from Reference point 83 at Milbys Point to Reference Point 84 at Powells Bluff, including the Chesapeake Bay shoreline between these points, Back Creek, Craddock Creek, Bull Cove, and all of their tributaries.

The Craddock Creek watershed falls within Accomack County. The terrain is relatively low, varying from low marsh along the bay to a 30' elevation along the eastern headwaters. The population in Accomack County remained stable over the last census period at around 33,000 residents. Data from 2021 indicate there are 22,044 housing units. In 2022, 207 building permits were issued. <https://www.census.gov/quickfacts/fact/table/US/PST045221>

Within Growing Area 83, there are 167 land parcels. Land Cover data are shown below.

Meteorological data indicated that a total of 5.53" of rain fell during the survey period. A monthly breakdown of rainfall (inches) is as follows:

Date Range	Cumulative Rainfall (inches)	Average Monthly rainfall 2012-2022
3/8/23 – 3/31/23	0.8"	NA (partial month)
4/1/23 – 4/30/23	2.99"	3.23"
5/1/23 – 5/20/23	1.74"	NA (partial month)

For this survey, nearshore seawater stations were established to survey the full extent of navigable waters beyond routine classification stations. Stations were created in closer proximity to the shoreline and farther upstream than routine stations and are intended to evaluate drainage entry points of potential point and nonpoint source pollution. Station data were analyzed to compare relative concentrations of fecal indicator bacteria within the waterway to identify potential onshore sources of contamination.

Hydrographic data, sampling times and range of enterococcus concentrations measured are shown in the table below. Maps of the enterococcus sampling are shown at the conclusion of this report.

Growing Area # 83 Nearshore Sampling						Rainfall in inches	
Sample date	High Tide*	Ebb Current **	Sampling time	Enterococcus range (MPN/100ml)	Day of	Previous 24 hours	Previous 7 days
3/20/23	10:39	12:58	10:46-11:57	9-62	0	0	0.46

5/18/23	10:45	12:38	11:00-11:42	9-52	0	1.12	1.29
Total rainfall for nearshore sampling period 3/20/23 – 5/18/2023						5.01"	

\* High Tide Estimated from Occohannock Creek, NOAA Station ID #1919.

\*\* Slack Ebb Current Estimated from Nassawadox Point Station ID #4616.

Information in this report is gathered by and primarily for use by the Division of Shellfish Safety, Virginia Department of Health, in order to fulfill its responsibilities of shellfish growing area supervision and classification. However, the data are made available to various agencies participating in shellfish program coordinated activities or other interested parties.

Copies of VPDES permits and inspections are available at the Department of Environmental Quality.
