*Interim Listings will be used until a final test protocol is established.

This list is based on NSF 245, Maryland's website for [Best Available Technology](#), and other data sources that have been submitted for consideration. Manufacturers should contact Ryder Bunce, Technical Services Engineer, at Ryder.Bunce@vdh.virginia.gov to be considered for the interim list. The list will be updated as needed. **Note that only the main model from the NSF 245 list is provided in most cases and not all the variations (concrete, poly, etc.) for brevity sake. All models certified under NSF 245 are BMP compliant for flows $\leq 1,000$ gpd.** See the NSF 245 listings at <http://info.nsf.org/Certified/Wastewater/Listings.asp?TradeName=&Standard=245> and <https://gctla.com> for the complete list. Although these listings include treatment units for flows greater than 1,000 gpd, VDH general approval is limited to flows less than or equal to 1,000 gpd in accordance with 12VAC5-613.
