

MPOX VACCINES: WHAT YOU NEED TO KNOW

Get Your Shot: Anyone Exposed to Mpox or Thinks They're at Risk Can Get the Vaccine

- You do not have to give personal risk information to get the vaccine
- Vaccines are available at local health departments and other providers
- Medicaid and Medicare will cover the cost of the vaccine
- Most private insurance plans will cover the vaccine, call your health insurance provider to check
 - If you don't have insurance coverage, contact your local health department about low-cost or free mpox vaccine
 - Find your health department at vdh.virginia.gov/health-department-locator

Double Up: Both Doses Provide the Best Protection

- It's best to get your second dose 28 days after your first dose
- Even if it's been a while since your first dose— you can still get your second dose now
- Two weeks after your second dose is when you'll have the most protection against mpox

Just the Right Spot: Choose Where You Get the Vaccine

You can get it in your arm, upper back, or shoulder
