

Thinking of Light: Kasper

"We, the students of today - attending schools of yesterday, are being taught by teachers of the past, with methods from the middle ages, and asked to solve the problems of the future!"

- David Page, MS, NREMT-P
JEMS Conference 2001

Thinking of Light: Kasper

Defining The Problem

- ✦ Shortcomings of current EMS education and practice:
 - ✦ Heavily dogmatic
 - ✦ Heavy reliance on assessment and treatment algorithms
 - ✦ Heavily protocol-based
 - ✦ Favors rote-memorization over understanding
 - ✦ Minimal training in A&P and pathophysiology at the lower levels

Thinking of Light: Kasper

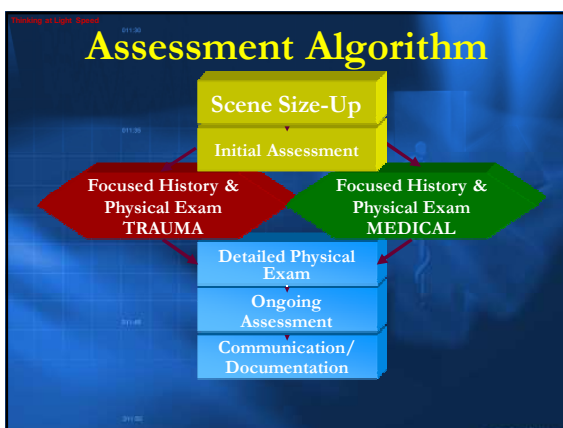

Dogma in EMS Education

- ✦ Spinal immobilization
- ✦ The Golden Hour
- ✦ Helicopter EMS
- ✦ Fluid resuscitation in shock
- ✦ ALS in cardiac arrest
- ✦ Many others

Thinking of Light: Ropes

Assessment and Treatment Algorithms

Are you using your book to do medicine?

Thinking of Light: Ropes

Protocols: Floor or Ceiling?

- ✦ In theory:
 - ✦ Least competent medic is required to do at least the same basic treatment steps as the most competent medic.
- ✦ In practice:
 - ✦ Most competent medic is forced to lower his standard of care to that of the least competent medic.

Most important words in an EMS protocol: "may" and "consider."

Thinking at Light Speed 011.00

1993 EMT-B Curriculum

- ✦ 110 clock hours
- ✦ Symptomatic treatment
- ✦ Little background or theory
- ✦ Precious little anatomy and physiology
- ✦ No pathophysiology
- ✦ Learning is limited to rote memorization of signs and symptoms
- ✦ Huge knowledge gap between EMT-B and higher levels

011.00

Thinking at Light Speed 011.00

1999 EMT-I and EMT-P Curricula

- ✦ Deeper and broader than previous curricula
- ✦ Expanded theory
- ✦ Strong emphasis on pathophysiology
- ✦ First curricula to directly address critical thinking
- ✦ Gave the instructor more freedom in teaching

011.00

Thinking at Light Speed 011.00

Levels of Competency

- ✦ Novices
 - ✦ Rigid adherence to taught rules or plans
 - ✦ Little situational perception (symptom management only)
 - ✦ No discretionary judgment
- ✦ Competent practitioner
 - ✦ Able to cope with pressure
 - ✦ Sees actions partly in terms of long-term goals and broader conceptual framework (disease management)
 - ✦ Follows standardized and routine procedures
- ✦ Expert practitioner
 - ✦ No longer relies on rules, guidelines or maxims
 - ✦ Intuitive grasp of situations
 - ✦ Uses analytic approaches only in novel situations or when problems occur

011.00

Thinking of Light: Speed 01:1:00

The Box

- ✦ Lecture and practical lab format
- ✦ Canned assessment and treatment algorithms
- ✦ Multiple choice exams
- ✦ Restrictive protocols
- ✦ Instructor cloning

Wason Cards

A

B

4

7

*"If a card has a vowel on one side,
 Which card(s) must you turn over to determine that statement is false?
 then it has an even number on the other side."*

01:1:00

Thinking of Light: Speed 01:1:00

False Dichotomy

- ✦ The false dilemma that occurs when answers are limited to only a few competing alternatives, when actually there are many.
- ✦ "Black or white" thinking.
- ✦ Promotes the idea that there is only one answer to a question, or one solution to a problem.

01:1:00

Thinking of Light: Revised 01/1/00

Outside The Box

- ✦ Student-directed learning
- ✦ Facilitation, not lecturing
- ✦ Case-based learning
- ✦ Problem based learning
- ✦ Team-based learning
- ✦ High fidelity simulators

01/1/00

Thinking of Light: Revised 01/1/00

Socratic Dialogue

- ✦ Teacher asks an open-ended question and solicits answers from the group.
- ✦ Students are encouraged to reflect and think critically.
- ✦ Teacher serves as facilitator
 - ✦ Pointing out logical fallacies
 - ✦ Reinforcing logical conclusions
- ✦ All students contribute to the discussion
- ✦ *Students* arrive at a consensus answer to the question.

01/1/00

Thinking of Light: Revised 01/1/00

Metacognition

- ✦ Coined by John Flavell in 1976
- ✦ "Learning to learn."
- ✦ Two elements:
 - ✦ Knowledge
 - ✦ Conscious
 - ✦ Intuitive
 - ✦ Learning goals
 - ✦ Strategy
 - ✦ Resource allocation
 - ✦ Learning plan
 - ✦ Evaluation and monitoring

01/1/00

Thinking in Light: Reason 011100

Critical Thinking

Critical thinking is the skillful application of a repertoire of validated general techniques for deciding the level of confidence you should have in a proposition in the light of the available evidence.

Austhink.org

Thinking in Light: Reason 011100

Promoting Critical Thinking

- ✦ Teaching methods that:
 - ✦ Are concept-based rather than procedure-based.
 - ✦ Focus on *using* key concepts, rather than just memorizing them
 - ✦ Utilize teacher as facilitator, not lecturer
 - ✦ Encourage active students rather than passive listeners

Thinking in Light: Reason 011100

Problem-Based Learning

- ✦ Establish the case
- ✦ Analysis of the problem by small groups
 - ✦ What do we know?
- ✦ Brainstorming
- ✦ Students formulate learning objectives
 - ✦ What do we need to know?
- ✦ Dissemination of findings
 - ✦ Possible explanations.
- ✦ Assimilation of results
 - ✦ Self-study toward learning objectives
- ✦ Identify areas for improvement
 - ✦ Integrate lessons learned into clinical practice

Thinking of Light: Spence 011.00

Zebra Practice!

- ✦ Divide class into small groups of 6-8
- ✦ Divide each group into two teams
- ✦ Have Team A design a scenario based upon one symptom, while Team B prepares to work the scenario
- ✦ Have Team A debrief Team B after conclusion of the scenario
- ✦ Swap team roles

Symptom-Based Games

60 minutes

011.00

Thinking of Light: Spence 011.00

Team-Based Learning

- ✦ Groups must be properly formed and managed
 - ✦ Avoid members with prior relationships
 - ✦ Cultural mix
 - ✦ Distribute member resources fairly
 - ✦ Form permanent groups

011.00

Thinking of Light: Speed 01:10

Team-Based Learning

- ✦ Make students accountable for:
 - ✦ Individual preparation (RAT)
 - ✦ Devoting time and effort to group assignments (Peer Assessment)
 - ✦ Interacting with each other productively

01:10

Thinking of Light: Speed 01:10

Team-Based Learning

- ✦ Team assignments must promote both individual learning and team development
 - ✦ Readiness Assessment Test
 - ✦ Peer Review
 - ✦ Final Evaluation

01:10

Thinking of Light: Speed 01:10

Team-Based Learning

- ✦ Students *must* receive frequent and immediate feedback
 - ✦ Timely feedback from RATs
 - ✦ Must be public
 - ✦ Students become invested in protecting the group "image."
 - ✦ Members know when they have failed to properly utilize their resources.
 - ✦ Timely feedback on team assignments

01:10

Thinking in Light: Spaces 011.00

Example TBL Exercise

"Develop an assessment and treatment protocol for acute pulmonary edema."

- ✦ Divide class into independent teams.
- ✦ At the conclusion of the exercise, combine the teams.
- ✦ Have them dissect each other's work, refine and build upon it.
- ✦ Have your combined team present the finished product.

011.00

011.00

Thinking in Light: Spaces 011.00

Summary

- ✦ Think outside the box of traditional education!
- ✦ Re-examine the way you evaluate students
- ✦ Empower your students through:
 - ✦ Problem-based learning
 - ✦ Case-based learning
 - ✦ Team based learning

011.00
