Basic Life Support • Patient Assessment • Hemorrhage Control • Fracture Management • Shock Prevention & Treatment

MOULAGE SCIENCES & TRAINING (MTS), a unique injury simulating technology, provides full immersion into combat/emergency medical situations involving severe trauma to the extremities—the kind of simulation experience that will adequately prepare medics for actual battlefield injuries and first responders for medical crises involving bleeding and severe tissue damage.

- Prosthetic tissue, wounds, and life saving skills training devices used in the training of medical professionals
- Merging latest special effects technology with medical and material sciences research to replace live tissue and training
- Physiologically based research and development program focused on providing enhanced training capabilities for medical professionals.
