SCOPES- ECHO

VAOEMS link: (<https://virginia.zoom.us/j/93647870168>)

When this ECHO meets:

- **Start date:** April 1, 2024
- **Session Title:** Heads-up: AI, Drones, CPR, and More
- **Duration:** one (1) hour.
- **Time:** 1900-2000 hours

What this ECHO will focus on

This ECHO will engage and instruct the modern EMS workforce and other healthcare team members in acute and non-acute best care practices for their local communities. This includes a focus on rural outreach and telemedicine implementation. Providers will gain knowledge of primary and secondary prevention of acute and chronic diseases and conditions.

Learning Objectives/Outcomes

1. Participants will collaborate with community care team members to increase capacity to provide best-practice care related to pre-hospital care, including case-based presentations.
2. Participants will learn to manage cerebrovascular and cardiovascular diseases.
3. Participants will gain knowledge of emerging epidemiological trends in their practice area.
4. Condition and symptom-specific sessions will provide increased ability to screen, test, and/or manage patient care and triaging related to stroke and other commonly encountered conditions.
5. Participants will engage in a supportive and collegial learning environment that provides knowledge and practice guidance.
6. Participants will receive an analysis of practical innovation, technology implementation, and policy considerations surrounding pre-hospital and emergency care.
7. Skills and practice related to cultural competence, mental health resilience, and crisis intervention will be explored.
