County Health Rankings & Roadmaps

Building a Culture of Health, County by County

Manassas Park City

Did You Know?

The [County Health Rankings and Roadmaps](#) (CHR&R) is a collaboration between the [Robert Wood Johnson Foundation](#) and the [University of Wisconsin Population Health Institute](#).

Over the last decade, CHR&R ranked the health of counties within states, providing a way to understand differences in health. This year CHR&R has replaced that method and introduced a [new sharper data-driven approach](#) that allows comparisons of a county's health with other counties, whether that's in the same state or across the nation.

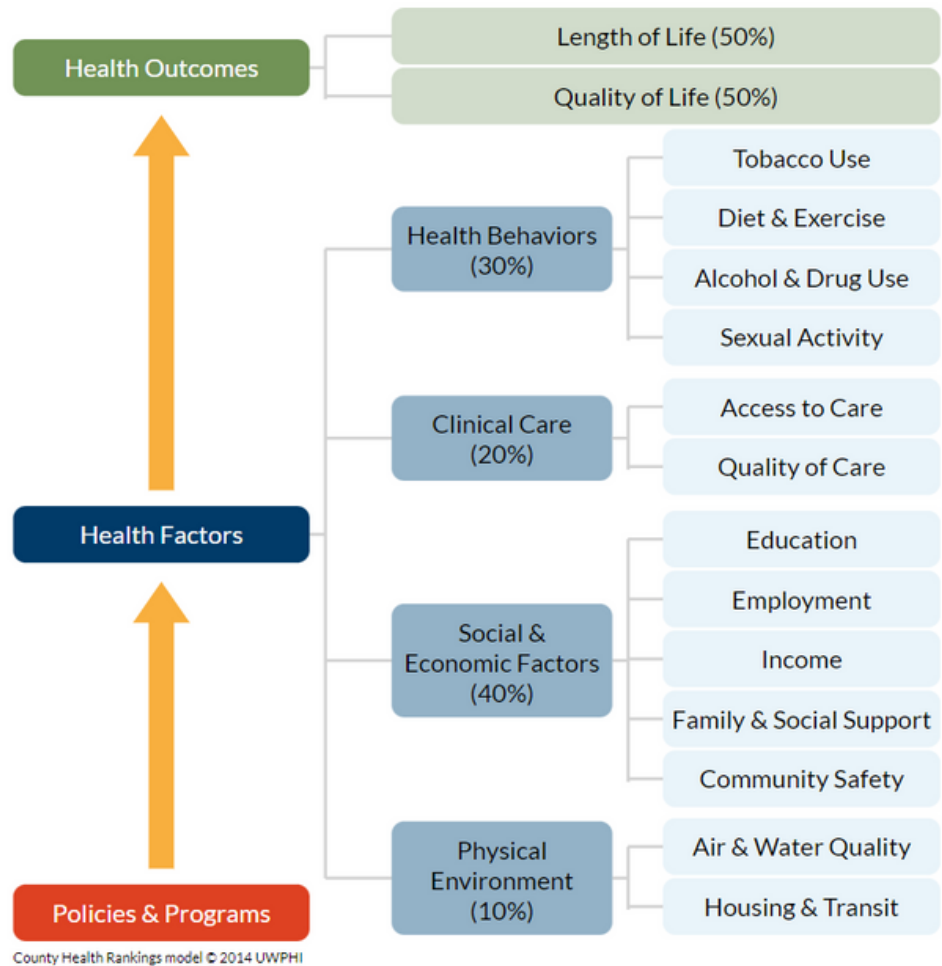

Within each County Health Snapshot there are **two new visuals for health outcomes and health factors**. The county-level measures are compiled from a variety of national and state data sources. All data is standardized and combined using scientifically informed weights.

Why Does This Matter?

Comparisons among counties provide context and show that **where you live, work, grow, and play can deeply affect your ability to live a healthy life.**

The CHR&R's model of health's measures aims to spark conversations and action to address the health challenges and gaps highlighted in these findings.

You can help make a sustainable change by learning, sharing, and advocating for investment in creating a healthier and happier community.

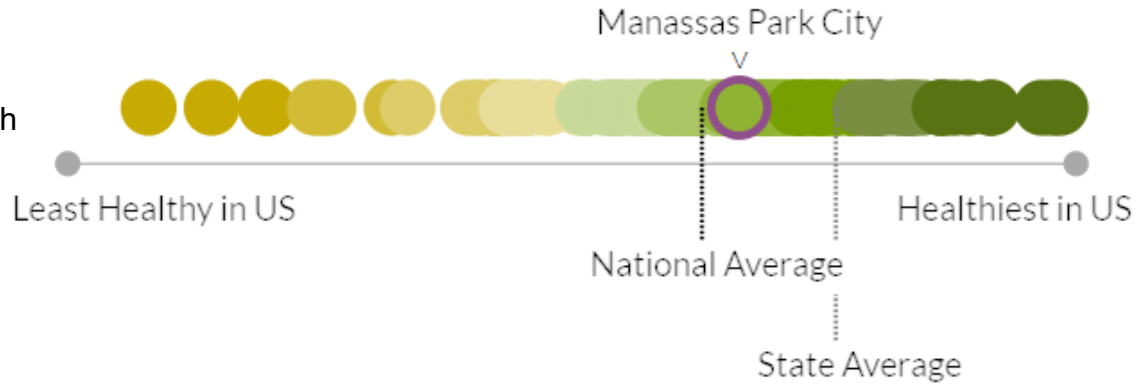

2024 County Health Snapshot

Health Outcomes

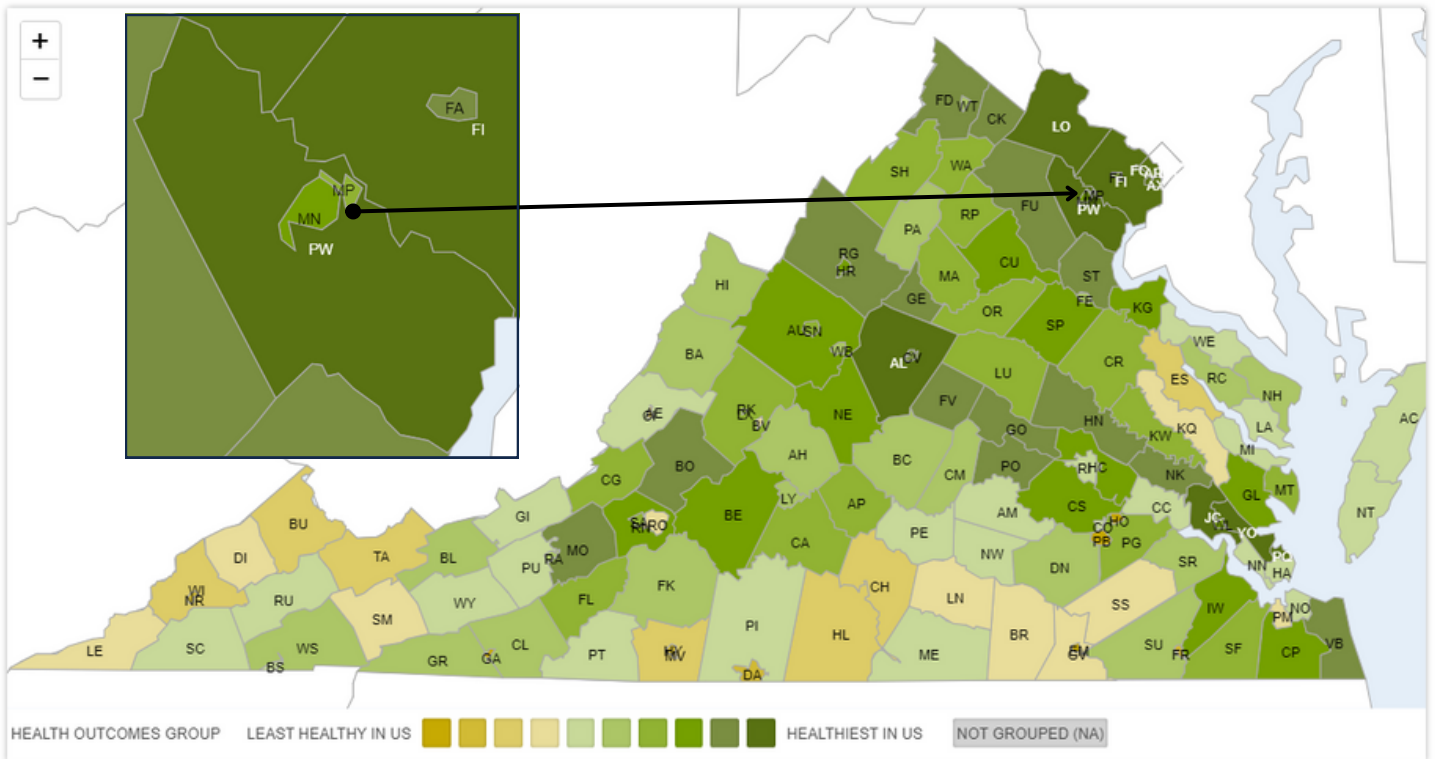

Health outcomes tell us how long people live on average within a community, and how much physical and mental health people experience in a community while they are alive.

Manassas Park City is faring worse than the average in Virginia for Health Outcomes, and better than the average county in the nation.
