## Facts about Community Water Fluoridation

## Waterworks Operators

- Virginia's Board of Health recommends that all public water systems in Virginia provide drinking water with fluoride at optimal levels.<sup>1</sup>
- The American Water Works Association supports Community Water Fluoridation (CWF) to help prevent tooth decay.<sup>2</sup> CWF is safe, helps prevent tooth decay, and saves money in dental treatment costs.<sup>3</sup>
- In the U.S., most (75 percent) public water systems are fluoridated.4
- The U.S. Task Force on Community Preventive Services examined 21 studies and concluded that fluoridated water reduces tooth decay by 29 percent among children ages 4-17.5
- Over 95 percent of Virginians served by public water systems receive water with fluoride that is added to reach the optimal amount.<sup>6</sup>
- Waterworks operators play a very important role in maintaining the optimal concentration of fluoride (0.7 mg/L) in the public water supply.<sup>7</sup>
