

THE MOST EFFECTIVE WAY TO REDUCE THE RISK OF FLU IS TO GET A YEARLY FLU VACCINE.

Anyone **6 months** and older, with rare exception, should get the flu vaccine **every year**

The **flu** vaccine and **COVID-19** vaccine can be given at the **same time**, if eligible and timing coincides

Flu is **still circulating**, so it's not too late to get your **flu vaccine**

THERE ARE OTHER WAYS YOU CAN HELP **STOP** THE SPREAD OF THE FLU AND **REDUCE** YOUR RISK FOR ILLNESS.

- **Wash your hands** frequently with soap and water for at least 20 seconds
- **Stay home** if you're sick
- Cough and sneeze **into your elbow**

Visit VDH's flu website for more information.
