Virginia Dementia Road Map Overview

📍
📍
📍
📍
📍

Wondering and Worried

- Is everything OK?
- Should I or my loved one be checked by a health care professional?
- Have I, or has my loved one, completed an annual cognitive evaluation?
- What if my loved one won't go to a health care professional?

Mild Cognitive Impairment (MCI)

- Where do we go to get memory loss checked out?
- How can I help my loved one with their memory and thinking?
- What can we do to promote our loved one's well-being?
- Can I share concerns privately with a health care professional?

Early-Stage Dementia

- Are there any medications, treatments or lifestyle changes that could help my, or my loved one's, memory and thinking?
- How can we help our loved one stay active and connected?
- Should I, or my loved one, still be driving?
- Is all our legal paperwork in order?

Mid-Stage Dementia

- What can I do to make the home safer?
- What can we do if our loved one won't stop driving?
- Where do we get help in coping with behaviors?
- What services might help and where do I find them?
- How can I make my loved one's life more enjoyable?

Late-Stage Dementia

- What can we do to promote quality of life?
- What kind of care is best for my loved one?
- What do we want in terms of medical care at the end of our loved one's life?

Dementia Road Map

Wondering and Worried

"Caregiving isn't just about the feeding, the changing of clothing, the medical appointments. It's about the special time you have with them. The one on one. It may not be a word spoken. It might just be holding hands. Let them feel your presence and your love."
—Janie S.

What should you expect in this stage?

You notice changes in your own or your loved one's memory, and thinking, but they may or may not affect daily life activities. For example, you may notice:

- Difficulty performing more than one task at a time.
- Difficulty solving complex problems or making decisions.
- Forgetting recent events or conversations.
- Taking longer to perform more difficult mental activities such as using the computer.
- Your loved one is likely concerned but may not discuss it. Other friends and family may or may not see or notice any changes.

Alzheimer's Disease and Related Disorders Commission

7

You may be wondering

- Is everything OK?
- Should I or my loved one be checked by a health care professional?
- Have I, or has my loved one, completed an annual cognitive evaluation?
- What if my loved one won't go to a health care professional?

Wondering and Worried

What you can do:

- Learn about normal changes with aging and those that indicate a need to get a check up. See the "10 Warning Signs" on page 23.
- If you're worried about changes in yourself, consider sharing your concerns with family, friends or your health care professional.
- Keep track of changes you notice. If your loved one doesn't bring it up, find the right time and a sensitive way to discuss these changes with them—get it out in the open.
- Ask your loved one to have a complete medical check-up. It's important to know if memory and thinking changes may be caused by something that could be treated or reversed. Even if not, it's best to know what you're dealing with.
- If your loved one is resistant to a medical check-up, enlist the help of trusted family or friends who may be able to encourage this.
- Call and ask your loved one's health care professional for the Medicare Annual Wellness exam (if they are on Medicare) that includes detection of cognitive impairment along with other screenings. Feel free to share with the professional what you've noticed either in person or in a letter.
- If you don't feel comfortable with your loved one's current health care professional, try to find a new one. Most primary care professionals can diagnose dementia. But

8

Virginia Dementia Road Map

- If you're looking for a specialist, contact the Alzheimer's Association to help identify providers in your area or check for a Memory Assessment Center on www.virginia.gov/dementia_resources.htm
- Consider enrolling in a clinical trial or research study on dementia at a university or memory clinic. You and your loved one may achieve our understanding of dementia.

ACTION STEPS

The following steps are important at this point:

- Obtain a medical assessment to find out what may be causing the problems.
- Complete health care planning documents. You and your loved one should have:
 - A Health Care Directive (also called a "living will" or "advance directive" regarding treatment preferences); and
 - A Durable Power of Attorney for Health Care, appointing a health care "agent."
- Complete a General Durable Power of Attorney document. In this document, you/your loved one appoints an "agent" to assist with financial and related matters.
- Complete an estate plan. Your loved one's estate plan may include legal documents such as a will or a trust that direct the disposition of their estate upon death.
- Have a family meeting to discuss what's happening and necessary next steps.

Dementia Road Map

Caring for the Care Partner

"My daughters, they kept saying, "Mom, you need to get some help to come in to help you." And I was like, "I'm okay. I'm okay, right now." But last month, two... three weeks now, I did seek help. And that gives me a chance to go out. Run errands and whatever. As a matter of fact, went to a movie Saturday evening. It was awesome."
—Rosie H.

Caring for yourself is one of the most important things you can do as a care provider for your loved one. When your needs are taken care of, your loved one will benefit too. You can do this by asking family members or friends to help out, taking time to do things you enjoy, using respite services such as adult day programs, or getting help from a home health care agency. Taking these actions may provide you with relief and can help prevent you from getting ill or depressed. Since the Covid-19 pandemic, many more services and supports are available virtually, such as virtual support groups, potentially giving you more options. Contact the agencies and referral sources on the next pages for more information.

Dementia Safety Information Toolkit

Safety Concerns for People Living with Dementia

Not all memory loss is due to dementia. Memory loss and/or confusion may be a result of many conditions, some of which are reversible. If you or someone you know has memory loss or confusion that's getting worse, it's important to talk with a health care professional about it. If it does turn out to be dementia, there are steps you can take to live well, and plan for a future with it.

Dementia affects each person differently, but symptoms typically include increasing memory loss, confusion, and disorientation. Changes in the brain can also impact how individuals interpret what they see, hear, feel, taste or smell, and their sense of time, place and judgment – each of which can impact safety.

The best environment for a person living with memory loss or dementia is one that helps them feel as independent and supported as possible. For people living with dementia wanting to stay at home, it's key to find the right balance between independence and safety – and to anticipate changes. With creativity and flexibility, it's possible to make adaptations that make the home safer and less stressful for all.

This "Info Kit" is a resource for family members and caregivers to assist in evaluating the home and taking steps to promote safety over the course of dementia. Materials highlight information and tips related to the following:

1. Home Safety
2. Falls Prevention
3. Driving
4. Wandering
5. Emergency Preparedness
6. Elder Abuse & Financial Exploitation

You may click on the links provided below each resource to view or print the information yourself. When a computer icon appears, the information is intended to be viewed online, and not in a printable format.

IT'S HELPFUL TO PLAN AHEAD: PUT SAFETY MEASURES IN PLACE BEFORE THEY'RE REALLY NEEDED

VIRGINIA DEPARTMENT FOR AGING AND REHABILITATIVE SERVICES

Dementia Friends

5 key messages about dementia:

- Dementia is not a normal part of aging
- Dementia is caused by diseases of the brain
- Dementia is not just about having memory problems
- It is possible to have a good quality of life with dementia
- There is more to the person than the dementia

VIRGINIA DEPARTMENT FOR AGING
AND REHABILITATIVE SERVICES

Dementia Friendly Communities

Dementia friendly communities foster the ability of people living with dementia to remain in community and engage and thrive in day to day living.

- A key component of dementia capability
- Led nationally by USAging
- AAAs often take a leading role or provide key support
- Statewide workshop in April 2018 to kick start Dementia Friendly Virginia
- LeadingAge Virginia and DARS leading the effort
- Can be one community, a county, a region

Why is brain health important?

Risk factors for dementia

An update to the *Lancet* Commission on Dementia prevention, intervention, and care presents a life-course model showing that 12 potentially modifiable risk factors account for around 40% of worldwide dementias

a life-course model showing that 12 potentially modifiable risk factors account for around 40% of worldwide dementias

DARS
VIRGINIA DEPARTMENT FOR AGING
AND REHABILITATIVE SERVICES

Risk factors for dementia

Early Life	(7%)	Less education (7%)
Midlife	(15%)	HEARING LOSS (8%) Traumatic brain injury (3%) Hypertension (2%) Alcohol (1%) >21 units per week Obesity (1%)
Later Life	(18%)	Smoking (5%) Depression (4%) Social Isolation (4%) Physical inactivity (2%) Air pollution (2%) Diabetes (1%)

Goal: Improve Virginia's Brain Health

- Revamping [Healthy Brain Virginia](#) website
- Incorporating brain health information into existing public health campaigns
- Supporting early detection and diagnosis
- Mini-grants to foster local innovation
- Supporting dementia education and training
