

FOCUS GROUP RESULTS SUMMARY OF THE LORD FAIRFAX HEALTH DISTRICT

Overview

With a total of 66 participants, 9 focus group sessions were held in the Lord Fairfax Health District to better understand the concerns, goals, and health needs of the community and its members. A variety of topics were discussed including health needs, transportation, cost/insurance, a mobile health unit, mental health, substance use disorder, smoking, maternal, and child health.

Focus groups were conducted in all localities of the Lord Fairfax Health District; Frederick/Winchester, Warren County, Page County, Shenandoah County, and Clarke County. This allowed us to hear the thoughts, opinions, and needs of those across all localities. The results of these focus groups are divided into overall district results and results of each specific locality.

Percentage of participants by locality

■ Frederick/Winchester ■ Warren ■ Page ■ Shenandoah ■ Clarke

The information received will allow us to better guide our efforts toward the specific issues that community members view as the 'problem areas' of their specific communities. Each locality has different priorities and needs, and those should be addressed with this in mind to have the most substantial impact on the locality. The grant funding (ARPA Targeted Community Outreach) that allowed us to conduct these focus groups, will continue to be used to address these specific concerns.

We hear you and we thank you for your participation.

Overall District Results

District-Wide Highlights:

All localities see a need for more supportive resources and face barriers towards accessing services.

These barriers primarily impact the most vulnerable members of the community. All localities feel a lack of medical providers, appointments, and mental health resources. Similarly, the cost of health care and insurance is expensive which causes many people delay or avoid going to the doctor if they can't afford the services. Needs regarding public transportation with expansive routes is clearly needed and would significantly improve people's access to available services. Many individuals state a major concern towards vaping among teens with a need for more education to teens and parents.

Transportation:

There are very few public transportation options in the district. Current bus and trolley routes don't go into rural areas/neighborhoods. If services are available, vehicles may not be ADA compliant or may have long walks to bus stops due to inconvenient placing.

Cost/Insurance:

The cost of health insurance is high and healthcare costs are high regardless of insurance status. If people can't afford it, people delay seeking care, which can cause a condition to worsen. The lack of providers impacts people's ability to access preventative healthcare.

Mobile Health Unit:

Participants agree a mobile health unit would benefit the district. They believe that it can address issues like transportation and access to healthcare services. It would also be beneficial to work in collaboration and alongside other organizations to provide services.

Mental Health and Substance Use Disorders:

There are very few services available in the area for treatment and medications. The services that are present have very limited scope of practice or have very long wait times. There are few support systems for those in treatment as well. More detox centers, transitional housing, and support for families are needed. Stigma is present in the district which discourages people seeking help.

Smoking and Tobacco Use:

Tobacco use is common within the district. Vaping is a major issue amongst the youth while cigarettes are more common with older generations. Many see it as a generational habit that they pick up from their parents. Education is needed to combat misinformation about vaping to youth and adults alike.

Maternal and Child Health:

Few localities have sufficient OBGYN care for its population's need. Many people drive to Winchester or Front Royal for OBGYN care. More robust pediatric healthcare services are needed in the localities.

- Many areas need better access to birth control & family planning resources
- There are few pediatric practitioners and daycare facilities/childcare facilities
- WIC appointments are difficult to get, despite the need for services

Page County

Highlights:

Page county is a large rural area with few to no resources in the area. Some resources are available in Luray, but many people live in very rural areas outside of Luray. The lack of public transportation causes further difficulties from those who live in rural areas trying to reach services. The cost of care is expensive, and Page County has few providers that serve the community. Very few specialty providers practice in the County. There are very few maternal and child health resources in the area, so people travel out of town for service.

Transportation:

Page County is spread out and other areas are very difficult to get to. No public transit makes it difficult to access services outside of a walking distance. Medicaid Transport is unreliable and causes many issues for people trying to use it to travel to and from appointments.

Cost/Insurance:

Cost prevents many people from seeking care to begin with, and they defer preventative care. Insurance is expensive and can be difficult to get and still have expensive copays. This causes people to use the ER for non-emergency care. Many people use the free clinic to access care, but many still cannot afford the medications.

Mobile Health Unit:

Participants think that it could be beneficial for Page County. People want to be able to access care in alternative locations and in ways that fits in their schedule. Participants see the potential for collaboration among service organizations to provide the most benefit to community members.

Mental Health and Substance Use Disorders:

There are very few services available in the area for treatment and medications, and few support systems for those in treatment. Treatment is often sought out of Page County and relies on the individual having reliable transportation. There is stigma in the community about seeking help and is harmful to those in the community.

Smoking and Tobacco Use:

Cigarettes are more common with the older generation. It is a generational habit that they often pick up from their parents. Vaping is a major issue amongst youths because it is widely accepted, convenient, and seen as having fewer consequences. Schools confiscate vapes, but do not provide support to the student with the possible addiction.

Maternal and Child Health:

There are very few resources in the area. Most people have to drive to Front Royal for OBGYN care. There are few pediatric practitioners and daycare facilities, and they often have long waitlists. This results in people avoiding seeking care for themselves and their children because of the difficulties associated with maternal and child health.

Moving Forward

The Lord Fairfax Health District has received so many wonderful ideas and valuable feedback during these sessions. The health district will take this feedback and use it to advocate for our community members. We are dedicated to protecting and promoting your well-being, and to create a healthier Virginia.

This information will be used to know what the most pressing issues in the community are and be used to specifically address these issues. Outreach events encouraging healthy habits in youth and adults alike, creating target marketing towards educating community members, and providing better avenues for accessing opportunities for healthy living are among some plans to engage community members throughout the district with health as a priority. **Our goal is to find solutions that work for each community, because each communities' needs are different.**

The Lord Fairfax Health District has great hopes of obtaining a mobile unit. We hope to be able to use this funding to acquire a mobile health unit this year to address transportation disparities in our more rural areas. Our goal is to provide health department services in areas farther from the health departments, with a focus on those who have difficulty accessing care or experience barriers to transportation and to our more vulnerable populations.

Please reach out to Katherine Schroeder (Katherine.Schroeder@vdh.virginia.gov / 540-722-3470) with any questions you may have about these focus groups or the plans to address community health issues.
