asked if the correct amount of water had been used for Individual #5's Mic Key button for the medication administration she opened Individual #5's clinical record and found the validated signed physician's order which noted: "Physician's Order G-Tube dated 02/24/16 noted the following: Medication Administration via G-tube. 1. Flush with 30 cc of water to ensure patency of the tube.; 2. Crush meds and mix with 15 ccs of water to ensure med will not block the tube.; 3. Give one med at a time.; 4. Flush with 30 cc of water when all medication is administered." After review of the signed physician's order the LPN stated: "MR/Assistant (name) did not follow the doctor's orders."

An interview was conducted on 03/09/16 at approximately 1:30 p.m., with the House Manager/Clinician II and Clinician II/QIDP (Qualified Intellectual Disabilities Professional). The Medication Pass issues were shared regarding the observations that were made and of the signed physician orders that MR/Assistant had not followed regarding the ordered amount of water to be used when administering medications to Individual #4 and Individual #5 for the initial and final water flushes.

An interview was conducted on 03/09/16 at approximately 2:05p.m., with the RN (registered nurse) Nurse Manager. The observations of the Medication Pass and the orders were shared and the RN. The RN agreed with the LPN that MR/Assistant #1 did not follow the signed physician orders regarding the amounts of water to be used for Individuals #4 and #5 regarding the initial and final water flushes. The RN was then asked about the qualifications of a MR/Assistant to be able to administer medications, especially . through a Mic Key Button. She stated: "Before a

MR/Assistant is able to administer any medications I personally instruct them and do observations myself of how medication is administered. I especially pay close attention to g-tube administration as it is a more difficult procedure and has more adverse outcomes if not followed correctly. MR/Assistant (name) is experienced and is checked off annually." The RN then submitted the facility's policy and procedure for Medication Administration

Review of the Medication Administration policy noted the following:

"3. Definitions: Medication Administration-is the safe physical application of medication into or onto the body, according to the physicians' orders, by licensed nursing personnel or unlicensed staff according to Delegation regulations. It shall include all processes necessary to assure compliance with the "5 Rights" of medication administration: Right Person, Right Medication, Right Dose, Right Route and Right Tim.

Delegation of Medication Administration-is the transfer of responsibility for administration for medication by a Registered Professional Nurse to trained, competent unlicensed personnel in selected situations according to the Virginia Nursing Practice Act. Medication administration by qualified personnel is required for all individuals with ID/DD (Intellectually Disabled/Developmentally Disabled) who do not possess the skills needed for assisted self-administration of medication or independent medication management."

An interview was to be done with the

clean gloves and prepared the ordered medications by crushing and mixing the medications individually. MR/Assistant #1 then attached the gastrostomy tube with a 60 cc (cubic centimeter) syringe, check residual stomach content and administered medications via tubing attached to the Mic Key button (a surgically inserted gastrostomy tube (G-tube) is a special tube in the stomach that will help deliver food and medicines https://www.nlm.nih.gov/medlineplus).

At 7:37a.m., it was observed part way through the administration of medications MR/Assistant #1 removed her gloves and proceeded to wash her hands. It was observed that after she applied soap to her hands she only rubbed her hands together for four (4) seconds, rinsed the soap off of her hands with water, dried them with paper towels and applied clean gloves. She then proceeded to administer medications.

At 7:42a.m., she removed her gloves and washed her hands. It was observed that after she applied soap to her hands she only rubbed her hands together for five (5) seconds, rinsed the soap off of her hands with water, dried them with paper towels and prepared for a treatment to the individual's MicKey button by putting on clean gloves. She did not clean the area around the site before she applied the ordered A & D ointment around the Mic Key button site with a toothette (a small sponge at the end of a hard paper applicator) and then applied a split 2 x 2 (2 inches by 2 inches) split gauze under the Mic Key button. She then proceeded to administer a physician ordered eye ointment without changing her gloves. The individual became resistant to the eye ointment and kept turning his head back

and forth. MR/Assistant #1 touched the individual's face multiple times as well as trying to open the individual's eyes. It was observed that after she removed her gloves, soap was applied to her hands, she rubbed her hands together for three (3) seconds, rinsed the soap off of her hands with water, dried them with paper towels and applied new gloves.

- 2. At 7:55a.m., after administering the ordered medications to a different individual, MR/Assistant #1 was observed removing her gloves, applied soap to her hands, only rubbed her hands together for three (3) seconds, rinsed the soap off of her hands with water, dried them with paper t towels and applied clean gloves.
- 3. 8:05a.m., after preparing the medication and applying the tubing to the a different individual's Mic Key button MR/Assistant #1 was observed removing her gloves, applied soap to her hands, rubbed her hands together for four (4) seconds, rinsed the soap off of her hands with water, dried them with paper towels and applied new gloves.

During the administering of this individual's medications the tubing became clogged and had to be removed and the medication was flushed out and the tubing reattached to the Mic Key button.

At 8:32p.m., MR/Assistant #1 completed the individuals medication pass, removed her gloves, applied soap to her hands, rubbed her hands for three (3) seconds, rinsed the soap off of her hands with water, dried them with paper towels which ended the Medication Pass observations. At no time during the entire Medication Pass of three different individuals was MR/Assistant #1 observed using hand sanitizer in place of hand

wasning.

An interview was conducted on 03/09/16 at approximately 11:25 a.m., with the house LPN (licensed practical nurse). The aforementioned observations of MR/Assistant #1's hand was technique was discussed with the LPN. When asked if the hand washing technique which had been observed was the policy of the facility she stated: "No. The MR/Assistant is experienced and should have known the correct technique." She went on further and stated: "She should also have removed her gloves and washed her hands prior to administering the ordered eye ointment."

An interview was conducted on 03/09/16 at approximately 1:30 p.m., with the House Manager/Clinician II and Clinician 11/QIDP (Qualified Intellectual Disabilities Professional). The Medication Pass observations of MR/Assistant #1's hand washing technique was shared. The House Manager/Clinician II stated: "MR/Assistant #1 (name) has been with the facility and should have used the appropriate technique."

An interview was conducted on 03/09/16 at approximately 2:05p.m., with the RN (registered nurse) Nurse Manager. The observations of the Medication Pass regarding MR/Assistant #1's hand washing technique was shared and the RN agreed with the LPN that the MR/Assistant did not use the proper technique and should have changed gloves and washed her hands properly and using a fresh pair of gloves before applying the individual's eye medication after using the same gloves that were used when she applied the ointment to the individuals stomach area and around the Mic Key button. The facility's policies
